

# UnitedHealthcare Plan of the River Valley, Inc.

Part II: Written Justification of Rate Increase

Iowa 2027 Individual Exchange Rates

June 8, 2026

## Part II: Written Description Justifying the Rate Increase

The following memorandum describes the key drivers of the rate changes of individual rates for UnitedHealthcare Plan of the River Valley, Inc. (“UHCPRV”). UHCPRV policies are individual medical plans offered in Iowa and are fully compliant with the Patient Protection and Affordable Care Act.

### Scope and Range of the Rate Increase

UHCPRV is filing 2027 rates for individual products. The proposed rate change is 11.77% and will affect 546 individuals. The rate changes vary between 9.66% and 12.53%. Given that the rate changes are based on the same single risk pool, the rate changes vary by plan due to plan design changes.

### Financial Experience of the Product

The premium collected in plan year 2025 was \$3,966,129. Incurred claims during this period were \$3,070,089 and UHCPRV expects payments of \$42,830 for risk adjustment. The loss ratio, or portion of premium required to pay medical claims, for plan year 2025 is 78.49%.

### Changes in Medical Service Costs

There are many different healthcare cost trends that contribute to increases in the overall U.S. healthcare spending each year. These trend factors affect health insurance premiums, which can mean a premium rate increase to cover costs. Some of the key healthcare cost trends that have affected this year’s rate actions include:

- **Increasing cost of medical services:** Annual increases in reimbursement rates to healthcare providers, such as hospitals, doctors, and pharmaceutical companies.
- **Increased utilization:** The number of office visits and other services continues to grow. In addition, total healthcare spending will vary by the intensity of care and use of different types of health services. The price of care can be affected using expensive procedures such as surgery versus simply monitoring or providing medications.
- **Higher costs from deductible leveraging:** Healthcare costs continue to rise every year. If deductibles and copayments remain the same, a higher percentage of healthcare costs need to be covered by health insurance premiums each year.
- **Impact of new technology:** Improvements to medical technology and clinical practice often result in the use of more expensive services, leading to increased healthcare spending and utilization.
- **Legislative & regulatory changes:** Premiums reflect an increase in projected average cost per member driven by adverse morbidity impacts associated with the expiration of enhanced APTCs and changes in federal premium subsidy eligibility.

### Changes in Benefits

Changes in benefits impact costs and therefore affect premium changes. Plan benefits are typically changed for one of three reasons: to comply with the requirements of the Affordable Care Act or state law, to respond to consumer feedback, or to address a particular medical cost issue to provide greater long-term affordability of the product.

The Affordable Care Act implemented requirements for the “value” that must be offered by plan designs in the Individual and Small Group markets. These are called “metal levels”. For a benefit plan to remain classified within a particular metal level from year to year, adjustments to deductibles, copayments or coinsurance are sometimes required. These adjustments impact the cost and therefore the premium increases for the plan.

### **Administrative Costs and Anticipated Margins**

UHCPRV works to directly control administrative expenses by adopting better processes and technology and developing programs and innovations that make healthcare more affordable. We have led the marketplace by introducing key innovations that make healthcare services more accessible and affordable for customers, improve the quality and coordination of healthcare services, and help individuals and their physicians make more informed healthcare decisions.

Taxes and fees imposed by the state and federal government are significant factors that impact healthcare spending and must be included as additional administrative costs associated with the plans. These fees include Affordable Care Act taxes and fees which impact health insurance costs and need to be reflected in premium. Another component of premium is margin, which is set to address expected volatility and risk in the market.

The requested rate change is expected to be sufficient to cover the projected benefit and administrative costs for the 2027 plan year.

# 1 Actuarial Memorandum

This memorandum documents the development of Individual market health insurance premium rates for UnitedHealthcare Plan of the River Valley, Inc. (“UH CPRV”). UH CPRV is offering Individual health insurance products on and off the Exchange in the Bronze, Silver and Gold metal tiers, with the premium rates documented in this memorandum effective January 1, 2027. The proposed plans are shown in Appendix A.

## Considerations for the Regulatory Environment

The rates presented and submitted here were developed assuming that CSR payments are not funded by the federal government in 2027 and the cost of these payments will instead be funded through member premiums and Advanced Premium Tax Credits.

This document contains confidential, proprietary information and trade secrets. Disclosure of the information would cause harm to this company’s business operations. It is not otherwise readily ascertainable or publicly available. This information is strictly confidential and protected from disclosure by state law. Under federal law, this information is exempt from disclosure under Exemption 4 of the U.S. Freedom of Information Act, 5 U.S.C. §552, is a trade secret or confidential commercial or financial information as defined in 45 CFR §5.65, and is protected from disclosure under 45 CFR §§5.1 – 5.69 and 45 CFR §154.215 (i)(2). It may not be disclosed to any other state or federal regulatory agencies unless the recipient agrees in writing prior to receipt to maintain the confidentiality of the information.

# 2 General Information Section

## Company Identifying Information

Company Legal Name: UnitedHealthcare Plan of the River Valley, Inc.  
State: Iowa  
HIOS Issuer ID: 56610  
Market: Individual  
Effective Date: January 1, 2027

## Company Contact Information

Primary Contact Name: [Redacted: TRADE SECRET]  
Primary Contact Telephone Number: [Redacted: TRADE SECRET]  
Primary Contact Email Address: [Redacted: TRADE SECRET]

### 3 Proposed Rate Changes

UHCPRV will sell Individual policies with an effective date of January 1, 2027. The 2027 aggregate rate change as shown on the Unified Rate Review Template (URRT) is [Redacted: TRADE SECRET]. Rate changes by plan are found in Worksheet 2, row 1.11 of the URRT. The quantitative impact for all significant factors driving the proposed rate change is shown in the table below.

[Table Redacted]

[Redacted: TRADE SECRET]

### 4 Market Experience

#### 4.1 Experience and Current Period Premium, Claims, and Enrollment

**Paid Through Date:** [Redacted: TRADE SECRET]

**Current Date:** [Redacted: TRADE SECRET]

#### Allowed and Incurred Claims Incurred During the Experience Period

Allowed claims and incurred claims are pulled from the same source(s) and calculated using a similar methodology. Only claim amounts for members in the Individual Single Risk Pool for claims which have already been processed are included in our claims data (incomplete claims). Pharmacy rebates are processed outside the claims system and are equal on an incurred and allowed basis.

A set of completion factors is applied to the incomplete claims to develop the expected allowed and incurred claims for the experience period.

		<b>Allowed Claims</b>	<b>Incurred Claims</b>
A	Claims processed through issuer's claims system for experience period and paid through date above	[Redacted: TRADE SECRET]	[Redacted: TRADE SECRET]
B	Claims processed outside issuer's claims system for same time period	[Redacted: TRADE SECRET]	[Redacted: TRADE SECRET]
C	Estimate of claims incurred but not paid as of paid through date above	[Redacted: TRADE SECRET]	[Redacted: TRADE SECRET]
=A-B+C	Estimated claims incurred during experience period	[Redacted: TRADE SECRET]	[Redacted: TRADE SECRET]

The same methodology was used to develop the estimate of claims incurred but not paid for both allowed claims and incurred claims in the experience period. The methodology incorporates estimates based upon developed completion factors. Model results are evaluated for reasonableness and actuarial judgment may be applied.

The claims used to develop completion factors are reflective of the experience period claims for the information submitted. The incurred but not paid claims are not unusually high or unusually low relative to the experience period claims paid.

## **4.2 Benefit Categories**

Claims processed through UHCPRV's systems were mapped to the benefit categories in Worksheet 1, Section II of the URRT based on where services were administered and the types of medical services rendered.

- **Inpatient Hospital** includes non-capitated facility services for medical, surgical, maternity, mental health and substance abuse, skilled nursing and other services provided in an inpatient facility setting and billed by the facility.
- **Outpatient Hospital** includes non-capitated facility services for surgical, emergency room, laboratory, radiology, therapeutic, observation and other services provided in an outpatient facility setting and billed by the facility.
- **Professional** includes non-capitated primary care, specialist care, therapeutic, the professional component of laboratory and radiology and other professional services, other than hospital based professionals whose payments are included in facility fees.
- **Other Medical** includes non-capitated ambulatory, home health care, durable medical equipment, prosthetics, supplies, vision exams, dental services and other services.
- **Capitation** includes all services provided under one or more capitated agreements.
- **Prescription Drug** includes drugs dispensed by a pharmacy. This amount is net of rebates received from drug manufacturers.

The benefit categories were defined by our claims department using standard industry definitions.

## **4.3 Projection Factors**

The following describes the factors used to project experience period allowed claims to the 2027 projection period.

### **4.3.1 Trend Factors**

A trend assumption was applied to translate 2025 experience year claims costs to calendar year 2027 claims costs.

The assumptions shown in "Year 1 Trend" and "Year 2 Trend" of Worksheet 1 of the URRT represent 12 months of ongoing changes in utilization, unit costs and technology. The combined, annualized trend assumption implied is [Redacted: TRADE SECRET] This assumption is based on [Redacted: TRADE SECRET] This trend assumption does not include any expected changes in demographics, morbidity or benefit changes.

### **4.3.2 Adjustments to Trended EHB Allowed Claims PMPM**

This section explains adjustments other than trend that are made to the experience period claims in order to develop the projected Index Rate.

#### **Morbidity Adjustment**

The Morbidity Adjustment factor is [Redacted: TRADE SECRET] as shown on Worksheet 1 of the URRT.

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

### **Demographic Shift**

The Demographic Shift adjustment factor is [Redacted: TRADE SECRET] as shown on Worksheet 1 of the URRT.

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

### **Plan Design Changes**

The Plan Design Changes adjustment factor is [Redacted: TRADE SECRET] as shown on Worksheet 1 of the URRT.

[Redacted: TRADE SECRET]

### **Other**

The Other adjustment factor is [Redacted: TRADE SECRET] as shown on Worksheet 1 of the URRT.

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

### **4.3.3 Manual Rate Adjustments**

A description of the manual rate adjustments used follows.

#### **Source and Appropriateness of Experience Data Used**

UnitedHealthcare Individual ACA experience claims and membership was used to develop the manual rate ("UHC manual data"). The Individual experience data informed the utilization pattern (types of services, underlying morbidity level, etc.) that was used to build up the manual rate. The UHC manual data is net of pharmacy rebates and covers all required federal EHBs.

#### **Adjustments Made to the Data**

The base period allowed PMPMs were adjusted for the items described below.

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

### **Inclusion of Capitation Payments**

[Redacted: TRADE SECRET]

#### **4.3.4 Credibility of Experience**

UH CPRV has assigned [Redacted: TRADE SECRET] to its experience period data. The experience has been appropriately adjusted and weighted with the manual rate to reflect the material changes anticipated between the experience period and the projected period.

The following formula was used for assigning credibility to the experience period:

$$Z = \min \left[ 1, \left( \frac{MM}{FC} \right)^{.5} \right]$$

Where,

- Z is the credibility percentage applied to the experience data,
- MM is the experience period member months and
- FC is the member months required for full credibility

[Redacted: TRADE SECRET]

Consideration was given to guidance provided in Actuarial Standards of Practice #25, *Credibility Procedures*.

#### **4.3.5 Establishing the Index Rate**

As shown on Worksheet 1 of the URRT, the Index Rate for this filing is [Redacted: TRADE SECRET]. It estimates the total combined allowed claims PMPM for EHBs in the Iowa Individual market.

**4.3.6 Development of the Market-wide Adjusted Index Rate**

The Market-wide Adjusted Index Rate (MAIR) for the projection period is [Redacted: TRADE SECRET] as shown on Worksheet 1 of the URRT. The MAIR is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR 156.80(d)(1). The Index Rate and market level adjustments are on an allowed claims basis.

A	Projected Index Rate for January 1, 2027	[Redacted: TRADE SECRET]
B	Reinsurance	[Redacted: TRADE SECRET]
C	Risk Adjustment Payment/Charge	[Redacted: TRADE SECRET]
D	Exchange User Fees	[Redacted: TRADE SECRET]
<hr/>		
$=(A-B-C)/(1-D)$	Market-wide Adjusted Index Rate	[Redacted: TRADE SECRET]

**Reinsurance**

UHCPRV does not expect any reinsurance recoveries from federal or state reinsurance programs.

**Risk Adjustment Payment/Charge**

The projection period risk adjustment charge was developed by estimating the individual components of the risk adjustment transfer formula (e.g., PLRS, AV, etc.) for both UHCPRV and the statewide average. A description of the development of each component is described below:

- PLRS: [Redacted: TRADE SECRET]
- IDF: [Redacted: TRADE SECRET]
- GCF: [Redacted: TRADE SECRET]
- ARF: [Redacted: TRADE SECRET]
- AV: [Redacted: TRADE SECRET]
- Statewide average premium: [Redacted: TRADE SECRET]

The projected risk adjustment payable/receivable was converted to an allowed basis when developing the MAIR.

The risk adjustment fee of \$0.18 PMPM was incorporated into 2027 rates and included within the taxes and fees.

[Redacted: TRADE SECRET]

## **Exchange User Fees**

The Exchange User Fee is [Redacted: TRADE SECRET] represented as a percentage of allowed claims in the development of the MAIR. [Redacted: TRADE SECRET]

As a percent of premium, the Exchange User Fee is [Redacted: TRADE SECRET]

## **4.4 Plan Adjusted Index Rate**

The Plan Adjusted Index Rates (PAIR) were developed by applying allowable plan level adjustments to the MAIR. The allowable plan-level adjustments are shown in Appendix C.

The following describes how each component of the adjustment was developed.

### **Actuarial Value and Cost-Sharing Design**

The Pricing AVs reflecting the actuarial value and cost-sharing design of each plan was developed using a simulation methodology whereby a large dataset of Individual ACA enrollment and claims were calibrated to the projected population and member-level claims were re-adjudicated using the cost-sharing parameters of each plan design. Each plan was developed using the same dataset and population adjusted only for the expected induced utilization by metal level ensuring the same risk profile informs all Pricing AVs.

Induced utilization factors were applied at the metal level and are unchanged relative to the 2026 rate development. Utilization factors reflect the impact of differences in cost sharing on utilization; health status differences are not reflected in utilization factors.

### **CSR LOAD**

We have included an adjustment to the filed plans to reflect the impact of CSRs no longer being funded by the federal government. The regulation still requires CSR variant plans to be offered to low-income members, under the same federal AV requirements (keeping similar plan design and cost sharing structures as the current regulations), but the subsidy amounts will instead be a liability to the insurers and not the government. [Redacted: TRADE SECRET]

[Redacted: TRADE SECRET]

### **Provider Network, Delivery System Characteristics and Utilization Management Practices**

Only one network will be utilized in the projection period, so no plan-level adjustments for network differences have been applied.

### **Benefits in Addition to EHBs**

[Redacted: TRADE SECRET]

### **Administrative Costs**

Non-benefit administrative costs were applied on a percent of premium basis and on a PMPM basis. They are bucketed into three categories as shown on Worksheet 2 of the URR: (1) administrative expenses, (2) taxes and fees and (3) profit and risk load.

### ADMINISTRATIVE EXPENSE

UHCPRV expects to incur [Redacted: TRADE SECRET] in general administrative expenses for the Individual ACA block of business in Iowa for 2027. We expect to incur an additional [Redacted: TRADE SECRET] in broker commissions over this period.

Health Care Quality Improvement and Fraud Detection Expenses were estimated as [Redacted: TRADE SECRET] and were included in the administrative expense load.

[Redacted: TRADE SECRET]

### TAXES AND FEES

Taxes and regulatory fees included in the development of 2027 rates include the following:

- Risk Adjustment User Fee: \$0.18 PMPM
- PCORI Fee: \$0.34 PMPM
- Non-Reform Assessment Fee(s): [Redacted: TRADE SECRET]
- State Premium Tax: [Redacted: TRADE SECRET]
- Federal Income Tax: [Redacted: TRADE SECRET]

The Exchange User Fee load is not included here. It was previously built into the MAIR as discussed in Section 4.3.6.

### PROFIT AND RISK LOAD

The proposed 2027 premiums allocate [Redacted: TRADE SECRET] to profit and risk margin on a post-tax basis. [Redacted: TRADE SECRET]

### **Catastrophic Plans**

UHCPRV will not offer Catastrophic plans in Iowa for 2027.

## **4.5 Calibration**

### **Age Curve Calibration**

The approximate age calibration factor is [Redacted: TRADE SECRET]. It was determined as follows:

$$ACF = \frac{\sum Members}{\sum Members * Age Factor}$$

Where:

- ACF is the age calibration factor,
- Members are the projected members and
- Age Factor is the rating factor associated with each member.

An age factor of 0 is used for members who are not expected to pay premium.

Section 4.6 demonstrates how the PAIRs and age curve are used to generate a schedule of premiums.

### Geographic Factor Calibration

The geographic calibration factor is [Redacted: TRADE SECRET]. It was determined as follows:

$$GCF = \frac{\sum Members}{\sum Members * Area Factor}$$

Where:

- GCF is the geographic calibration factor,
- Members are the projected members and
- Area Factor is the rating factor associated with each member.

Geographic area factors are calculated based upon expected reimbursement rates UHCPRV aims to achieve by rating area. These factors are relative to the membership-weighted average reimbursement rate for all areas UHCPRV will service in Iowa. The factors only reflect differences in the costs of delivery (which can include unit cost and provider practice pattern differences) and not differences in population morbidity by geographic area.

Section 4.6 demonstrates how the PAIRs and area factors are used to generate a schedule of premiums.

### Tobacco Use Rating Factor Calibration

The tobacco calibration factor is [Redacted: TRADE SECRET]. It was determined as follows:

$$TCF = \frac{\sum Members}{\sum Members * Tobacco Factor}$$

Where:

- TCF is the tobacco calibration factor,
- Members are the projected members and
- Tobacco Factor is the rating factor associated with each member.

Section 4.6 demonstrates how the PAIRs and tobacco factors are used to generate a schedule of premiums.

### Application of Calibration Factors

The age, geographic and tobacco calibration adjustments are not plan specific. These adjustments are applied uniformly to all plans.

The age rating curve used by UHCPRV in Iowa is the curve indicated in the HHS Notice of Benefit and Payment Parameters for 2018 Final Rule.

## 4.6 Consumer Adjusted Premium Rate Development

The member's premium rate is calculated by first multiplying the PAIR by the calibration factors. This is the Calibrated PAIR, which is shown on Worksheet 2, row 3.14 of the URRT. The result can then be multiplied by the member's specific age, geographic and tobacco rating factors to determine the approximate member rate.

$$CPAIR = PAIR \times ACF \times GCF \times TCF$$

$$CAPR = CPAIR \times \text{Age Factor} \times \text{Geographic Factor} \times \text{Tobacco Factor}$$

Where:

- CPAIR is the Calibrated Plan Adjusted Index Rate,
- PAIR is the Plan Adjusted Index Rate,
- ACF is the age calibration factor,
- GCF is the geographic calibration factor,
- TCF is the tobacco calibration factor,
- CAPR is the Consumer Adjusted Premium Rate and
- Age, Geographic and Tobacco Factors are the rating factors associated with each member.

The premium for family coverage is determined by summing the premiums for each individual family member, provided at most three child dependents under age 21 are taken into account.

The rate manual and a demonstration of how the allowable rating factors are applied to the Calibrated PAIR to determine the Consumer Adjusted Premium Rate are shown in Appendix B.

## 5 Projected Loss Ratio

The projected medical loss ratio (MLR) for the individual line of business is [Redacted: TRADE SECRET]. This was calculated using the federally prescribed MLR methodology.

[Redacted: TRADE SECRET] Taxes and regulatory fees were excluded from premium in the calculation of this value. The calculation for the projected federal MLR is included in Appendix D.

## 6 Plan Product Information

### 6.1 AV Metal Values

The federal Actuarial Value Calculator was used to generate the AV metal values shown on Worksheet 2, row 1.6 of the URRT. Please refer to the Unique Plan Design Justification and Documentation document for the impact of plans and cost sharing inputs modifications made in order to enter these into the federal Actuarial Value Calculator.

### 6.2 Membership Projections

The total membership projections for 2027 were based upon internal modeling of market share estimates for the Iowa counties we intend to service. The percentage of membership distributions by metal tier and variant was based on the metal, CSR variants and rating area/county distribution enrollments for Iowa from actual UHCPRV enrollment with additional consideration to current Individual ACA Open Enrollment Period reports and the regulatory landscape. Refinements to this data are applied for strategic initiatives and actuarial judgment.

Projected enrollment in CSR subsidy eligible Silver plans was informed by actual UHCPRV enrollment and similar distributions in the Open Enrollment Period reports with consideration for regulatory impacts. The resulting projected enrollment by plan and subsidy level is provided in Appendix E.

### **6.3 *Terminated Plans and Products***

Please see Appendix A for crosswalk of the terminated plans and products. Please see Worksheet 2, Section I of the URRT for plan names associated with the terminated and mapped plans.

### **6.4 *Plan Type***

The drop downs in Worksheet 2, Section 1 of the URRT describe the issuer's plan types appropriately.

## **7 *Miscellaneous Instructions***

### **7.1 *Reliance***

[Redacted: TRADE SECRET]

### **7.2 *Actuarial Certification***

I, [Redacted: TRADE SECRET], am a Member of the American Academy of Actuaries (MAAA). I meet the Qualification Standards of Actuarial Opinion as adopted by the American Academy of Actuaries for preparing premium rate filings for insurers.

This actuarial certification applies to the UnitedHealthcare Plan of the River Valley, Inc. Individual products to be offered in the federal health Exchange. I certify that the projected Index Rate is:

- In compliance with all applicable state and federal statutes and regulations (45 CFR 156.80 and 147.102)
- Developed in compliance with applicable Actuarial Standards of Practice, including:
  - ASOP No. 5, *Incurred Health and Disability Claims*
  - ASOP No. 8, *Regulatory Filings for Health Benefits, Accident and Health Insurance, and Entities Providing Health Benefits*
  - ASOP No. 12, *Risk Classification*
  - ASOP No. 23, *Data Quality*

- ASOP No. 25, *Credibility Procedures*
- ASOP No. 41, *Actuarial Communications*
- ASOP No. 50, *Determining Minimum Value and Actuarial Value under the Affordable Care Act*
- Reasonable in relation to the benefits provided and the population anticipated to be covered
- Neither excessive nor deficient.

The Index Rate and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates.

The geographic rating factors reflect only differences in the cost of delivery (which can include unit cost and provider practice pattern differences) and do not include differences for population morbidity by geographic area.

The federal AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Unified Rate Review Template for all plans. Any alternate methodologies are described in the Unique Plan Design Justification and Documentation.

The Part I Unified Rate Review Template does not demonstrate the process used to develop the rates. Rather it represents information required by federal regulation to be provided in support of the review of rate increases, for certification of qualified health plans for federally facilitated exchanges and for certification that the Index Rate is developed in accordance with federal regulation and used consistently and only adjusted by the allowable modifiers.

Sincerely,

[Redacted: TRADE SECRET]

June 8, 2026
