(1) For fixed-rate agency mortgage-backed securities, Clearwater Analytics calculates prepayment speeds utilizing Mortgage Industry Advisory Corporation (MIAC) Mortgage Industry Medians (MIMs). MIMs are derived from a semi-monthly dealer-consensus survey of long-term prepayment projections. For other mortgage-backed, loan-backed, and structured securities, Clearwater utilizes prepayment assumptions from Moody's Analytics. Moody's applies a flat economic credit model and utilizes a vector of multiple monthly speeds as opposed to a single speed for more robust projections. In instances where Moody's projections are not available, Clearwater uses data from Reuters, which utilizes the median prepayment speed from contributors' models.

20. Fair Value Measurements

The fair value of the Company's financial assets and financial liabilities has been determined using available market information as of September 30, 2025. Although the Company is not aware of any factors that would significantly affect the fair value of the financial assets and financial liabilities, such amounts have not been comprehensively revalued since those dates. Therefore, estimates of fair value subsequent to the valuation dates may differ significantly from the amounts presented herein. Considerable judgment is required to interpret market data to develop the estimates of fair value. The use of different market assumptions and/or estimation methodologies may have a material effect on the estimated fair value amounts.

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability (exit price) in an orderly transaction between market participants at the measurement date. In determining fair value, the Company primarily uses the market approach which utilizes process and other relevant information generated by market transactions involving identical or comparable assets or liabilities. To a lesser extent, the Company also uses the income approach which uses discounted cash flows to determine fair value. When applying either approach, the Company maximizes the use of observable inputs and minimizes the use of unobservable inputs. Observable inputs reflect the assumptions market participants would use in valuing a financial instrument based on market data obtained from sources independent of the Company. Unobservable inputs reflect the Company's estimates about the assumptions market participants would use in valuing financial assets and financial liabilities based on the best information available in the circumstances.

The Company is required to categorize its financial assets and financial liabilities carried at fair value on the statutory statements of admitted assets, liabilities and capital and surplus according to a three-level hierarchy. A level is assigned to each financial asset and financial liability based on the lowest level input that is significant to the fair value measurement in its entirety. The levels of fair value hierarchy are as follows:

Level 1-Fair value is based on unadjusted quoted prices for identical assets or liabilities in an active market.

Level 2-Fair value is based on significant inputs, other than quoted prices included in Level 1, that are observable in active markets for identical or similar assets and liabilities.

Level 3-Fair value is based on at least one or more significant unobservable inputs. These inputs reflect the Company's assumption about the inputs market participants would use in pricing the assets or liabilities.

The Company uses prices and inputs that are current as of the measurement date. In periods of market disruption, the ability to observe prices and inputs may be reduced, which could cause an asset or liability to be reclassified to a lower level.

Inputs used to measure fair value of an asset or liability may fall into different levels of the fair value hierarchy. In these situations, the Company will determine the level in which the fair value falls based upon the lowest level input that is significant to the determination of the fair value.

The following table summarizes by level of fair value hierarchy the financial assets and liabilities measured and reported by the Company at fair value as of quarter-end:

The Company utilizes an independent actuary to review the adequacy of the Company's loss and loss expense reserves. Based on the assessment of the Company's reserves, the actuary concluded the amount carried on the statements of admitted assets, liabilities and surplus reflects an adequate provision for all unpaid losses and loss adjustment expenses obligations of the Company.

Activity in the liability for unpaid claims and adjustment expenses is summarized as follows:

The forgoing reconciliation reflects a decrease of reserves of \$766,042 as of September 30, 2025, and an increase in reserves of \$74,761 as of December 31, 2024. The changes in those reserves were primarily the result of differences in actual and assumed utilization and cost of dental services.
