Investment related expenses - Substantially all of our investments are managed by AAM, a subsidiary of AGM. AAM provides direct investment management, asset allocation, mergers and acquisition asset diligence, and certain operational support services for our investment portfolio, including investment compliance, tax, legal, and risk management support. As of December 31, 2016, AAM directly manages $4,042 million of our investment portfolio assets, of which 75% are rated one or two by the NAIC. For certain assets which require specialized sourcing and underwriting capabilities, AAM has chosen to mandate sub-advisors rather than building out in-house capabilities. For the services related to these investments, AAM earns a fee of 0.40% per annum on all assets managed in accounts owned by or related to the Company, including sub-advised assets but excluding certain other limited exceptions. Additionally, A AM recharges the sub-advisory fees to the Company.

Assets supporting funds withheld at interest: The majority of the assets supporting the funds withheld at interest are managed by AAM. See *Note 6 - Funds Withheld at Interest* for more information.

AAM has entered into a Master Sub-Advisory Agreement (MSAA) with certain Apollo affiliates to sub-advise AAM with respect to a portion of our assets, with the fees recharged to us, in addition to the gross fee of 0.40% per annum paid to AAM as described above. The MSAA covers services rendered by Apollo-affiliated sub-advisors relating to investments in certain asset classes, primarily CLO, CMBS, and ABS.

The following represents the assets sub-advised by Apollo affiliates:

	December 31,		
(In millions, except for percentages)	2016	2015	2014
Fixed maturity securities			
U.S. state, municipals, and political subdivisions	$ —	$ —	$ 6
Corporate	131	57	29
CLO	574	475	273
ABS	8	48	28
CMBS	37	38	—
Trading securities	—	—	35
Total assets	$ 750	$ 618	$ 371
Percent of total AAM managed Company assets	16%	15%	17%

The management and sub-advisory fees are included within the net investment income line on the statements of income and (loss). The management fees payable as of December 31, 2016, 2015, and 2014 were $2 million, $14 million and $10 million respectively. The sub-advisory fees payable as of December 31, 2016, 2015, and 2014 were $19 million, $19 million, and $12 million respectively.

Because the Apollo Group has a significant voting interest in AHL, in order to protect against potential conflicts of interest resulting from transactions that we and AHL have entered, and will continue to enter into with the Apollo Group, the AHL board of directors has formed a conflicts committee, consisting of three of its directors (two of whom are also ALRe directors) who are not officers or employees of any member of the Apollo Group. The conflicts committee reviews and a majority of the committee members must approve certain material transactions between AHL and/or its subsidiaries and the Apollo Group, subject to certain exceptions.

Service fees - AHL has entered into shared services agreements with AAM. Under these agreements, we and AAM make available to each other certain personnel and services. Expenses for the services are based on the amount of time spent on the affairs of the other party, in addition to actual expenses incurred and certain cost reimbursements. For the years ended December 31, 2016, 2015, and 2014, net expenses allocated from (to) AAM under these agreements were $0 million, $(1) million, and $0 million, respectively. The Company had no net expenses payable to AAM as of December 31, 2016, 2015, and 2014.

17. Commitments and Contingencies

Contingent Commitments-The Company had commitments to make additional capital contributions to certain investment funds of $116 million, $57 million and $48 million as of December 31, 2016, 2015, and 2014 respectively. The Company expects most of its current commitments will be invested over the next five years; however, these commitments could become due any time upon counterparty request.

Restricted Assets - The total restricted assets included on the balance sheets are as follows:

	December 31,		
(In millions)	2016	2015	2014
Fixed maturity securities - AFS	$ 260	$ 124	$ 143
Short term - AFS	16	—	—
Restricted cash	11	9	24
Total restricted assets	$ 287	$ 133	$ 167

ALRe has established reinsurance trusts of assets equal to statutory reserves, plus an additional amount of assets, as a result of a coinsurance agreement with United American Corporation.

ALRe has established escrow account of assets equal to a portion of statutory reserves, as a result of the modified coinsurance agreement with Midland described in *Note 7 - Reinsurance*.

Litigation, Claims, and Assessments - On June 12, 2015, a putative class action complaint was filed in the United States District Court, Northern District of California against ALRe, AHL, AUSA, AAIA, AAM, and AGM. The complaint, which is similar to complaints previously filed against other large insurance companies, primarily alleges that captive reinsurance and other transactions had the effect of misrepresenting the financial condition of AAIA. The complaint purports to be brought on behalf of a class of purchasers of annuity products issued by AAIA between 2007 and the present. There are also various allegations related to the purchase of Aviva USA and concerning entry into a modco transaction with ALRe in October 2013. The suit asserts claims of violation of the Racketeer Influenced and Corrupt Organizations Act and seeks compensatory damages, trebled, in an amount to be determined, costs, and attorneys' fees. On March 25, 2016, our motion to transfer to the United States District Court, Southern District of Iowa was granted. On May 24, 2016, plaintiff filed an Amended Complaint that removed plaintiff Silva and defendant Aviva plc from the action. Defendants re-filed their motion to dismiss, which is fully briefed. The court, however, stayed consideration of the motion and all discovery pending a ruling from the Eighth Circuit in *Ludwick*. (For background, *Ludwick* is a putative class action against Fidelity & Guaranty Life that involves similar issues and arguments. F&G obtained a dismissal in federal district court, and plaintiffs in the case appealed to the Eighth Circuit. The Eighth Circuit heard oral arguments on the appeal on November 16, 2016, but no decision has been issued). We believe that we have meritorious defenses to the claims set forth in the complaint and intend to vigorously defend the litigation. In light of the inherent uncertainties involved in this matter, reasonably possible losses, if any, cannot be estimated at this time.

18. Subsequent Events

On April 13, 2017, A.M. Best upgraded the Financial Strength Rating of the Company to "A" (Excellent) from "A-" (Excellent) and the Long-Term Issuer Credit Rating (Long-Term ICR) to "a" from "a-". The outlook of these credit ratings has been revised to stable from positive.

The Company has evaluated the impact of subsequent events through April 14, 2017, the date at which the financial statements were available to be issued.

Athene Life Re Ltd.
Statutory Financial Statements (Unaudited)
September 30, 2017

Assets and liabilities related to modified coinsurance (“modco”) arrangements are presented on a gross basis. For affiliated reinsurance, the assets and liabilities are also shown on a gross basis on the NAIC financial statements of our sister company, Athene USA Corporation ("Athene USA"). As such, the modco assets and liabilities in the Athene USA NAIC financial statements would need to be eliminated in order to see the economic combined statutory position of the Athene Bermuda and U.S. legal entities.

The Bermuda Monetary Authority (the "BMA") has updated the format of the statutory financial statements and as such we are utilizing the new format beginning with Q1 2017 results. There have been no changes to the accounting principles and all prior year amounts remain the same.

NOTE CONCERNING FORWARD-LOOKING STATEMENTS

This *Annual Report on Form* 10-K, including "Risk Factors," "Management's Narrative Analysis of the Results of Operations and Financial Condition," and "Business" contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements include statements relating to future developments in our business or expectations for our future financial performance and any statement not involving a historical fact. Forward-looking statements use words such as "anticipate," "believe," "estimate," "expect," "intend," "plan," and other words and terms of similar meaning in connection with a discussion of future operating or financial performance. Actual results, performance or events may differ materially from those projected in any forward-looking statement due to, among other things, (i) general economic conditions, particularly economic conditions in our core markets, (ii) performance of financial markets, including emerging markets, (iii) the frequency and severity of insured loss events, (iv) mortality and morbidity levels, (v) persistency and lapse levels, (vi) interest rates, (vii) currency exchange rates, (viii) general competitive factors, (ix) changes in laws and regulations, including those relating to insurance regulatory reform initiatives applicable to captive reinsurance entities and those made pursuant to the Dodd-Frank Wall Street Reform and Consumer Protection Act or the U.S. Department of Labor's proposed rules and exemptions pertaining to the fiduciary status of providers of investment advice; (x) changes in the policies of governments and/or regulatory authorities; and (xi) other factors described in the section "Item 1A. Risk Factors."

The risks included here are not exhaustive. Current reports on Form 8-K and other documents filed with the Securities and Exchange Commission ("SEC") include additional factors that could affect our businesses and financial performance. Moreover, we operate in a rapidly changing and competitive environment. New risk factors emerge from time to time, and it is not possible for management to predict all such risk factors.

PART I

Item 1. Business
(Dollar amounts in millions, unless otherwise stated)

Organization of Business

Voya Insurance and Annuity Company ("VIAC" or "the Company") is a stock life insurance company domiciled in the State of Iowa and provides financial products and services in the United States. VIAC is authorized to conduct its insurance business in all states, except New York and in the District of Columbia.

Prior to May 2013, Voya Financial, Inc., together with its subsidiaries, including the Company, was an indirect, wholly owned subsidiary of ING Groep N.V. ("ING Group" or "ING"), a global financial services holding company based in The Netherlands, with American Depository Shares listed on the New York Stock Exchange. In 2009, ING Group announced the anticipated separation of its global banking and insurance businesses, including the divestiture of Voya Financial, Inc., together with its subsidiaries, including the Company. On April 11, 2013, Voya Financial, Inc. announced plans to rebrand as Voya Financial. On May 2, 2013, the common stock of Voya Financial, Inc. began trading on the New York Stock Exchange under the symbol "VOYA." On May 7, 2013 and May 31, 2013, Voya Financial, Inc. completed its initial public offering of common stock, including the issuance and sale by Voya Financial, Inc. of 30,769,230 shares of common stock and the sale by ING Insurance International B.V. ("ING International"), an indirect wholly owned subsidiary of ING Group and previously the sole stockholder of Voya Financial, Inc., of 44,201,773 shares of outstanding common stock of Voya Financial, Inc. (collectively, the "IPO"). On September 30, 2013, ING International transferred all of its shares of Voya Financial, Inc. common stock to ING Group.

On October 29, 2013, ING Group completed a sale of 37,950,000 shares of common stock of Voya Financial, Inc. in a registered public offering ("Secondary Offering"), reducing ING Group's ownership of Voya Financial, Inc. to 57%.

Throughout 2014, ING Group completed the sale of an aggregate of 82,783,006 shares of common stock of Voya Financial, Inc. in a series of three registered public offerings. Also during 2014, pursuant to the terms of share repurchase agreements between ING Group and Voya Financial, Inc., Voya Financial, Inc. acquired 19,447,847 shares of its common stock from ING Group. As of the end of 2014, ING Group's ownership of Voya Financial, Inc. had been reduced to approximately 19%.

In March of 2015, ING Group completed a sale of 32,018,100 shares of common stock of Voya Financial, Inc. in a registered public offering. Concurrently with this offering, pursuant to the terms of a share repurchase agreement between ING Group and Voya Financial, Inc., Voya Financial, Inc. acquired 13,599,274 shares of its common stock from ING Group.

As a result of these transactions, ING Group satisfied the provisions of its agreement with the European Union regarding the divestment of its U.S. insurance and investment operations, which required ING Group to divest 100% of its ownership interest in Voya Financial, Inc. together with its subsidiaries, including the Company by the end of 2016. ING Group continues to hold warrants to purchase up to 26,050,846 shares of Voya Financial, Inc. common stock at an exercise price of $48.75, in each case subject to adjustments.

VIAC is a direct, wholly owned subsidiary of Voya Holdings Inc. ("Parent"), which is a direct, wholly owned subsidiary of Voya Financial, Inc.

Description of Business

We currently offer various insurance products, including fixed and indexed annuities, investment-only products and payout annuities for pre-retirement wealth accumulation and postretirement income management. Our annuity products are distributed by national and regional brokerage and securities firms, independent broker-dealers, banks, life insurance companies with captive agency sales forces, independent insurance agents, independent marketing organizations and affiliated broker-dealers. Our primary annuity customers are individual consumers. We stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010, as part of a global business strategy and risk reduction plan. New amounts will continue to be deposited in VIAC variable annuities as add-on premiums to existing contracts.

We have historically issued guaranteed investment contracts and funding agreements (collectively referred to as "GICs"), primarily to institutional investors and corporate benefit plans. In 2009, we made a strategic decision to run-off the assets and liabilities in the GIC business over time. New GIC contracts may be issued on a limited basis to replace maturing contracts.

See "-Reserves for Future Policy Benefits and Separate Accounts" below for a discussion of our reserves by product type.

We have one operating segment, which offers the products described below.

Products and Services

Products currently offered by us include fixed and indexed annuities, and payout annuities, designed to address customer needs for tax-advantaged savings, retirement needs and wealth-protection concerns, as well as GICs. As mentioned above, the Company stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010. However, because the existing contracts remain in effect, they are described below.

Fixed Annuities: The fixed annuities offered by us are general account products and include single premium immediate, multi-year guaranteed, annual reset and fixed indexed annuities ("FIA"). Under fixed annuity contracts, the principal amount is guaranteed and, for a specified time period, we credit interest to the contract owner accounts at a fixed interest rate. Interest on FIAs is credited based on allocations selected by a customer in one or more of the strategies we offer and upon policy parameters that we set. The FIA strategies include a fixed interest rate option, as well as several options based upon performance of various external financial market indices. Such indices may include equity indices, such as the Standard & Poor's 500 Index ("S&P 500"), or an interest rate benchmark, such as the change in London Interbank Offered Rates ("LIBOR"). For accounting purposes, the index return component of an FIA is considered an embedded derivative. See further discussion under "-Reserves for Future Policy Benefits and Separate Accounts" below. We bear the investment risk on fixed annuities, because, while we credit contract owner accounts with a stated interest rate, we cannot be certain the investment income earned on the general account assets will exceed that rate.

Some FIAs contain guaranteed withdrawal benefit features at an additional cost. These living benefits guarantee a minimum annual withdrawal amount for life. The amount of the guaranteed annual withdrawal may vary by age at first withdrawal.

Our major source of income from fixed annuities is the spread between the investment income earned on the underlying general account assets and the interest rate credited to contract owner accounts.

Guaranteed Investments Contracts and Funding Agreements: We also have GICs issued to the stable value market and other institutional customers. We profit from the GIC business by earning income in excess of the amount credited to the customer accounts, less the cost of administering the product. We bear the investment risk because, while we credit customer accounts with an interest rate based on a predetermined index, plus a spread or a fixed rate, we cannot be certain the investment income earned on the general account investments, less expenses will exceed that rate.

Variable Annuities: While we stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010, our existing variable annuities are investment vehicles in which contract owner deposits are recorded and primarily maintained in separate accounts established by us and registered with the SEC as a unit investment trust. Unlike fixed annuities, variable annuity contract owners bear the risk of investment gains and losses associated with the selected investment allocation. We, however, issued certain guaranteed death and living benefits (described below) under which we bear specific risks associated with these products.

Separate account assets and liabilities generally represent funds maintained to meet specific investment objectives of contract owners. In general, investment income and investment gains and losses accrue directly to the separate accounts. The assets of the separate account are legally segregated and are not subject to claims that arise out of any of the our other business.

Separate account assets supporting variable options under variable annuity contracts are invested, as designated by the contract owner or participant under a contract, in shares of sub-accounts managed by our affiliates or in other selected sub-accounts not managed by our affiliates. Variable annuity deposits are allocated to various sub-accounts established within the separate account. Each sub-account represents a different investment option into which the contract owner may allocate deposits. The account value of a variable annuity contract is equal to the aggregate value of the sub-accounts selected by the contract owner, including the value allocated to any fixed account, less fees and expenses. We offer investment options for our variable annuities covering a wide range of investment styles, including large, mid and small cap equity funds, as well as fixed income alternatives. Many of the variable annuity contracts issued by us are combination contracts, offering both variable and fixed options under which some or all of the deposits may be allocated by the contract owner to a fixed account.

Minimum Guarantees: Variable annuity contracts containing minimum guaranteed death and living benefits expose us to equity risk. A decrease in the equity markets may cause a decrease in the account values, thereby increasing the possibility that we may be required to pay amounts to contract owners due to guaranteed death and living benefits. An increase in the value of the equity

markets may increase account values for these contracts, thereby decreasing our risk associated with guaranteed death and living benefits.

We stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010. However, our existing variable annuity block of business contains certain guaranteed death and living benefits made available to contract owners as described in "Item 7A. Quantitative and Qualitative Disclosures About Market Risk."

Other Insurance Products

Historically, we provided interest-sensitive, traditional life insurance and health insurance products. All health insurance has been ceded to other insurers and new policies are no longer written. We ceased the issuance of life insurance policies in 2001, and all life insurance business is currently in run-off. A certain portion of the assets held in the general account are dedicated to funding this block of business.

Fees and Margins

Insurance and expense charges, investment management fees, service fees and other fees earned by us vary by product and depend on, among other factors, the funding option selected by the customer under the product. For annuity products where assets are allocated to variable funding options through a separate account, we may charge the separate account asset-based insurance and expense fees.

In addition, where the customer selects a variable funding option, we may receive compensation from the fund's adviser, administrator, or other affiliated entity, for the performance of certain administrative, recordkeeping or other services. This compensation, which may be deducted from fund assets, may include a share of the management fee, service fees, 12b-1 distribution fees or other revenues based on a percentage of average net assets held in the fund by us. For funds managed by an affiliate, additional compensation may be received in the form of intercompany payments from the fund's investment advisor or the investment advisor's parent in order to allocate revenue and profits across the organization.

For fixed funding options, we earn a margin that is based on the difference between income earned on the investments supporting the liability and interest credited to customers.

We may also receive other fees or charges depending on the nature of the products.

Strategy, Method of Distribution and Principal Markets

We believe longer life expectancies, an aging population and growing concern over the stability and availability of the Social Security system have made retirement planning a priority for many Americans. The target market for our annuity products is primarily individuals.

The principal distribution channels of our fixed annuities include national and regional brokerages and securities firms, independent broker-dealers, banks, life insurance companies with captive agency sales forces, independent insurance agents, independent marketing organizations and affiliated broker-dealers.

Our investment-only products are distributed nationally, primarily through relationships with independent brokers, financial planners and agents. New sales are obtained from either a "rollover" from an existing retirement account, a 1035-exchange or funded through non-qualified after-tax dollars.

Indexed annuities are marketed primarily based on underlying guarantee features coupled with consumer-friendly product designs offering the potential for equity market upside. We also offer fixed annuities offering a guaranteed interest rate or annuity payment suitable for clients seeking a stable return.

We stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010, as part of a business strategy and risk reduction plan. Some new amounts will continue to be deposited on VIAC variable annuities as add-on deposits to existing contracts.

GICs are issued primarily to institutional investors and corporate benefit plans through direct sales by home office personnel or through specialty insurance brokers. In 2009, we made a strategic decision to run-off the assets and liabilities in the GIC business over time. New GIC contracts may be issued on a limited basis to replace maturing contracts.

Since December 2013, we have been engaged in a strategic alliance with The Allstate Corporation ("Allstate") under which Allstate offers a full suite of our fixed annuity product offerings to Allstate customers. In addition, during 2015, we engaged in a strategic alliance with Farmers Financial Solutions, a part of the Farmers Insurance Group of Companies, under which we will be the exclusive provider of indexed annuity products to Farmers customers.

Assets Under Management

A substantial portion of our fees, other charges and margins, are based on assets under management ("AUM"). AUM represents on-balance sheet assets supporting customer account values/liabilities and surplus. Customer account values reflect the amount of policyholder equity that has accumulated within annuity, GIC and other insurance products. AUM includes general account assets in which we bear the investment risk and separate account assets in which the contract owner bears the investment risk. AUM-based revenues increase or decrease with a rise or fall in the amount of AUM, whether caused by changes in capital markets or by net flows.

AUM is principally affected by net deposits (i.e., annuity premiums and GIC deposits, less surrenders) and investment performance (i.e., interest credited to contract owner accounts for assets that earn a fixed return or market performance for assets that earn a variable return). The general and separate account AUM were as follows as of the dates indicated:

	December 31,	
	2015	**2014**
Variable annuities	$ 36,415.8	$ 40,787.9
Fixed annuities	18,132.2	17,306.7
Guaranteed investment contracts and funding agreements	950.4	961.3
Other insurance products	970.1	1,028.5
Total	$ 56,468.5	$ 60,084.4

Competition

The competitive annuity market remains intense and is dominated by a number of large, highly-rated insurance companies. Increasing competition within the retirement savings business from traditional insurance carriers, as well as banks and mutual fund companies, offers consumers many choices. Our annuity products compete in the annuity market principally on the basis of investment performance, product design, brand recognition, financial strength ratings, distribution capabilities, levels of charges and credited rates, reputation and customer service.

Investment-only products compete with brokerage accounts and other financial service and asset allocation offerings.

We compete in the GIC market primarily on the basis of our capital markets, product structuring and risk management expertise, as well as its brand recognition and financial strength ratings. Other competitors in this market include other life insurance companies, as well as banks and other financial institutions.

Reserves for Future Policy Benefits and Separate Accounts

We establish and carry actuarially-determined reserves that are calculated to meet our future obligations. Reserves also include estimates of unpaid claims as well as claims that we believe have been incurred but have not yet been reported as of the balance sheet date. The principal assumptions used to establish liabilities for future policy benefits are based upon Company experience and periodically reviewed against industry standards. These assumptions include mortality, morbidity, policy lapse, contract renewal, payment of subsequent premiums or deposits by the contract owner, retirement, investment returns, inflation, benefit utilization and expenses. Changes in, or deviations from, the assumptions used can significantly affect our reserve levels and related results of operations.

Reserves for traditional life insurance contracts (term insurance, participating and non-participating whole life insurance and traditional group life insurance) and accident and health insurance represent the present value of future benefits to be paid to or on behalf of contract owners and related expenses, less the present value of future net premiums. Assumptions as to interest rates, mortality, expenses and persistency are based on our estimates of anticipated experience at the period the policy is sold or acquired,

including a provision for adverse deviation. Interest rates used to calculate the present value of these reserves ranged from 2.3% to 7.2%.

Reserves for payout contracts with life contingencies are equal to the present value of expected future payments. Assumptions as to interest rates, mortality and expenses are based on our estimates of experience at the period the policy is sold or acquired, including a provision for adverse deviation. Such assumptions generally vary by annuity plan type, year of issue and policy duration. Interest rates used to calculate the present value of future benefits ranged from 1.0% to 7.5%.

Reserves for FIAs are computed in accordance with the requirements of Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") Topic 944, "Financial Services - Insurance," Topic 815, "Derivatives and Hedging" and Topic 820, "Fair Value Measurements and Disclosures." Accordingly, the aggregate initial liability is equal to the deposit received plus a bonus, if applicable, and is split into a host component and an embedded derivative component. Thereafter, the host liability accumulates at a set interest rate and the embedded derivative liability is recognized at fair value, with the change in fair value recorded in Other net realized capital gains (losses) in the Statements of Operations.

Reserves for universal life products are equal to cumulative deposits, less withdrawals and charges, plus credited interest thereon.

Under the requirements of ASC Topic 944, the Company calculates additional reserve liabilities for certain variable annuity guaranteed benefits, FIA withdrawal benefits and universal life products with certain patterns of cost of insurance charges and certain other fees. The additional reserve for such products recognizes the portion of contract assessments received in early years used to compensate the insurer for services provided in later years.

We calculate a benefit ratio for each block of business that meets the requirements for additional reserves as outlined in ASC Topic 944 and calculate an additional reserve by accumulating amounts equal to the benefit ratio multiplied by the assessments for each period, reduced by excess benefits during the period. The additional reserve is accumulated at interest rates consistent with the deferred policy acquisition costs model for the period. The calculated reserve includes a provision for universal life contracts with patterns of cost of insurance charges that produce expected gains from the insurance benefit function followed by losses from that function in later years.

Guaranteed minimum accumulation benefits ("GMAB"), guaranteed minimum withdrawal benefits ("GMWB") without life contingent payouts and guaranteed minimum withdrawal benefits for life ("GMWBL") are considered to be embedded derivatives under ASC Topic 815 and Topic 820. The additional reserves for these guarantees are recognized at fair value, with the change in fair value recorded in Other net realized capital gains (losses) in the Statements of Operations.

Reserves for GICs are calculated using the amount deposited with us, less withdrawals, plus interest accrued to the ending valuation date. Interest on these contracts is accrued by a predetermined index, plus a spread or a fixed rate, established at the issue date of the contract.

Our life and annuity insurance reserves (general and separate account) and deposit-type funds were comprised of each type of the following products as of the dates indicated:

	December 31,			
	2015		2014	
	Reserves	% of Total	Reserves	% of Total
Variable annuity	$ 40,353.9	66.0%	$ 43,902.4	67.9%
Fixed annuity	18,117.8	29.7%	18,111.5	28.0%
GICs	1,048.2	1.7%	1,036.5	1.6%
Other insurance products	1,585.4	2.6%	1,642.3	2.5%
Total	$ 61,105.3	100.0%	$ 64,692.7	100.0%

Reinsurance Arrangements

We utilize indemnity reinsurance agreements to reduce our exposure to losses from our annuity and life insurance businesses. Reinsurance permits recovery of a portion of losses from reinsurers, although it does not discharge our primary liability as the direct insurer of the risks. Reinsurance treaties are structured as monthly or yearly renewable term, coinsurance, or modified

coinsurance. The Company also evaluates the financial strength of potential reinsurers and continually monitors the financial condition of reinsurers.

As of December 31, 2015, we have a significant concentration of ceded reinsurance with our affiliates, Security Life of Denver Insurance Company ("SLD") and Security Life of Denver International Limited ("SLDI") primarily related to GICs and universal life policies with respect to SLD and variable annuities with respect to SLDI. The outstanding reinsurance recoverable balances may fluctuate from period to period. SLDI redomesticated from the Cayman Islands to the State of Arizona, effective December 20, 2013. SLDI was approved as an Arizona-domiciled captive reinsurer by the Arizona Department of Insurance.

One of the main risks reinsured by us is the guaranteed minimum death benefits ("GMDB") on our variable annuity policies issued prior to January 1, 2000. For contracts issued after December 31, 1999, we hedge our exposure due to these products. Other reinsurance contracts coinsure life, accident and health and annuity businesses. We continually monitor and evaluate the financial strength and credit ratings of our reinsurers. Only those reinsurance recoverable balances deemed probable of recovery are reflected as assets on our Balance Sheets.

We entered into an automatic reinsurance agreement on June 30, 2008 with SLDI. Under the terms of the agreement, we ceded to SLDI 100% of the benefits guaranteed under specific variable annuity guaranteed living benefit riders attached to certain variable annuity contracts issued by us on or after January 1, 2000. Effective July 1, 2009, we and SLDI entered into an amended and restated reinsurance agreement to change the reinsurance basis of the existing automatic reinsurance agreement dated June 30, 2008 between us and SLDI from coinsurance to a combined coinsurance and coinsurance funds withheld basis. Effective October 1, 2011, we and SLDI entered into an amended and restated automatic reinsurance agreement of the existing 2009 amended and restated automatic reinsurance agreement in order to provide more flexibility to the Company and SLDI with respect to the collateralization of the reserves related to the variable annuity guaranteed living benefits reinsured under the agreement.

Effective May 1, 2005, we entered into a coinsurance agreement with our affiliate, SLD. Under the terms of the agreement, SLD assumed and accepted the responsibility for paying, when due, 100% of the liabilities arising under the multi-year guaranteed fixed annuity contracts issued by us between January 1, 2001 and December 31, 2003. In addition, we assigned SLD all future premiums received by us attributable to the ceding contracts. The coinsurance agreement was accounted for using the deposit method. On September 25, 2015, we recaptured, via a commutation agreement, the multi-year guaranteed fixed annuity contracts ceded under the coinsurance agreement.

We also currently reinsure risks ceded by our affiliates, ReliaStar Life Insurance Company ("RLI") and SLD, on life insurance policies through a coinsurance funds withheld agreement, a quota share retrocession agreement and stop-loss agreements.

See "Item 7. Management's Narrative Analysis of the Results of Operations and Financial Condition-Liquidity and Capital Resources-Reinsurance Agreements" for further discussion of our reinsurance arrangements.

Investment Overview and Strategy

Our investment strategy seeks to achieve sustainable risk-adjusted returns by focusing on principal preservation, disciplined matching of asset characteristics with liability requirements and the diversification of risks. Investment activities are undertaken according to investment policy statements that contain internally established guidelines and risk tolerances and in all cases are required to comply with applicable laws and insurance regulations. Risk tolerances are established for credit risk, credit spread risk, market risk, liquidity risk and concentration risk across issuers, sectors and asset types that seek to mitigate the impact of cash flow variability arising from these risks.

Investments are managed by Voya Investment Management LLC, our affiliate, pursuant to an investment advisory agreement. Portfolios are established for groups of products with similar liability characteristics within us. Our investment portfolio consists largely of high quality fixed maturity securities and short-term investments, investments in commercial mortgage loans, limited partnerships and other instruments, including a small amount of equity holdings. Fixed maturity securities include publicly issued corporate bonds, government bonds, privately placed notes and bonds, mortgage-backed securities and asset-backed securities. We use derivatives for hedging purposes and to replicate exposure to other assets as a more efficient means of assuming credit exposure similar to bonds of the underlying issuer(s).

Employees and Other Shared Services

We had 479 employees as of December 31, 2015, primarily focused on managing new business processing, customer service and product management for us and certain of our affiliates, as well as providing product development and distribution, actuarial and

finance services to us and certain of our affiliates. We also utilize services provided by Voya Services Company and other affiliates. These services include underwriting, risk management, human resources, investment management, information technology, legal and compliance services, as well as other new business processing, product distribution, marketing, customer service, product management, actuarial and finance related services. The affiliated companies are reimbursed for our use of various services and facilities under a variety of intercompany agreements.

On June 2, 2014, our affiliate, Voya Services Company entered into an agreement to outsource the actuarial valuation, modeling and hedging functions for our retail variable annuity products for which we ceased sales in 2010 to Milliman, Inc. ("Milliman"). Under this agreement, Milliman performs the calculation of financial reporting and risk metrics, along with the analytics used to determine hedge positions. We will continue to oversee and manage our existing block of variable annuity business and retain full accountability for assumptions and methodologies, as well as the setting of hedge objectives and the execution of hedge positions. This agreement will allow us to create a more variable cost structure for the block of variable annuity business.

REGULATION

Our operations and businesses are subject to a significant number of Federal and state laws, regulations, administrative determinations and similar legal constraints. Such laws and regulations are generally designed to protect our policyholders, contract owners and other customers and not our stockholders. Many of the laws and regulations to which we are subject are regularly re-examined and existing or future laws and regulations may become more restrictive or otherwise adversely affect our operations.

Following is a description of certain legal and regulatory frameworks to which we are or may be subject.

Insurance Regulation

Our operations are subject to comprehensive regulation and supervision under U.S. state and federal laws. Each U.S. state, the District of Columbia and U.S. territories and possessions have insurance laws that apply to companies licensed to carry on an insurance business in the jurisdiction. We are subject to the insurance laws of the State of Iowa, where we are domiciled and other jurisdictions in which we transact business. The primary regulator of our insurance operations is the Division of Insurance for the State of Iowa.

State insurance regulators have broad administrative powers with respect to all aspects of the insurance business including: licensing to transact business, licensing agents, admittance of assets to statutory surplus, regulating premium rates for certain insurance products, approving policy forms, regulating unfair trade and claims practices, establishing reserve requirements and solvency standards, establishing credit for reinsurance requirements, fixing maximum interest rates on life insurance policy loans and minimum accumulation or surrender values and other matters. State insurance laws and regulations include numerous provisions governing the marketplace conduct of insurers, including provisions governing the form and content of disclosures to consumers, product illustrations, advertising, product replacement, suitability, sales and underwriting practices, complaint handling and claims handling. State regulators enforce these provisions through periodic market conduct examinations. State insurance laws and regulations regulating affiliate transactions, the payment of dividends, and change of control transactions are discussed in greater detail below.

State insurance laws and regulations require us to file financial statements with state insurance regulators everywhere we are licensed and our operations and accounts are subject to examination by those regulators at any time. We prepare statutory financial statements in accordance with accounting practices and procedures prescribed or permitted by these regulators. The National Association of Insurance Commissioners (the “NAIC”) has approved a series of uniform statutory accounting principles ("SAP") that have been adopted, in some cases with minor modifications, by all state insurance regulators.

As a basis of accounting, SAP was developed to monitor and regulate the solvency of insurance companies. In developing SAP, insurance regulators were primarily concerned with assuring an insurer’s ability to pay all its current and future obligations to policyholders. As a result, statutory accounting focuses on conservatively valuing the assets and liabilities of insurers, generally in accordance with standards specified by the insurer’s domiciliary state. The values for assets, liabilities and equity reflected in financial statements prepared in accordance with U.S. GAAP are usually different from those reflected in financial statements prepared under SAP.

State insurance regulators conduct periodic financial examinations of the books, records, accounts and business practices of insurers domiciled in their states, generally every three to five years. Financial examinations are generally carried out in cooperation with the insurance regulators of other states under guidelines promulgated by the NAIC. State and federal insurance and securities regulatory authorities and other state law enforcement agencies and attorneys general also from time to time make inquiries and

conduct examinations or investigations regarding the compliance by our company, as well as other companies in our industry, with, among other things, insurance laws and securities laws.

State insurance regulators, the NAIC and other regulatory bodies are also investigating the use of affiliated captive reinsurers or off-shore entities to reinsure insurance risks and the NAIC has made recent advances in captive reform. In June 2014, the NAIC adopted a new regulatory framework for captives assuming business governed by Regulations XXX or AXXX, called the "Rector framework". In December 2014, the NAIC adopted Actuarial Guideline 48 ("AG48") which established a new regulatory requirement applicable to XXX and AG38 reserves ceded to reinsurers, including affiliated reinsurers, as the first step in implementing the Rector framework. As adopted, AG48 limits the type of assets that may be used as collateral to cover the XXX and AG38 statutory reserves and is applied prospectively to existing reinsurance transactions that reinsure policies issued on or after January 1, 2015 and new reinsurance transactions entered into on or after January 1, 2015. The NAIC has charged multiple working groups with the responsibility to prepare regulations that would codify the Rector framework and that work continues at the NAIC. In 2014, the NAIC also considered a proposal to require states to apply NAIC accreditation standards, applicable to traditional insurers, to captive reinsurers. In 2015, the NAIC adopted such a proposal, in the form of a revised preamble to the NAIC accreditation standards (the "Standard"), with an effective date of January 1, 2016 for application of the Standard to captives that assume XXX or AXXX business. Under the Standard, a state will be deemed in compliance as it relates to XXX or AXXX captives if the applicable reinsurance transaction satisfies AG 48. In addition, the Standard applies prospectively, so that XXX or AXXX captives will not be subject to the Standard if reinsured policies were issued prior to January 1, 2015 and ceded so that they were part of a reinsurance arrangement as of December 31, 2014. The NAIC left for future action application of the Standard to captives that assume variable annuity business. As drafted, it appears that the Standard would apply to our affiliate, Security Life of Denver International Limited, an Arizona captive.

During 2015, The NAIC Financial Conditions (E) Committee (the "E Committee") established the Variable Annuities Issues (E) Working Group ("VAIWG") to oversee the NAIC's efforts to study and address, as appropriate, regulatory issues resulting in variable annuity captive reinsurance transactions. The VAIWG retained Oliver Wyman to study the industry's use of variable annuity captive reinsurance and to develop a set of recommended changes to address the issues involving variable annuity captives. In September 2015, Oliver Wyman issued an initial report, which was adopted by the VAIWG, outlining its preliminary findings and making recommendations for enhancements to the variable annuity statutory framework. In November 2015, upon recommendation of the VAIWG, the E Committee adopted a Variable Annuities Framework for Change (the "VA Framework for Change") which recommends charges for NAIC working groups to adjust the variable annuity statutory framework applicable to all insurers that have written or are writing variable annuity business. The VA Framework for Change contemplates a holistic set of reforms that would improve the current reserve and capital framework and address root cause issues that result in the use of captive arrangements. Although the VA Framework for Change recommends an effective date of January 1, 2017, the timing of these proposals remains uncertain. In November 2015, the NAIC also approved funding for a quantitative impact study, to be conducted by Oliver Wyman and involving industry participants including us, of various reforms outlined in the VA Framework for Change (the "QIS Study").

We cannot predict what revisions, if any, would be made to the Rector framework or the Standard for application to captives that assume XXX or AXXX business, as multiple NAIC working groups undertake their implementation, to the VA Framework for Change proposal as a result of the QIS Study and ongoing NAIC deliberations, or to the Standard, if adopted for variable annuity captives. It is also unclear whether these or other proposals will be adopted by the NAIC, or what additional actions and regulatory changes will result from the continued captives scrutiny and reform efforts by the NAIC and other regulatory bodies. We utilize affiliated captive insurers to satisfy certain statutory reserve requirements related to certain of our variable annuity contracts. If state insurance regulators determine to restrict our use of affiliated captive reinsurers, it could require us to increase statutory reserves, incur higher operating or tax costs or reduce sales. See "Item 1A. Risk Factors - Risks Related to Regulation - Our businesses are heavily regulated, and changes in regulation in the United States, enforcement actions and regulatory investigations may reduce profitability".

Insurance Holding Company Regulation

Because we are part of an affiliated group of companies, we are subject to the insurance holding company law of the State of Iowa, our state of domicile. State insurance holding company law generally requires each insurance company directly or indirectly owned by the holding company to register with the insurance regulator in the insurance company's state of domicile and to furnish annually financial and other information about the operations of companies within the holding company system. Generally, all transactions affecting the insurers in the holding company system must be fair and reasonable and, if material, require prior notice and approval or non-disapproval by the state's insurance regulator.

Change of Control. State insurance holding company regulations, including those of Iowa, generally provide that no person, corporation or other entity may acquire control of an insurance company, or a controlling interest in any parent company of an insurance company, without the prior approval of such insurance company's domiciliary state insurance regulator. Under Iowa law, any person acquiring, directly or indirectly, 10% or more of the voting securities of an insurance company is presumed to have acquired "control" of the company. This statutory presumption of control may be rebutted by a showing that control does not exist in fact. Our Iowa insurance regulators, however, may find that "control" exists in circumstances in which a person owns or controls less than 10% of voting securities.

To obtain approval of any change in control, any proposed acquirer must file with the Iowa Division of Insurance an application disclosing, among other information, its background, financial condition, the financial condition of its affiliates, the source and amount of funds by which it will effect the acquisition, the criteria used in determining the nature and amount of consideration to be paid for the acquisition, proposed changes in the management and operations of the insurance company and other related matters.

Any purchaser of shares of common stock representing 10% or more of the voting power of our capital stock or that of Voya Financial, Inc. will be presumed to have acquired control of our Company unless, following application by that purchaser with the Iowa Division of Insurance, the Insurance Commissioner determines otherwise.

NAIC Amendments. In 2010, the NAIC adopted significant changes to the insurance holding company model act and regulations (the "NAIC Amendments"). The NAIC Amendments include a requirement that an insurance holding company system's ultimate controlling person submit annually to its lead state insurance regulator an "enterprise risk report" that identifies activities, circumstances or events involving one or more affiliates of an insurer that, if not remedied properly, are likely to have a material adverse effect upon the financial condition or liquidity of the insurer or its insurance holding company system as a whole. The NAIC Amendments also include a provision requiring a controlling person to submit prior notice to its domiciliary insurance regulator of a divestiture of control. The NAIC Amendments must be adopted by the individual state legislatures and insurance regulators in order to be effective. Iowa adopted its version of the NAIC Amendments.

In addition, the NAIC has proposed a "Solvency Modernization Initiative" which focuses on: (1) capital requirements; (2) corporate governance and risk management; (3) group supervision; (4) statutory accounting and financial reporting; and (5) reinsurance. This initiative has resulted in the adoption by the NAIC in September 2012 of the Risk Management and Own Risk and Solvency Assessment Model Act ("ORSA"), which has been enacted by the Iowa legislature. ORSA requires that insurers maintain a risk management framework and conduct an internal own risk and solvency assessment of the insurer's material risks in normal and stressed environments. The assessment must be documented in a confidential annual summary report, a copy of which must be made available to regulators as required or upon request. In 2015, Voya Financial, Inc. prepared and submitted the first ORSA summary report on behalf of the consolidated enterprise to the Connecticut Insurance Department, the lead insurance regulator of Voya Financial, Inc.'s consolidated enterprise. This initiative also resulted in the adoption by the NAIC in August 2014 of the Corporate Governance Annual Filing Model Act, which requires insurers to make an annual confidential filing regarding their corporate governance policies. This new model has been enacted by the Iowa legislature.

Dividend Payment Restrictions. The insurance law of an insurance company's state of domicile imposes certain restrictions on a domiciliary insurance company's ability to pay dividends to its parent. These restrictions are based in part on the prior year's statutory income and surplus. In general, dividends up to specified levels are considered ordinary and may be paid without prior approval. Dividends in larger amounts, or extraordinary dividends, are subject to approval by the insurance commissioner of the state of domicile of the insurance subsidiary proposing to pay the dividend. In addition, under Iowa insurance law, no dividend or other distribution exceeding an amount equal to an insurance company's earned surplus may be paid without the domiciliary insurance regulator's prior approval.

Financial Regulation

Policy and Contract Reserve Sufficiency Analysis. Under the laws and regulations of Iowa, we are required to conduct annual analyses of the sufficiency of our life and annuity statutory reserves. Other jurisdictions in which we are licensed may have certain reserve requirements that differ from our state of domicile. In each case, a qualified actuary must submit an opinion that states that the aggregate statutory reserves, when considered in light of the assets held with respect to such reserves, are sufficient to meet the insurer's contractual obligations and related expenses. If such an opinion cannot be rendered, the affected insurer must set up additional statutory reserves by moving funds from available statutory surplus. We submit these opinions annually to applicable insurance regulatory authorities.

Recent actions by the NAIC. The NAIC has begun a process of redefining the reserve methodology for certain of our insurance liabilities under a framework known as Principles-Based Reserving ("PBR"). Under PBR, an insurer's reserves are still required

to be conservative, since a primary focus of SAP is the protection of policyholders, however, greater credence is given to the insurer's realized past experience and anticipated future experience as well as to current economic conditions. An important part of the PBR framework was the adoption of AG43 as of December 31, 2009 for variable annuity guaranteed benefits.

Surplus and Capital Requirements. Insurance regulators have the discretionary authority, in connection with the ongoing licensing of insurance companies, to limit or prohibit the ability of an insurer to issue new policies if, in the regulators' judgment, the insurer is not maintaining a minimum amount of surplus or is in hazardous financial condition. Insurance regulators may also limit the ability of an insurer to issue new life insurance policies and annuity contracts above an amount based upon the face amount and premiums of policies of a similar type issued in the prior year. We do not currently believe that the current or anticipated levels of our statutory surplus present a material risk that any such regulator would limit the amount of new policies that we may issue.

Risk-Based Capital. The NAIC has adopted risk-based capital ("RBC") requirements for life, health and property and casualty insurance companies. The requirements provide a method for analyzing the minimum amount of adjusted capital (statutory capital and surplus plus other adjustments) appropriate for an insurance company to support its overall business operations, taking into account the risk characteristics of the company's assets, liabilities and certain off-balance sheet items. State insurance regulators use the RBC requirements as an early warning tool to identify possibly inadequately capitalized insurers. An insurance company found to have insufficient statutory capital based on its RBC ratio may be subject to varying levels of additional regulatory oversight depending on the level of capital inadequacy. As of December 31, 2015, our RBC exceeded statutory minimum RBC levels that would require any regulatory or corrective action.

The NAIC is currently working with the American Academy of Actuaries as they consider possible updates to the asset risk factors applied to the investment portfolio assets. The NAIC review may lead to an expansion in the number of NAIC asset class categories for factor charges and the adoption of new factors, which could increase capital requirements on some securities and decrease capital requirements on others. We cannot predict what, if any, changes may result from this review or their potential impact on our RBC ratios. We will continue to monitor developments in this area.

IRIS Tests. The NAIC has developed a set of financial relationships or tests known as the Insurance Regulatory Information System ("IRIS") to assist state regulators in monitoring the financial condition of U.S. insurance companies and identifying companies requiring special attention or action. For IRIS ratio purposes, we submit data to the NAIC on an annual basis. The NAIC analyzes this data using prescribed financial data ratios. A ratio falling outside the prescribed "usual range" is not considered a failing result. Rather, unusual values are viewed as part of the regulatory early monitoring system. In many cases, it is not unusual for financially sound companies to have one or more ratios that fall outside the usual range.

Regulators typically investigate or monitor an insurance company if its IRIS ratios fall outside the prescribed usual range for four or more of the ratios, but each state has the right to inquire about any ratios falling outside the usual range. The inquiries made by state insurance regulators into an insurance company's IRIS ratios can take various forms.

Management does not anticipate regulatory action as a result of the 2015 IRIS ratio results. In all instances in prior years, regulators have been satisfied upon follow-up that no regulatory action was required. It is possible that similar results may not occur in the future.

Insurance Guaranty Associations. Each state has insurance guaranty association laws that require insurance companies doing business in the state to participate in various types of guaranty associations or other similar arrangements. The laws are designed to protect policyholders from losses under insurance policies issued by insurance companies that become impaired or insolvent. Typically, these associations levy assessments, up to prescribed limits, on member insurers on the basis of the member insurer's proportionate share of the business in the relevant jurisdiction in the lines of business in which the impaired or insolvent insurer is engaged. Some jurisdictions permit member insurers to recover assessments that they paid through full or partial premium tax offsets, usually over a period of years.

We accrue the cost of future guaranty fund assessments based on estimates of insurance company insolvencies provided by the National Organization of Life and Health Insurance Guaranty Associations and the amount of premiums written in each state. We have estimated this liability to be $1.2 million and $1.6 million as of December 31, 2015 and 2014, respectively. We have also recorded an asset of $1.7 million and $2.3 million as of December 31, 2015 and 2014, respectively, for future credits to premium taxes for assessments already paid. We estimate our liabilities for future assessments under state insurance guaranty association laws. We believe the reserves established are adequate for future assessments relating to insurance companies that are currently subject to insolvency proceedings.

Marketing and Sales

State insurance regulators are becoming more active in adopting and enforcing suitability standards with respect to sales of fixed, indexed and variable annuities. In particular, the NAIC has adopted a revised Suitability in Annuity Transactions Model Regulation ("SAT"), which will, if enacted by the states, place new responsibilities upon issuing insurance companies with respect to the suitability of annuity sales, including responsibilities for training agents. Several states have already enacted laws based on the SAT.

Federal Initiatives Affecting Insurance Operations

The U.S. federal government generally does not directly regulate the insurance business. However, the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act") established the Federal Stability Oversight Council ("FSOC"), which is authorized to designate non-bank financial companies as systemically significant and accordingly subject such companies to regulation and supervision by the Board of Governors of the Federal Reserve System (the "Federal Reserve") if the FSOC determines that material financial distress at the company or the scope of the company's activities could pose a threat to the financial stability of the U.S. See "--Financial Reform Legislation and Initiatives -- Dodd-Frank Wall Street Reform and Consumer Protection Act" below.

The Dodd-Frank Act also established FIO within the United States Department of the Treasury ("Treasury Department"). While not having a general supervisory or regulatory authority over the business of insurance, the director of this office performs various functions with respect to insurance, including serving as a non-voting member of the FSOC, making recommendations to the FSOC regarding insurers to be designated for more stringent regulation as a nonbank financial entity supervised by the Federal Reserve and representing the U.S. in the negotiation of international insurance agreements with foreign insurance regulators. The Dodd-Frank Act also required the director of FIO to conduct a study on how to modernize and improve the system of insurance regulation in the United States. The director issued that report in December 2013, recommending increased federal involvement in certain areas of insurance regulation to improve uniformity, and setting out recommendations in areas of near-term reform for the states, including capital and marketplace oversight. The report also recommended that states develop a uniform and transparent solvency oversight regime for the transfer of risk to reinsurance captives, and adopt a uniform capital requirement for reinsurance captives, including a prohibition on transactions that do not constitute legitimate risk transfer. FIO has an ongoing charge to monitor all aspects of the insurance industry and will monitor state regulatory developments, including those called for in its modernization report and present options for federal involvement if deemed necessary.

Federal legislation and administrative policies in several areas can significantly and adversely affect insurance companies. These areas include federal health care regulation, pension regulation, financial services regulation, federal tax laws relating to life insurance companies and their products and the USA PATRIOT Act of 2001 (the "Patriot Act") requiring, among other things, the establishment of anti-money laundering monitoring programs.

In this regard, from time to time, federal measures are proposed which may significantly affect the insurance business, including measures that would limit antitrust immunity, change the tax treatment of insurance products relative to other financial products, simplify tax-advantaged or tax-exempt savings and retirement vehicles, restructure the corporate income tax provisions, or modify or eliminate the estate tax as well as proposals related to an optional federal charter for insurance companies. In addition, various forms of direct federal regulation of insurance have been proposed in recent years.

Regulation of Annuity Products

Our annuity products are subject to federal and state tax, securities, fiduciary, insurance and other laws and regulations. The SEC, the Financial Industry Regulatory Authority ("FINRA"), state securities commissions, state insurance departments and the Department of Labor ("DOL") and the Treasury Department are the principal regulators that regulate these products. The Dodd-Frank Act may also impact our annuity operations. See "Financial Reform Legislation and Initiatives-Dodd-Frank Wall Street Reform and Consumer Protection Act" below.

We sell variable annuities that are registered with the SEC as securities under the Securities Act of 1933, as amended (the "Securities Act") and are subject to regulation by the SEC and FINRA. In addition, certain fixed and indexed annuities we may offer are registered as securities under the Securities Act. The variable annuity products are issued through separate accounts and some of the separate accounts are registered as investment companies under the Investment Company Act of 1940 (the "Investment Company Act"), and are regulated by state law. Each separate account is generally divided into sub-accounts, each of which invests in an underlying mutual fund which is itself a registered investment company under the Investment Company Act. Such mutual funds, and in certain states, our variable annuity products, are subject to filing and other requirements under state securities laws. Federal

and state securities laws and regulations are primarily intended to protect investors and generally grant broad rulemaking and enforcement powers to regulatory agencies. Federal and state securities regulatory authorities and FINRA from time to time make inquiries and conduct examinations regarding compliance by us and our affiliates with securities and other laws and regulations.

Distribution of our annuity products registered as securities are affected by laws and regulations applicable to broker-dealers. Pursuant to the Dodd-Frank Act, the SEC is authorized to establish a standard of conduct applicable to brokers and dealers whereby they would be required to act in the best interest of the customer without regard to the financial or other interest of the broker or dealer when providing personalized investment advice to retail and other customers. A January 2011 SEC study acknowledges that the offering of proprietary products would not be a per se violation of any such standard of care and that broker-dealers selling proprietary or a limited range of products could be permitted to make certain disclosures about their limited product offerings and obtain customer consents or acknowledgments. The SEC has not yet decided whether to propose rules creating a uniform standard of conduct applicable to broker-dealers and investment advisers.

In April 2015, the DOL published a proposed rule that would broaden the definition of "fiduciary" under the Employee Retirement Income Security Act of 1974, as amended ("ERISA") and for other purposes. The proposal was subject to public comment and we submitted a comment letter to the DOL on July 16, 2015, expressing our views on the proposed rule and participated in a DOL hearing concerning the proposal on August 11, 2015. The DOL's final version of the proposed rule is currently under review by the President's Office of Management and Budget. We currently expect a final rule to be published sometime during the first half of 2016.

As proposed, the rule would expand the circumstances in which providers of investment advice to small plan sponsors, plan participants and beneficiaries, and IRA investors are deemed to act in a fiduciary capacity. The rule would require such providers to act in their clients' "best interests", not influenced by any conflicts of interest, including due to the direct or indirect receipt of compensation. The DOL concurrently proposed a "best interest contract exemption" intended to enable continuation of certain existing industry practices relating to receipt of commissions and other compensation, but the exemption includes conditions and requirements that may make it costly or difficult to rely upon in practice. Although the final outcome of the DOL rulemaking remains uncertain, the proposed rule, if adopted in its current form, would substantially change the legal framework within which we and our affiliates provide certain of our products and services. While these changes, as proposed, would restrict certain advisory practices and compensation arrangements that are common in our industry, we believe our experience providing retirement and investment products and services in a fiduciary environment positions us well to remain competitive as the industry adjusts to any final rulemaking from the DOL.

The SEC also has indicated that it may propose rules creating a uniform standard of conduct applicable to broker-dealers and investment advisers, which, if adopted may affect the distribution of our products. Should the SEC rules, if adopted, not align with any finalized DOL regulations related to conflicts of interest in the provision of investment advice, the distribution of our products could be further complicated.

Financial Reform Legislation and Initiatives

Dodd-Frank Wall Street Reform and Consumer Protection Act

On July 21, 2010, President Obama signed into law the Dodd-Frank Act, which effects comprehensive changes to the regulation of financial services in the United States. The Dodd-Frank Act directs existing and newly-created government agencies and bodies to perform studies and promulgate a multitude of regulations implementing the law, a process that is underway and is expected to continue over the next few years. While some studies have already been completed and the rule-making process is well underway, there continues to be significant uncertainty regarding the results of ongoing studies and the ultimate requirements of those regulations that have not yet been adopted. We cannot predict with certainty how the Dodd-Frank Act and such regulations will affect the financial markets generally, or impact our business, ratings, results of operations, cash flows or financial condition.

The Dodd-Frank Act created a new agency, the FSOC, which is authorized to subject nonbank financial companies to the supervision of the Federal Reserve if the FSOC determines that, among other matters, material financial distress at the company or the scope of the company's activities could pose risks to the financial stability of the United States. If we or Voya Financial, Inc. were designated by the FSOC as a systemically significant nonbank financial company subject to supervision by the Federal Reserve, we would become subject to a comprehensive system of prudential regulation, including minimum capital requirements, liquidity standards, credit exposure requirements, overall risk management requirements, management interlock prohibitions, a requirement to maintain a plan for rapid and orderly dissolution in the event of severe financial distress, stress testing, and additional fees and assessments and restrictions on proprietary trading and certain investments. The exact scope and consequences of these standards and requirements are subject to ongoing rulemaking activity by various federal banking regulators and therefore are currently

unclear. However, this comprehensive system of prudential regulation, if applied to Voya Financial, Inc. or us, would significantly impact the manner in which we operate and could materially and adversely impact the profitability of one or more of our business lines or the level of capital required to support our activities. In designating non-bank financial companies for heightened prudential regulation by the Federal Reserve, the FSOC considers, among other matters, the scope, size and potential impact of their activities on the financial stability of the United States.

In addition, the Dodd-Frank Act contains numerous other provisions, some of which may have an impact on us. These include:

- The FSOC may recommend that state insurance regulators or other regulators apply new or heightened standards and safeguards for activities or practices we and other insurers or other financial services companies engage in if the FSOC determines that those activities or practices could create or increase the risk that significant liquidity, credit or other problems spread among financial companies. We cannot predict whether any such recommendations will be made or their effect on our business, results of operations, cash flows or financial condition.

- The Dodd-Frank Act creates a new framework for regulating over-the-counter ("OTC") derivatives, which may increase the costs of hedging and other permitted derivatives trading activity undertaken by us. Under the new regulatory regime and subject to certain exceptions, certain standardized OTC interest rate and credit derivatives must now be cleared through a centralized clearinghouse and executed on a centralized exchange or execution facility, and the CFTC and the SEC may designate additional types of OTC derivatives for mandatory clearing and trade execution requirements in the future. In addition to mandatory central clearing and trade execution of certain OTC derivatives, market participants like us are or will be (directly or indirectly) subject to regulatory requirements which may include reporting and recordkeeping, and capital and margin requirements. The transition to central clearing and the new regulatory regime governing OTC derivatives (especially margin requirements for non-cleared derivatives) presents potentially significant business, liquidity and operational risk for us which could materially and adversely impact both the cost and our ability to effectively hedge various risks, including equity, interest rate, currency and duration risks within many of our insurance and annuity products and investment portfolios. In addition, inconsistencies between the Dodd-Frank Act regime and parallel regimes in other jurisdictions, such as the EU, may increase costs of hedging or inhibit our ability to access market liquidity in those other jurisdictions.

- The Dodd-Frank Act established FIO within the Treasury Department to be headed by a director appointed by the Secretary of the Treasury. See "Insurance Regulation-Federal Initiatives Affecting Insurance Operations" above.

- The Dodd-Frank Act includes various securities law reforms that may affect our business practices and the liabilities and/or exposures associated therewith. See "Regulation of Annuity Products" above.

Until final regulations are promulgated pursuant to the Dodd-Frank Act, the full impact of the Dodd-Frank Act on our businesses, products, results of operation and financial condition will remain unclear.

Other Laws and Regulations

USA Patriot Act

The Patriot Act contains anti-money laundering and financial transparency laws applicable to broker-dealers and other financial services companies, including insurance companies. The Patriot Act seeks to promote cooperation among financial institutions, regulators and law enforcement entities in identifying parties that may be involved in terrorism or money laundering. Anti-money laundering laws outside of the United States contain provisions that may be different, conflicting or more rigorous. Internal practices, procedures and controls are required to meet the increased obligations of financial institutions to identify their customers, watch for and report suspicious transactions, respond to requests for information by regulatory authorities and law enforcement agencies and share information with other financial institutions.

We are also required to follow certain economic and trade sanctions programs administered by the Office of Foreign Asset Control that prohibit or restrict transactions with suspected countries, their governments and, in certain circumstances, their nationals. We are also subject to regulations governing bribery and other anti-corruption measures.

Privacy Laws and Regulation

U.S. federal and state laws and regulations require financial institutions, including insurance companies, to protect the security and confidentiality of personal information and to notify consumers about their policies and practices relating to their collection

and disclosure of consumer information and the protection of the security and confidentiality of that information. The disclosure and security of protected health information is also governed by federal and state laws. In particular, regulations promulgated by the U.S. Department of Health and Human Services regulate the disclosure and use of protected health information by health insurers and others (including life insurers), the physical and procedural safeguards employed to protect the security of that information and the electronic transmission of such information. Federal and state laws require notice to affected individuals, law enforcement, regulators and others if there is a breach of the security of certain personal information, including social security numbers, and require holders of certain personal information to protect the security of the data. Federal regulations require financial institutions to implement effective programs to detect, prevent and mitigate identity theft. Federal and state laws and regulations regulate the ability of financial institutions to make telemarketing calls and to send unsolicited e-mail or fax messages to consumers and customers. Federal laws and regulations also regulate the permissible uses of certain types of personal information, including consumer report information. Federal and state governments and regulatory bodies may consider additional or more detailed regulation regarding these subjects.

Environmental Considerations

Our ownership and operation of real property and properties within our commercial mortgage loan portfolio is subject to federal, state and local environmental laws and regulations. Risks of hidden environmental liabilities and the costs of any required clean-up are inherent in owning and operating real property. Under the laws of certain states, contamination of a property may give rise to a lien on the property to secure recovery of the costs of clean-up, which could adversely affect the valuation of, and increase the liabilities associated with, the commercial mortgage loans we hold. In several states, this lien has priority over the lien of an existing mortgage against such property. In addition, we may be liable, in certain circumstances, as an “owner” or “operator,” for costs of cleaning-up releases or threatened releases of hazardous substances at a property mortgaged to us under the federal Comprehensive Environmental Response, Compensation and Liability Act of 1980 and the laws of certain states. Application of various other federal and state environmental laws could also result in the imposition of liability on us for costs associated with environmental hazards.

We routinely conduct environmental assessments prior to closing any new commercial mortgage loans or to taking title to real estate. Although unexpected environmental liabilities can always arise, we seek to minimize this risk by undertaking these environmental assessments and complying with our internal environmental policies and procedures.

U.S. Supreme Court Decision Regarding Same-Sex Marriage

On June 26, 2015, the United States Supreme Court held in *Obergefell v. Hodges* that same-sex couples have a constitutional right to marry, and accordingly, marriages between same-sex couples may now be celebrated, and will now be recognized in all 50 states. We expect this decision to result in changes to the administration of retirement and other benefit plans in various U.S. states, although we cannot predict with certainty how these changes will affect our business. In particular, it is possible that changes to our tax reporting and withholding systems will be required in order to comply with applicable state tax regulations.

Item 1A. Risk Factors
(Dollar amounts in millions, unless otherwise stated)

We face a variety of risks that are substantial and inherent in our business, including market, liquidity, credit, operational, legal, regulatory and reputational risks. The following are some of the more important factors that could affect our business.

Risks Related to Our Business - General

Continued difficult conditions in the global capital markets and the economy generally have affected and may continue to affect our business, results of operations and financial condition.

Our business and results of operations are materially affected by conditions in the global capital markets and the economy generally. Slowing growth rates globally and the uncertain consequences of changing monetary policies among the world's large central banks could create economic disruption, decrease asset prices, increase market volatility and potentially affect the availability and cost of credit.

Although we carry out business almost exclusively in the United States, we are affected by both domestic and international macroeconomic developments. In the short and medium term, the U.S. market faces difficulties that include persistent weakness in economic growth, volatility in asset prices and questions surrounding the program announced by the Federal Open Market Committee ("FOMC") of the Federal Reserve to gradually tighten monetary policy. In the longer term, concerns persist around the long-term sustainability of the nation's debt profile, especially given expectations regarding future entitlement spending and persistent budget deficits, the effect on the financial system of the significant regulatory changes enacted in the aftermath of the 2008-09 financial crisis, and the consequences of increasing Federal legislative gridlock, in particular on tax and fiscal policy.

Internationally, slowing levels of growth in developing markets, in particular in China, could have significant adverse consequences for the level of global economic activity, and on commodity and other asset markets. In turn, falling commodity and energy prices can give rise to significant dislocations in global credit and currency markets, as the consequences of lower prices, revenues and asset prices are felt by borrowers and exporters, and in turn creditors and investors. In addition, the Chinese market faces concerns surrounding the stability of its credit, equity and real estate markets, and any crisis in these markets could have global consequences.

In Europe, although acute concerns regarding the economic and fiscal viability of countries such as Greece have to some extent abated, long-term structural headwinds remain in the Eurozone's move towards a closer currency, fiscal, economic and monetary union, and significant concerns persist regarding the sovereign debt of Greece and certain other Eurozone countries. In recent times, political events have increasingly threatened the cohesiveness of the European Union, and may ultimately result in the cessation or rollback of the political and economic integration of Europe that has occurred over the past several decades. In particular, the United Kingdom is expected to hold a referendum by 2017 on its future role within Europe, the outcome of which could have substantial adverse consequences for the U.K. and European economies. The financial and political turmoil in Europe continues to be a long-term threat to global capital markets and remains a challenge to global financial stability. If countries, such as Greece, require additional financial support or if their sovereign credit ratings decline further, yields on such sovereign debt may increase, the cost of borrowing may increase and the availability of credit may become more limited. Additionally, the possibility of capital market volatility spreading through a highly integrated and interdependent banking system remains elevated. In the event of any default or similar event with respect to a sovereign issuer, some financial institutions may suffer significant losses for which they would require additional capital, which may not be available.

In 2015, the FOMC began to tighten U.S. monetary policy as it seeks to gradually reverse programs and policies that have, in recent years, fostered a historically low interest rate environment. The effect of this effort, and the novel mechanism through which the FOMC is implementing it, remains uncertain, and could include increased volatility in debt, equity, currency and commodity markets. As the FOMC moves towards normalizing monetary policy and moving short-term interest rates off of their lower bound, the central bank may adversely affect prospects for continued economic recovery with little headroom for incremental monetary accommodation. Any increase in interest rates resulting from the FOMC's monetary policy would generally result in declining values for fixed income investments, including those we hold in our investment portfolio. A failure to successfully implement a tightening policy, on the other hand, could lead to a continued persistence of low interest rates and an associated adverse effect on certain of our long-dated liabilities and the reserves we are required to hold against them. Our results of operations, investment portfolio and AUM are exposed to these risks and may be adversely affected as a result.

More generally, the international system has in recent years faced heightened geopolitical risk, most notably in Eastern Europe and the Middle East, but also in Africa and Southeast Asia, and events in any one of these regions could give rise to an increase in market volatility or a decrease in global economic output.

Even in the absence of a market downturn, our annuity, retirement and investment products, as well as our investment returns and our access to and cost of financing, are sensitive to equity, fixed income, real estate and other market fluctuations and general economic and political conditions. These fluctuations and conditions could materially and adversely affect our results of operations, financial condition and liquidity, including in the following respects:

- We provide a number of annuity, retirement and investment products that expose us to risks associated with fluctuations in interest rates, market indices, securities prices, default rates, the value of real estate assets, currency exchange rates and credit spreads. The profitability of many of our annuity, retirement and investment products depends in part on the value of the general accounts and separate accounts supporting them, which may fluctuate substantially depending on the foregoing conditions.
- Volatility or downturns in the equity markets can cause a reduction in fee income on annuity products. Because these products generate fees related primarily to the value of AUM, a decline in the equity markets could reduce our revenues.
- A change in market conditions, including prolonged periods of high or low inflation or interest rates, could cause a change in consumer sentiment and adversely affect sales and could cause the actual persistency of these products to vary from their anticipated persistency (the probability that a product will remain in force from one period to the next) and adversely affect profitability. Changing economic conditions or adverse public perception of financial institutions can influence customer behavior, which can result in, among other things, an increase or decrease in claims, lapses, withdrawals, deposits or surrenders in certain products, any of which could adversely affect profitability.
- An equity market decline, decreases in prevailing interest rates or a prolonged period of low interest rates could result in the value of guaranteed minimum benefits contained in certain of our life insurance, annuity and retirement products being higher than current account values or higher than anticipated in our pricing assumptions, requiring us to materially increase reserves for such products, and may result in a decrease in customer lapses, thereby increasing the cost to us. In addition, such a scenario could lead to increased amortization and/or unfavorable unlocking of our deferred acquisition costs ("DAC") and value of business acquired ("VOBA").
- We have significant investment and derivative portfolios that include, among other investments, corporate securities, asset-backed securities ("ABS"), equities and commercial mortgages. Economic conditions as well as adverse capital market and credit conditions, interest rate changes, changes in mortgage prepayment behavior or declines in the value of underlying collateral will impact the credit quality, liquidity and value of our investment and derivative portfolios, potentially resulting in higher capital charges and unrealized or realized losses and decreased investment income. The value of our investments and derivative portfolios may also be impacted by reductions in price transparency, changes in the assumptions or methodology we use to estimate fair value and changes in investor confidence or preferences, which could potentially result in higher realized or unrealized losses and have a material adverse effect on our results of operations or financial condition. Market volatility may also make it difficult to value certain of our securities if trading becomes less frequent.
- Market conditions determine the availability and cost of the reinsurance protection we purchase and may result in additional expenses for reinsurance or an inability to obtain sufficient reinsurance on acceptable terms, which could adversely affect the profitability of future business and the availability of capital to support new sales.
- Hedging instruments we use to manage product and other risks might not perform as intended or expected, which could result in higher realized losses and unanticipated cash needs to collateralize or settle such transactions. Adverse market conditions can limit the availability and increase the costs of hedging instruments, and such costs may not be recovered in the pricing of the underlying products being hedged. In addition, hedging counterparties may fail to perform their obligations resulting in unhedged exposures and losses on positions that are not collateralized.
- Regardless of market conditions, certain investments we hold, including privately placed fixed income investments, investments in private equity funds and commercial mortgages, are relatively illiquid. If we need to sell these investments, we may have difficulty selling them in a timely manner or at a price equal to what we could otherwise realize by holding the investment to maturity.
- We are exposed to interest rate and equity risk based upon the discount rate and expected long-term rate of return assumptions associated with our pension and other retirement benefit obligations. Sustained declines in long-term interest rates or equity returns could have a negative effect on the funded status of these plans and/or increase our future funding costs.
- Fluctuations in our operating results and realized and unrealized gains and losses on our investment and derivative portfolio may impact our tax profile, our ability to optimally utilize tax attributes and our deferred income tax assets. See "Our ability to use beneficial U.S. tax attributes is subject to limitations."
- A default by any financial institution or by a sovereign could lead to additional defaults by other market participants. The failure of a sufficiently large and influential institution could disrupt securities markets or clearance and settlement systems and lead to a chain of defaults, because the commercial and financial soundness of many financial institutions may be

closely related as a result of credit, trading, clearing or other relationships. Even the perceived lack of creditworthiness of a counterparty may lead to market-wide liquidity problems and losses or defaults by us or by other institutions. This risk is sometimes referred to as "systemic risk" and may adversely affect financial intermediaries, such as clearing agencies, clearing houses, banks, securities firms and exchanges with which we interact on a daily basis. Systemic risk could have a material adverse effect on our ability to raise new funding and on our business, results of operations, financial condition, liquidity and/or business prospects. In addition, such a failure could impact future product sales as a potential result of reduced confidence in the financial services industry. Regulatory changes implemented to address systemic risk could also cause market participants to curtail their participation in certain market activities, which could decrease market liquidity and increase trading and other costs.

- Widening credit spreads, if not offset by equal or greater declines in the risk-free interest rate, would also cause the total interest rate payable on newly issued securities to increase, and thus would have the same effect as an increase in underlying interest rates with respect to the valuation of our current portfolio.

Adverse capital and credit market conditions may impact our ability to access liquidity and capital, as well as the cost of credit and capital.

Adverse capital market conditions may affect the availability and cost of borrowed funds, thereby impacting our ability to support or grow our businesses. We need liquidity to pay our operating expenses, interest on our debt and dividends to our parent, to maintain our securities lending activities and to replace certain maturing liabilities. Without sufficient liquidity, we will be forced to curtail our operations and our business will suffer. Our principal sources of liquidity are insurance premiums and fees, annuity deposits and cash flow from investments and assets.

In the event current resources do not satisfy our needs, we may have to seek additional financing. The availability of additional financing will depend on a variety of factors such as market conditions, the general availability of credit, the volume of trading activities, the overall availability of credit to the financial services industry and our credit ratings and credit capacity, as well as the possibility that customers or lenders could develop a negative perception of our long- or short-term financial prospects. Similarly, our access to funds may be limited if regulatory authorities or rating agencies take negative actions against us. If our internal sources of liquidity prove to be insufficient, there is a risk that we may not be able to successfully obtain additional financing on favorable terms, or at all. Any actions we might take to access financing may cause rating agencies to reevaluate our ratings.

Disruptions, uncertainty or volatility in the capital and credit markets, such as that experienced over the past few years, may also limit our access to capital. Such market conditions may in the future limit our ability to raise additional capital to support business growth, or to counter-balance the consequences of losses or increased regulatory reserves and rating agency capital requirements. This would have the potential to decrease both our profitability and our financial flexibility. Our results of operations, financial condition, liquidity, statutory capital and rating agency capital position could be materially and adversely affected by disruptions in the financial markets.

The level of interest rates may adversely affect our profitability, particularly in the event of a continuation of the current low interest rate environment or a period of rapidly increasing interest rates.

Interest rates have remained at historical lows for an extended period and, although the Federal Reserve has recently moved to marginally increase short-term interest rates, medium- and long-term interest rates have remained at historically low levels. In addition, central banks in Europe and Japan have recently pursued largely unprecedented negative interest rate policies, the consequences of which are uncertain.

During periods of declining interest rates or a prolonged period of low interest rates, life insurance and annuity products may be relatively more attractive to consumers due to minimum guarantees that are frequently mandated by regulators, resulting in increased premium payments on products with flexible premium features and a higher percentage of insurance and annuity contracts remaining in force from year-to-year than we anticipated in our pricing, potentially resulting in greater claims costs than we expected and asset/liability cash flow mismatches. A decrease in interest rates or a prolonged period of low interest rates may also require additional provisions for guarantees included in life insurance and annuity contracts, as the guarantees become more valuable to policyholders. During a period of decreasing interest rates or a prolonged period of low interest rates, our investment earnings may decrease because the interest earnings on our recently purchased fixed income investments will likely have declined in parallel with market interest rates. In addition, a prolonged low interest rate period may result in higher costs for certain derivative instruments that may be used to hedge certain of our product risks. RMBS and callable fixed income securities in our investment portfolios will be more likely to be prepaid or redeemed as borrowers seek to borrow at lower interest rates. Consequently, we may be required to reinvest the proceeds in securities bearing lower interest rates. Accordingly, during periods of declining interest rates, our profitability may suffer as the result of a decrease in the spread between interest rates credited to policyholders and

contract owners and returns on our investment portfolios. An extended period of declining or prolonged low interest rates or a prolonged period of low interest rates may also cause us to change our long-term view of the interest rates that we can earn on our investments. Such a change in our view would cause us to change the long-term interest rate that we assume in our calculation of insurance assets and liabilities under U.S. GAAP. This revision would result in increased reserves, accelerated amortization of DAC and other unfavorable consequences. In addition, certain statutory capital and reserve requirements are based on formulas or models that consider interest rates, and an extended period of low interest rates may increase the statutory capital we are required to hold and the amount of assets we must maintain to support statutory reserves.

We believe a continuation of the current low interest rate environment would also negatively affect our financial performance. In addition, we expect that a continuation of the current low interest rate environment would reduce our Company's risk-based capital ratio in an amount that could be material.

Conversely, in periods of rapidly increasing interest rates, policy loans, and withdrawals from, and/or surrenders of, life insurance and annuity contracts and certain guaranteed investment contracts may increase as policyholders choose to seek higher investment returns. Obtaining cash to satisfy these obligations may require us to liquidate fixed income investments at a time when market prices for those assets are depressed because of increases in interest rates. This may result in realized investment losses. Regardless of whether we realize an investment loss, such cash payments would result in a decrease in total invested assets and may decrease our net income and capitalization levels. Premature withdrawals may also cause us to accelerate amortization of DAC, which would also reduce our net income. An increase in market interest rates could also have a material adverse effect on the value of our investment portfolio by, for example, decreasing the estimated fair values of the fixed income securities within our investment portfolio. An increase in market interest rates could also create a significant collateral posting requirement associated with our interest rate hedge programs and Federal Home Loan Bank ("FHLB") funding agreements, which could materially and adversely affect liquidity. In addition, an increase in market interest rates could require us to pay higher interest rates on debt securities we may issue in the financial markets from time to time to finance our operations, which would increase our interest expenses and reduce our results of operations. An increase in interest rates could result in decreased fee income associated with a decline in the value of variable annuity account balances invested in fixed income funds, which also might affect the value of the underlying guarantees within these variable annuities. Lastly, certain statutory reserve requirements are based on formulas or models that consider forward interest rates and an increase in forward interest rates may increase the statutory reserves we are required to hold thereby reducing statutory capital.

Changes in prevailing interest rates may negatively affect our business including the level of net interest margin we earn. In a period of changing interest rates, interest expense may increase and interest credited to policyholders may change at different rates than the interest earned on assets. Accordingly, changes in interest rates could decrease net interest margin. Changes in interest rates may negatively affect the value of our assets and our ability to realize gains or avoid losses from the sale of those assets, all of which also ultimately affect earnings. In addition, our insurance and annuity products and certain of our retirement and investment products are sensitive to inflation rate fluctuations. A sustained increase in the inflation rate in our principal markets may also negatively affect our business, financial condition and results of operation. For example, a sustained increase in the inflation rate may result in an increase in nominal market interest rates. A failure to accurately anticipate higher inflation and factor it into our product pricing assumptions may result in mispricing of our products, which could materially and adversely impact our results of operations.

A downgrade or a potential downgrade in our financial strength or credit ratings could result in a loss of business and adversely affect our results of operations and financial condition.

Ratings are important to our business. Credit ratings represent the opinions of rating agencies regarding an entity's ability to repay its indebtedness. Our credit ratings are important to our ability to raise capital through the issuance of debt and to the cost of such financing. Financial strength ratings, which are sometimes referred to as "claims-paying" ratings, represent the opinions of rating agencies regarding the financial ability of an insurance company to meet its obligations under an insurance policy. Financial strength ratings are important factors affecting public confidence in insurers. Our financial strength ratings are important to our ability to sell our products and services to our customers. Ratings are not recommendations to buy our securities. Each of the rating agencies reviews its ratings periodically, and our current ratings may not be maintained in the future.

Our ratings could be downgraded at any time and without notice by any rating agency. For a description of material rating actions that have occurred from the end of 2014 through the date of this Annual Report on Form 10-K, see "Item 7. Management's Narrative Analysis of the Results of Operations and Financial Condition-Liquidity and Capital Resources-Ratings."

A downgrade of our financial strength rating could affect our competitive position by making it more difficult for us to market our products as potential customers may select companies with higher financial strength ratings and by leading to increased withdrawals

by current customers seeking companies with higher financial strength ratings. This could lead to a decrease in AUM and result in lower fee income. Furthermore, sales of assets to meet customer withdrawal demands could also result in losses, depending on market conditions. In addition, a downgrade in either our financial strength or credit ratings could potentially, among other things, increase our borrowing costs and make it more difficult to access financing; adversely affect the availability of LOCs and other financial guarantees; result in additional collateral requirements, or other required payments or termination rights under derivative contracts or other agreements; and/or impair, or cause the termination of, our relationships with creditors, broker-dealers, distributors, reinsurers or trading counterparties, which could potentially negatively affect our profitability, liquidity and/or capital. In addition, we use assumptions of market participants in estimating the fair value of our liabilities, including insurance liabilities that are classified as embedded derivatives under U.S. GAAP. These assumptions include our nonperformance risk (i.e., the risk that the obligations will not be fulfilled). Therefore, changes in our credit or financial strength ratings or the credit or financial strength ratings of Voya Financial, Inc. may affect the fair value of our liabilities.

As rating agencies continue to evaluate the financial services industry, it is possible that rating agencies will heighten the level of scrutiny that they apply to financial institutions, increase the frequency and scope of their credit reviews, request additional information from the companies that they rate and potentially adjust upward the capital and other requirements employed in the rating agency models for maintenance of certain ratings levels. It is possible that the outcome of any such review of us would have additional adverse ratings consequences, which could have a material adverse effect on our results of operations, financial condition and liquidity. We may need to take actions in response to changing standards or capital requirements set by any of the rating agencies which could cause our business and operations to suffer. We cannot predict what additional actions rating agencies may take, or what actions we may take in response to the actions of rating agencies.

Because we operate in highly competitive markets, we may not be able to increase or maintain our market share, which may have an adverse effect on our results of operations and financial condition.

In each of our businesses we face intense competition, including from domestic and foreign insurance companies, broker-dealers, financial advisors, asset managers and diversified financial institutions, banks, technology companies and start-up financial services providers, both for the ultimate customers for our products and for distribution through independent distribution channels. We compete based on a number of factors including brand recognition, reputation, quality of service, quality of investment advice, investment performance of our products, product features, scope of distribution, price, perceived financial strength and credit ratings, scale and level of customer service. A decline in our competitive position as to one or more of these factors could adversely affect our profitability. In addition, we may in the future sacrifice our competitive or market position in order to improve our profitability. Many of our competitors are large and well-established and some have greater market share or breadth of distribution, offer a broader range of products, services or features, assume a greater level of risk, or have higher claims-paying or credit ratings than we do. Furthermore, the preferences of the end consumers for our products and services may shift, including as a result of technological innovations affecting the marketplaces in which we operate. To the extent our competitors are more successful than we are at adopting new technology and adapting to the changing preferences of the marketplace, our competitiveness may decline.

In recent years, there has been substantial consolidation among companies in the financial services industry resulting in increased competition from large, well-capitalized financial services firms. Future economic turmoil may accelerate additional consolidation activity. Many of our competitors also have been able to increase their distribution systems through mergers, acquisitions, partnerships or other contractual arrangements. Furthermore, larger competitors may have lower operating costs and have an ability to absorb greater risk, while maintaining financial strength ratings, allowing them to price products more competitively. These competitive pressures could result in increased pressure on the pricing of certain of our products and services, and could harm our ability to maintain or increase profitability. In addition, if our financial strength and credit ratings are lower than our competitors, we may experience increased surrenders and/or a significant decline in sales. The competitive landscape in which we operate may be further affected by the government sponsored programs or regulatory changes in the United States and similar governmental actions outside of the United States. Competitors that receive governmental financing, guarantees or other assistance, or that are not subject to the same regulatory constraints, may have or obtain pricing or other competitive advantages. Due to the competitive nature of the financial services industry, there can be no assurance that we will continue to effectively compete within the industry or that competition will not have a material adverse impact on our business, results of operations and financial condition.

Our risk management policies and procedures, including hedge programs, may prove inadequate for the risks we face, which could negatively affect our business and financial condition or result in losses.

We have developed risk management policies and procedures, including hedge programs that utilize derivative financial instruments, and expect to continue to do so in the future. Nonetheless, our policies and procedures to identify, monitor and manage risks may not be fully effective, particularly during extremely turbulent times. Many of our methods of managing risk and exposures are based upon observed historical market behavior or statistics based on historical models. As a result, these methods may not

predict future exposures, which could be significantly greater than historical measures indicate. Other risk management methods depend on the evaluation of information regarding markets, customers, catastrophe occurrence or other matters that is publicly available or otherwise accessible to us. This information may not always be accurate, complete, up-to-date or properly evaluated. Management of operational, legal and regulatory risks requires, among other things, policies and procedures to record and verify large numbers of transactions and events. These policies and procedures may not be fully effective.

Recently, central monetary authorities in Japan and Europe have adopted negative interest rate policies, and the FOMC has not ruled out the possibility that it may in the future adopt such policies in the United States. Because of the novelty that negative interest rates would present, it is possible that such rates would adversely affect the functionality of our actuarial, risk and other models. This could lead to disruptions in our hedging and other risk management programs, or have other unforeseen consequences.

We employ various strategies, including hedging and reinsurance, with the objective of mitigating risks inherent in our business and operations. These risks include current or future changes in the fair value of our assets and liabilities, current or future changes in cash flows, the effect of interest rates, equity markets and credit spread changes, the occurrence of credit defaults, currency fluctuations and changes in mortality and longevity. We seek to control these risks by, among other things, entering into reinsurance contracts and derivative instruments, such as swaps, options, futures and forward contracts. See "Reinsurance subjects us to the credit risk of reinsurers and may not be available, affordable or adequate to protect us against losses" for a description of risks associated with our use of reinsurance. Developing an effective strategy for dealing with these risks is complex, and no strategy can completely insulate us from such risks. Our hedging strategies also rely on assumptions and projections regarding our assets, liabilities, general market factors and the creditworthiness of our counterparties that may prove to be incorrect or prove to be inadequate. Accordingly, our hedging activities may not have the desired beneficial impact on our results of operations or financial condition. Hedging strategies involve transaction costs and other costs, and if we terminate a hedging arrangement, we may also be required to pay additional costs, such as transaction fees or breakage costs. We may incur losses on transactions after taking into account our hedging strategies. In particular, certain of our hedging strategies focus on the protection of regulatory and rating agency capital, rather than U.S. GAAP earnings. Because our regulatory capital and rating agency capital react differently to market movements than our Variable Annuity Guarantee Hedge Program target, we have executed a capital hedge overlay ("CHO") program to generally target these differences. As U.S. GAAP accounting differs from the methods used to determine regulatory reserves and rating agency capital requirements, our hedge programs may create earnings volatility in our U.S. GAAP financial statements. Further, the nature, timing, design or execution of our hedging transactions could actually increase our risks and losses. Our hedging strategies and the derivatives that we use, or may use in the future, may not adequately mitigate or offset the hedged risk and our hedging transactions may result in losses.

Past or future misconduct by our employees, agents, intermediaries, representatives of our broker-dealer affiliates or employees of our vendors could result in violations of law by us, regulatory sanctions and/or serious reputational or financial harm and the precautions we take to prevent and detect this activity may not be effective in all cases. Although we employ controls and procedures designed to monitor associates' business decisions and to prevent us from taking excessive or inappropriate risks, associates may take such risks regardless of such controls and procedures. Our compensation policies and practices are reviewed by us as part of our overall risk management program, but it is possible that such compensation policies and practices could inadvertently incentivize excessive or inappropriate risk taking. If our associates take excessive or inappropriate risks, those risks could harm our reputation and have a material adverse effect on our results of operations and financial condition.

The inability of counterparties to meet their financial obligations could have an adverse effect on our results of operations.

Third parties that owe us money, securities or other assets may not pay or perform under their obligations. These parties include the issuers or guarantors of securities we hold, customers, reinsurers, trading counterparties, securities lending and repurchase counterparties, counterparties under swaps, credit default and other derivative contracts, clearing agents, exchanges, clearing houses and other financial intermediaries. Defaults by one or more of these parties on their obligations to us due to bankruptcy, lack of liquidity, downturns in the economy or real estate values, operational failure or other factors, or even rumors about potential defaults by one or more of these parties, could have a material adverse effect on our results of operations, financial condition and liquidity.

We routinely execute a high volume of transactions such as unsecured debt instruments, derivative transactions and equity investments with counterparties and customers in the financial services industry, including broker-dealers, commercial and investment banks, mutual and hedge funds, institutional clients, futures clearing merchants, swap dealers, insurance companies and other institutions, resulting in large periodic settlement amounts which may result in our having significant credit exposure to one or more of such counterparties or customers. Many of these transactions comprise derivative instruments with a number of counterparties in order to hedge various risks, including equity and interest rate market risk features within many of our insurance and annuity products. Our obligations under our products are not changed by our hedging activities and we are liable for our obligations even if our derivative counterparties do not pay us. As a result, we face concentration risk with respect to liabilities

or amounts we expect to collect from specific counterparties and customers. A default by, or even concerns about the creditworthiness of, one or more of these counterparties or customers could have an adverse effect on our results of operations or liquidity. There is no assurance that losses on, or impairments to the carrying value of, these assets due to counterparty credit risk would not materially and adversely affect our business, results of operations or financial condition.

We are also subject to the risk that our rights against third parties may not be enforceable in all circumstances. The deterioration or perceived deterioration in the credit quality of third parties whose securities or obligations we hold could result in losses and/or adversely affect our ability to rehypothecate or otherwise use those securities or obligations for liquidity purposes. While in many cases we are permitted to require additional collateral from counterparties that experience financial difficulty, disputes may arise as to the amount of collateral we are entitled to receive and the value of pledged assets. Our credit risk may also be exacerbated when the collateral we hold cannot be realized or is liquidated at prices not sufficient to recover the full amount of the loan or derivative exposure that is due to us, which is most likely to occur during periods of illiquidity and depressed asset valuations, such as those experienced during the financial crisis of 2008-09. The termination of contracts and the foreclosure on collateral may subject us to claims for the improper exercise of rights under the contracts. Bankruptcies, downgrades and disputes with counterparties as to the valuation of collateral tend to increase in times of market stress and illiquidity.

Requirements to post collateral or make payments related to changes in market value of specified assets may adversely affect liquidity.

The amount of collateral we may be required to post under short-term financing agreements, FHLB funding agreements and derivative transactions may increase under certain circumstances. Pursuant to the terms of some transactions, we could be required to make payment to our counterparties related to any change in the market value of the specified collateral assets. Such requirements could have an adverse effect on liquidity. Furthermore, with respect to any such payments, we may have unsecured risk to the counterparty as these amounts may not be required to be segregated from the counterparty's other funds, may not be held in a third-party custodial account and may not be required to be paid to us by the counterparty until the termination of the transaction. Additionally, the implementation of the Dodd-Frank Act and the resultant changes in collateral requirements may increase the need for liquidity and eligible collateral assets in excess of what is already being held.

Our investment portfolio is subject to several risks that may diminish the value of our invested assets and the investment returns credited to customers, which could reduce our sales, revenues, AUM, results of operations and financial condition.

Fixed income securities represent a significant portion of our investment portfolio. We are subject to the risk that the issuers, or guarantors, of fixed income securities we own may default on principal and interest payments they owe us. We are also subject to the risk that the underlying collateral within asset-backed securities, including mortgage-backed securities, may default on principal and interest payments causing an adverse change in cash flows. The occurrence of a major economic downturn, acts of corporate malfeasance, widening mortgage or credit spreads, or other events that adversely affect the issuers, guarantors or underlying collateral of these securities could cause the estimated fair value of our fixed income securities portfolio and our earnings to decline and the default rate of the fixed income securities in our investment portfolio to increase. A ratings downgrade affecting issuers or guarantors of securities in our investment portfolio, or similar trends that could worsen the credit quality of such issuers, or guarantors could also have a similar effect. Similarly, a ratings downgrade affecting a security we hold could indicate the credit quality of that security has deteriorated and could increase the capital we must hold to support that security to maintain our RBC ratio. See -"A decrease in our RBC ratio (as a result of a reduction in statutory surplus and/or increase in RBC requirements) could result in increased scrutiny by insurance regulators and rating agencies and have a material adverse effect on our business, results of operations and financial condition." We are also subject to the risk that cash flows resulting from the payments on pools of mortgages that serve as collateral underlying the mortgage-backed securities we own may differ from our expectations in timing or size. Cash flow variability arising from an unexpected acceleration in mortgage prepayment behavior can be significant, and could cause a decline in the estimated fair value of certain "interest-only" securities within our mortgage-backed securities portfolio. Any event reducing the estimated fair value of these securities, other than on a temporary basis, could have a material adverse effect on our business, results of operations and financial condition.

From time to time we invest our capital to seed a particular investment strategy or investment portfolio. We may also co-invest in funds or take an equity ownership interest in certain structured finance/investment vehicles that are managed by our affiliates. Any decrease in the value of such investments could negatively affect our revenues and income.

Some of our investments are relatively illiquid and in some cases are in asset classes that have been experiencing significant market valuation fluctuations.

We hold certain assets that may lack liquidity, such as privately placed fixed income securities, commercial mortgage loans, policy loans and limited partnership interests. These asset classes represented 28.8% of the carrying value of our total cash and invested assets as of December 31, 2015. If we require significant amounts of cash on short notice in excess of normal cash requirements or are required to post or return collateral in connection with our investment portfolio, derivatives transactions or securities lending activities, we may have difficulty selling these investments in a timely manner, be forced to sell them for less than we otherwise would have been able to realize, or both.

The reported values of our relatively illiquid types of investments do not necessarily reflect the current market price for the asset. If we were forced to sell certain of our assets in the current market, there can be no assurance that we would be able to sell them for the prices at which we have recorded them and we might be forced to sell them at significantly lower prices.

We invest a portion of our invested assets in investment funds, many of which make private equity investments. The amount and timing of income from such investment funds tends to be uneven as a result of the performance of the underlying investments, including private equity investments. The timing of distributions from the funds, which depends on particular events relating to the underlying investments, as well as the funds' schedules for making distributions and their needs for cash, can be difficult to predict. As a result, the amount of income that we record from these investments can vary substantially from quarter to quarter. Recent equity and credit market volatility may reduce investment income for these types of investments.

Defaults or delinquencies in our commercial mortgage loan portfolio may adversely affect our profitability and financial condition.

The commercial mortgage loans we hold face both default and delinquency risk. We establish loan specific estimated impairments at the balance sheet date. These impairments are based on the excess carrying value of the loan over the present value of expected future cash flows discounted at the loan's original effective interest rate, the estimated fair value of the loan's collateral if the loan is in the process of foreclosure or otherwise collateral dependent, or the loan's observable market price. We also establish valuation allowances for loan losses when, based on past experience, it is probable that a credit event has occurred and the amount of the loss can be reasonably estimated. These valuation allowances are based on loan risk characteristics, historical default rates and loss severities, real estate market fundamentals and outlook as well as other relevant factors. The performance of our commercial mortgage loan investments may fluctuate in the future. In addition, legislative proposals that would allow or require modifications to the terms of commercial mortgage loans could be enacted. We cannot predict whether these proposals will be adopted, or what impact, if any, such laws, if enacted, could have on our business or investments. An increase in the delinquency and default rate of our commercial mortgage loan portfolio could adversely impact our results of operations and financial condition.

Further, any geographic or sector concentration of our commercial mortgage loans may have adverse effects on our investment portfolios and consequently on our results of operations or financial condition. While we generally seek to mitigate the risk of sector concentration by having a broadly diversified portfolio, events or developments that have a negative effect on any particular geographic region or sector may have a greater adverse effect on the investment portfolios to the extent that the portfolios are concentrated, which could affect our results of operations and financial condition.

In addition, liability under environmental protection laws resulting from our commercial mortgage loan portfolio and real estate investments could affect our results of operations or financial condition. Under the laws of several states, contamination of a property may give rise to a lien on the property to secure recovery of the costs of cleanup. In some states, such a lien has priority over the lien of an existing mortgage against the property, which would impair our ability to foreclose on that property should the related loan be in default. In addition, under the laws of some states and under the federal Comprehensive Environmental Response, Compensation and Liability Act of 1980, we may be liable for costs of addressing releases or threatened releases of hazardous substances that require remedy at a property securing a mortgage loan held by us, regardless of whether or not the environmental damage or threat was caused by the obligor, which could harm our results of operations and financial condition. We also may face this liability after foreclosing on a property securing a mortgage loan held by us.

Our operations are complex and a failure to properly perform services could have an adverse effect on our revenues and income.

Our operations include annuity contract administration, portfolio management, shareholder services, contract and sales and servicing, underwriting, distribution, and other services. In order to be competitive, we must properly perform our administrative and related responsibilities, including recordkeeping and accounting, regulatory compliance, security pricing, corporate actions,

compliance with investment restrictions, daily net asset value computations, account reconciliations and required distributions. If we fail to properly perform and monitor our operations, our business could suffer and our revenues and income could be adversely affected.

Our products and services are complex and are frequently sold through intermediaries, and a failure to properly perform services or the misrepresentation of our products or services could have an adverse effect on our revenues, income and financial condition.

Many of our products and services are complex and are frequently sold through intermediaries. In particular, we are reliant on intermediaries to describe and explain our products to potential customers. The intentional or unintentional misrepresentation of our products and services in advertising materials or other external communications, or inappropriate activities by our personnel or an intermediary, could adversely affect our reputation and business prospects, as well as lead to potential regulatory actions or litigation.

The valuation of many of our financial instruments includes methodologies, estimations and assumptions that are subject to differing interpretations and could result in changes to investment valuations that may materially and adversely affect our results of operations and financial condition.

The following financial instruments are carried at fair value in our financial statements: fixed income securities, equity securities, derivatives, embedded derivatives and separate account assets. We have categorized these instruments into a three-level hierarchy, based on the priority of the inputs to the respective valuation technique. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3), while quoted prices in markets that are not active or valuation techniques requiring inputs that are observable for substantially the full term of the asset or liability are Level 2.

Factors considered in estimating fair values of securities, and derivatives and embedded derivatives related to our securities include coupon rate, maturity, principal paydown including prepayments, estimated duration, call provisions, sinking fund requirements, credit rating, industry sector of the issuer and quoted market prices of comparable securities. Factors considered in estimating the fair values of embedded derivatives and derivatives related to product guarantees and index-crediting features (collectively, "guaranteed benefit derivatives") include risk-free interest rates, long-term equity implied volatility, interest rate implied volatility, correlations among mutual funds associated with variable annuity contracts, correlations between interest rates and equity funds and actuarial assumptions such as mortality rates, lapse rates and benefit utilization, as well as the amount and timing of policyholder deposits and partial withdrawals. The impact of our risk of nonperformance is also reflected in the estimated fair value of guaranteed benefit derivatives. In many situations, inputs used to measure the fair value of an asset or liability may fall into different levels of the fair value hierarchy. In these situations, we will determine the level in which the fair value falls based upon the lowest level input that is significant to the determination of the fair value.

The determinations of fair values are made at a specific point in time, based on available market information and judgments about financial instruments, including estimates of the timing and amounts of expected future cash flows and the credit standing of the issuer or counterparty. The use of different methodologies and assumptions may have a material effect on the estimated fair value amounts.

During periods of market disruption, including periods of rapidly changing credit spreads or illiquidity, it has been and will likely continue to be difficult to value certain of our securities, such as certain mortgage-backed securities, if trading becomes less frequent and/or market data becomes less observable.There may be certain asset classes that were in active markets with significant observable data that could become illiquid in a difficult financial environment. In such cases, more securities may fall to Level 3 and thus require more subjectivity and management judgment in determining fair value. As such, valuations may include inputs and assumptions that are less observable or require greater estimation, thereby resulting in values that may differ materially from the value at which the investments may be ultimately sold. Further, rapidly changing and unprecedented credit and equity market conditions could materially impact the valuation of securities as reported within the financial statements, and the period-to-period changes in value could vary significantly. Decreases in value could have a material adverse effect on our results of operations and financial condition.

The determination of the amount of allowances and impairments taken on our investments is subjective and could materially and adversely impact our results of operations or financial condition. Gross unrealized losses may be realized or result in future impairments, resulting in a reduction in our net income (loss).

We evaluate investment securities held by us for impairment on a quarterly basis. This review is subjective and requires a high degree of judgment. For fixed income securities held, an impairment loss is recognized if the fair value of the debt security is less than the carrying value and we no longer have the intent to hold the debt security; if it is more likely than not that we will be required to sell the debt security before recovery of the amortized cost basis; or if a credit loss has occurred.

When we do not intend to sell a security in an unrealized loss position, potential credit related other-than-temporary impairments ("OTTI") are considered using a variety of factors, including the length of time and extent to which the fair value has been less than cost, adverse conditions specifically related to the industry, geographic area in which the issuer conducts business, financial condition of the issuer or underlying collateral of a security, payment structure of the security, changes in credit rating of the security by the rating agencies, volatility of the fair value changes and other events that adversely affect the issuer. In addition, we take into account relevant broad market and economic data in making impairment decisions.

As part of the impairment review process, we utilize a variety of assumptions and estimates to make a judgment on how fixed income securities will perform in the future. It is possible that securities in our fixed income portfolio will perform worse than our expectations. There is an ongoing risk that further declines in fair value may occur and additional OTTI may be recorded in future periods, which could materially and adversely affect our results of operations and financial condition. Furthermore, historical trends may not be indicative of future impairments or allowances.

Fixed income and equity securities classified as available-for-sale are reported at their estimated fair value. Unrealized gains or losses on available-for-sale securities are recognized as a component of other comprehensive income (loss) and are therefore excluded from net income (loss). The accumulated change in estimated fair value of these available-for-sale securities is recognized in net income (loss) when the gain or loss is realized upon the sale of the security or in the event that the decline in estimated fair value is determined to be other-than-temporary and an impairment charge to earnings is taken. Such realized losses or impairments may have a material adverse effect on our net income (loss) in a particular quarterly or annual period.

Our participation in a securities lending program and a repurchase program subjects us to potential liquidity and other risks.

We engage in a securities lending program whereby certain securities, are loaned to other institutions for short periods of time. Initial collateral, primarily cash, is required at 102% of the market value of the loaned securities. The lending agent retains the cash collateral and invests it in liquid assets on our behalf. The market value of the loaned securities is monitored on a daily basis with additional collateral obtained or refunded as the market value of the loan security fluctuates.

We also participate in a repurchase agreement program for our general account whereby we sell fixed income securities to a third-party, primarily major brokerage firms or commercial banks, with a concurrent agreement to repurchase those same securities at a determined future date. During the term of the repurchase agreements, cash or other types of permitted collateral provided to us is sufficient to allow us to fund substantially all of the cost of purchasing replacement assets in the event of counterparty default (i.e., the sold securities are not returned to us on the scheduled repurchase date). Cash proceeds received by us under the repurchase program are typically invested in fixed income securities but may in certain circumstances be available to us for liquidity or other purposes prior to the scheduled repurchase date. The repurchase of securities or our inability to enter into new repurchase agreements would reduce the amount of such cash collateral available to us. Market conditions on or after the repurchase date may limit our ability to enter into new agreements at a time when we need access to additional cash collateral for investment or liquidity purposes.

For both securities lending and repurchase transactions, in some cases, the maturity of the securities held as invested collateral (i.e., securities that we have purchased with cash collateral received) may exceed the term of the related securities on loan and the estimated fair value may fall below the amount of cash received as collateral and invested. If we are required to return significant amounts of cash collateral on short notice and we are forced to sell securities to meet the return obligation, we may have difficulty selling such collateral that is invested in securities in a timely manner, be forced to sell securities in a volatile or illiquid market for less than we otherwise would have been able to realize under normal market conditions, or both. In addition, under adverse capital market and economic conditions, liquidity may broadly deteriorate, which would further restrict our ability to sell securities. If we decrease the amount of our securities lending and repurchase activities over time, the amount of net investment income generated by these activities will also likely decline. See "Item 7. Management's Narrative Analysis of the Results of Operations and Financial Condition-Liquidity and Capital Resources-Securities Lending."

Differences between actual claims experience and reserving assumptions may adversely affect our results of operations or financial condition.

We establish and hold reserves to pay future policy benefits and claims. Our reserves do not represent an exact calculation of liability, but rather are actuarial or statistical estimates based on data and models that include many assumptions and projections,

which are inherently uncertain and involve the exercise of significant judgment, including assumptions as to the levels and/or timing of receipt or payment of premiums, benefits, claims, expenses, interest credits, investment results (including equity market returns), retirement, mortality, morbidity and persistency. We periodically review the adequacy of reserves and the underlying assumptions. We cannot, however, determine with precision the amounts that we will pay for, or the timing of payment of, actual benefits, claims and expenses or whether the assets supporting our policy liabilities, together with future premiums, will grow to the level assumed prior to payment of benefits or claims. If actual experience differs significantly from assumptions or estimates, reserves may not be adequate. If we conclude that our reserves, together with future premiums, are insufficient to cover future policy benefits and claims, we would be required to increase our reserves and incur income statement charges for the period in which we make the determination, which could materially and adversely affect our results of operations and financial condition.

We may face significant losses if mortality rates, morbidity rates, persistency rates or other underwriting assumptions differ significantly from our pricing expectations.

We set prices for many of our annuity products based upon expected claims and payment patterns, using assumptions for mortality rates or likelihood of death and morbidity rates, or likelihood of sickness, of our policyholders. In addition to the potential effect of natural or man-made disasters, significant changes in mortality or morbidity could emerge gradually over time due to changes in the natural environment, the health habits of the insured population, technologies and treatments for disease or disability, the economic environment, or other factors. The long-term profitability of our annuity products depends upon how our actual mortality rates, and to a lesser extent actual morbidity rates, compare to our pricing assumptions. In addition, prolonged or severe adverse mortality or morbidity experience could result in increased reinsurance costs, and ultimately, reinsurers might not offer coverage at all. If we are unable to maintain our current level of reinsurance or purchase new reinsurance protection in amounts that we consider sufficient, we would have to accept an increase in our net risk exposures, revise our pricing to reflect higher reinsurance premiums, or otherwise modify our product offering.

Pricing of our annuity products is also based in part upon expected persistency of these products, which is the probability that a policy will remain in force from one period to the next. Persistency of our annuity products may be significantly and adversely impacted by the increasing value of guaranteed minimum benefits contained in many of our variable annuity products due to poor equity market performance or extended periods of low interest rates as well as other factors. The minimum interest rate guarantees in our fixed annuities may also be more valuable in extended periods of low interest rates. Persistency could be adversely affected generally by developments adversely affecting customer perception of us. Results may also vary based on differences between actual and expected premium deposits and withdrawals for these products. Many of our deferred annuity products also contain optional benefits that may be exercised at certain points within a contract. We set prices for such products using assumptions for the rate of election of deferred annuity living benefits and other optional benefits offered to our contract owners. The profitability of our deferred annuity products may be less than expected, depending upon how actual contract owner decisions to elect or delay the utilization of such benefits compare to our pricing assumptions. The potential development of third-party investor strategies in the annuities business could also adversely affect the profitability of existing business and our pricing assumptions for new business. Actual persistency that is lower than our persistency assumptions could have an adverse effect on profitability, especially in the early years of a policy, primarily because we would be required to accelerate the amortization of expenses we defer in connection with the acquisition of the policy. Actual persistency that is higher than our persistency assumptions could have an adverse effect on profitability in the later years of a block of business because the anticipated claims experience is higher in these later years. If actual persistency is significantly different from that assumed in our current reserving assumptions, our reserves for future policy benefits may prove to be inadequate. Although some of our products permit us to increase premiums or adjust other charges and credits during the life of the policy, the adjustments permitted under the terms of the policies may not be sufficient to maintain profitability. Many of our products, however, do not permit us to increase premiums or adjust charges and credits during the life of the policy or during the initial guarantee term of the policy. Even if permitted under the policy, we may not be able or willing to raise premiums or adjust other charges for regulatory or competitive reasons.

Pricing of our products is also based on long-term assumptions regarding interest rates, investment returns and operating costs. Management establishes target returns for each product based upon these factors, the other underwriting assumptions noted above and the average amount of regulatory and rating agency capital that we must hold to support in-force contracts. We monitor and manage pricing and sales to achieve target returns. Profitability from new business emerges over a period of years, depending on the nature and life of the product, and is subject to variability as actual results may differ from pricing assumptions. Our profitability depends on multiple factors, including the comparison of actual mortality, morbidity and persistency rates and policyholder behavior to our assumptions; the adequacy of investment margins; our management of market and credit risks associated with investments; our ability to maintain premiums and contract charges at a level adequate to cover mortality, benefits and contract administration expenses; the adequacy of contract charges and availability of revenue from providers of investment options offered in variable contracts to cover the cost of product features and other expenses; and management of operating costs and expenses.

We may be required to accelerate the amortization of DAC, deferred sales inducements ("DSI") and/or VOBA, any of which could adversely affect our results of operations or financial condition.

DAC represents policy acquisition costs that have been capitalized. DSI represents benefits paid to contract owners for a specified period that are incremental to the amounts we credit on similar contracts without sales inducements and are higher than the contract's expected ongoing crediting rates for periods after the inducement. VOBA represents outstanding value of in-force business acquired. Capitalized costs associated with DAC, DSI and VOBA are amortized in proportion to actual and estimated gross profits or gross premiums depending on the type of contract. On an ongoing basis, we test the DAC, DSI and VOBA recorded on our balance sheets to determine if these amounts are recoverable under current assumptions. In addition, we regularly review the estimates and assumptions underlying DAC, DSI and VOBA. The projection of estimated gross profits or gross premiums requires the use of certain assumptions, principally related to separate account fund returns in excess of amounts credited to policyholders, policyholder behavior such as surrender, lapse and annuitization rates, interest margin, expense margin, mortality, future impairments and hedging costs. Estimating future gross profits or gross premiums is a complex process requiring considerable judgment and the forecasting of events well into the future. If these assumptions prove to be inaccurate, if an estimation technique used to estimate future gross profits or gross premiums is changed, or if significant or sustained equity market declines occur and/or persist, we could be required to accelerate the amortization of DAC, DSI and VOBA, which would result in a charge to earnings. Such adjustments could have a material adverse effect on our results of operations and financial condition.

Reinsurance subjects us to the credit risk of reinsurers and may not be available, affordable or adequate to protect us against losses.

We cede life insurance policies and annuity contracts or certain risks related to life insurance policies and annuity contracts to other insurance companies using various forms of reinsurance including coinsurance, modified coinsurance, funds withheld, monthly renewable term and yearly renewable term. However, we remain liable to the underlying policyholders, even if the reinsurer defaults on its obligations with respect to the ceded business. If a reinsurer fails to meet its obligations under the reinsurance contract, we will be forced to bear the entire liability for claims on the reinsured policies. In addition, a reinsurer insolvency may cause us to lose our reserve credits on the ceded business, in which case we would be required to establish additional statutory reserves.

In addition, if a reinsurer does not have accredited reinsurer status or if a currently accredited reinsurer loses that status, in any state where we are licensed to do business, we are not entitled to take credit for reinsurance in that state if the reinsurer does not post sufficient qualifying collateral (either qualifying assets in a qualifying trust or qualifying LOCs). In this event, we would be required to establish additional statutory reserves. Similarly, the credit for reinsurance taken by us under reinsurance agreements with affiliated and unaffiliated non-accredited reinsurers is, under certain conditions, dependent upon the non-accredited reinsurer's ability to obtain and provide sufficient qualifying assets in a qualifying trust or qualifying LOCs issued by qualifying lending banks. In order to control expenses associated with LOCs, some of our affiliated reinsurers have established and will continue to pursue alternative sources for qualifying reinsurance collateral. If these steps are unsuccessful, or if unaffiliated non-accredited reinsurers that have reinsured business with us are unsuccessful in obtaining sources of qualifying reinsurance collateral, we might not be able to obtain full statutory reserve credit. Loss of reserve credit would require us to establish additional statutory reserves and would result in a decrease in the level of our capital, which could have a material adverse effect on our profitability, results of operations and financial condition.

Our reinsurance recoverable balances are periodically assessed for uncollectability and there were no significant allowances for uncollectible reinsurance as of December 31, 2015 and December 31, 2014. The collectability of reinsurance recoverables is subject to uncertainty arising from a number of factors, including whether the insured losses meet the qualifying conditions of the reinsurance contract, whether reinsurers or their affiliates have the financial capacity and willingness to make payments under the terms of the reinsurance contract, and the degree to which our reinsurance balances are secured by sufficient qualifying assets in qualifying trusts or qualifying LOCs issued by qualifying lender banks. Although a substantial portion of our reinsurance exposure is secured by assets held in trusts or LOCs, the inability to collect a material recovery from a reinsurer could have a material adverse effect on our profitability, results of operations and financial condition.

The premium rates and other fees that we charge are based, in part, on the assumption that reinsurance will be available at a certain cost. Some of our reinsurance contracts contain provisions that limit the reinsurer's ability to increase rates on in-force business; however, some do not. If a reinsurer raises the rates that it charges on a block of in-force business, in some instances, we will not be able to pass the increased costs onto our customers and our profitability will be negatively impacted. Additionally, such a rate increase could result in our recapturing of the business, which may result in a need to maintain additional reserves, reduce reinsurance receivables and expose us to greater risks. While in prior years, we faced rate increase actions on in-force business, our management of those actions resulted in no material effect on our results of operations or financial condition. However, there can be no assurance

that the outcome of future rate increase actions would similarly result in no material effect. In addition, if reinsurers raise the rates that they charge on new business, we may be forced to raise our premiums, which could have a negative impact on our competitive position.

We reinsure most of our living benefit guarantee riders to SLDI, an affiliated reinsurer, to mitigate the risk produced by such benefits. The reinsurance agreement covers all of the guaranteed minimum income benefits ("GMIB"), as well as the GMWBs with lifetime guarantees. The GMABs and the GMWBs without lifetime guarantees are not covered by this reinsurance.

A decrease in our RBC ratio (as a result of a reduction in statutory surplus and/or increase in RBC requirements) could result in increased scrutiny by insurance regulators and rating agencies and have a material adverse effect on our business, results of operations and financial condition.

The NAIC has established regulations that provide minimum capitalization requirements based on RBC formulas for insurance companies. The RBC formula for life insurance companies establishes capital requirements relating to asset, insurance, interest rate and business risks, including equity, interest rate and expense recovery risks associated with variable annuities and group annuities that contain guaranteed minimum death and living benefits. We are subject to RBC standards and/or other minimum statutory capital and surplus requirements imposed under the laws of Iowa, our state of domicile. (For additional discussion of possible updates to how the NAIC calculates RBC ratios, see “Item 1. Business-Regulation-Insurance Regulation-Financial Regulation-Risk - Based Capital.”)

In any particular year, statutory surplus amounts and RBC ratios may increase or decrease depending on a variety of factors, including the amount of statutory income or losses (which are sensitive to equity market and credit market conditions), the amount of additional capital we must hold to support business growth, changes in equity market levels, the value and credit ratings of certain fixed-income and equity securities in our investment portfolio, the value of certain derivative instruments that do not receive hedge accounting and changes in interest rates, as well as changes to the RBC formulas and the interpretation of the NAIC's instructions with respect to RBC calculation methodologies. Many of these factors are outside of our control. Our financial strength and credit ratings are significantly influenced by statutory surplus amounts and RBC ratios. In addition, rating agencies may implement changes to their own internal models, which differ from the RBC capital model that have the effect of increasing or decreasing the amount of statutory capital we should hold relative to the rating agencies' expectations. In extreme scenarios of equity market declines, sustained periods of low interest rates, rapidly rising interest rates or credit spread widening, the amount of additional statutory reserves that we are required to hold for certain types of GICs and variable annuity guarantees may increase at a greater than linear rate. This increase in reserves would decrease the statutory surplus available for use in calculating the subsidiary's RBC ratios. To the extent that our RBC ratios are deemed to be insufficient, we may seek to take actions either to increase our capitalization or to reduce our capitalization requirements. If we were unable to accomplish such actions, the rating agencies may view this as a reason for a ratings downgrade.

Our failure to meet RBC requirements or minimum capital and surplus requirements could subject us to further examination or corrective action imposed by insurance regulators, including limitations on our ability to write additional business, supervision by regulators or seizure or liquidation. Any corrective action imposed could have a material adverse effect on our business, results of operations and financial condition. A decline in RBC ratios limits our ability to make dividends or distributions to our Parent, could result in a loss of customers or new business, and could be a factor in causing ratings agencies to downgrade our financial strength ratings, each of which could have a material adverse effect on our business, results of operations and financial condition.

A significant portion of our institutional funding originates from a Federal Home Loan Bank, which subjects us to liquidity risks associated with sourcing a large concentration of our funding from one counterparty.

A significant portion of our institutional funding originates from the Federal Home Loan Bank of Des Moines ("FHLB"). We have issued non-putable funding agreements in exchange for eligible collateral in the form of cash, mortgage-backed securities and U.S. Treasury securities. Should the FHLB choose to change its definition of eligible collateral, or if the market value of the pledged collateral decreases in value due to changes in interest rates or credit ratings, we may be required to post additional amounts of collateral in the form of cash or other eligible collateral. Additionally, we may be required to find other sources to replace this funding if we lose access to FHLB funding. This could occur if our creditworthiness falls below either of the FHLB's requirements or if legislative or other political actions cause changes to the FHLBs' mandate or to the eligibility of life insurance companies to be members of the FHLB system.

Any failure to protect the confidentiality of customer information could adversely affect our reputation and have a material adverse effect on our business, financial condition and results of operation.

Our businesses and relationships with customers are dependent upon our ability to maintain the confidentiality of our and our customers' trade secrets, personal information, and other confidential information (including customer transactional data and personal information about our customers, the employees and customers of our customers, and our own employees). We are subject to numerous federal and state laws regarding the privacy and security of personal information, which laws vary significantly from jurisdiction to jurisdiction. Many of our employees and contractors and the representatives of our broker-dealer affiliates have access to and routinely process personal information in computerized, paper and other forms. We rely on various internal policies, procedures and controls to protect the confidentiality of personal information that is accessible to, or in the possession of, us, our employees, contractors and representatives. It is possible that an employee, contractor or representative could, intentionally or unintentionally, disclose or misappropriate personal information or other confidential information. If we fail to maintain adequate internal controls, including any failure to implement newly-required additional controls, or if our employees, contractors or representatives fail to comply with our policies and procedures, misappropriation or intentional or unintentional inappropriate disclosure or misuse of personal information or confidential customer information could occur. Such internal control inadequacies or non-compliance could materially damage our reputation, result in regulatory action or lead to civil or criminal penalties, which, in turn, could have a material adverse effect on our business, reputation, results of operations and financial condition. For additional risks related to our potential failure to protect confidential information, see "-Interruption or other operational failures in telecommunication, information technology, and other operational systems, including as a result of human error, could harm our business," and "-A failure to maintain the security, integrity, confidentiality or privacy of our telecommunication, information technology or other operational systems, or the sensitive data residing on such systems, could harm our business."

Interruption or other operational failures in telecommunication, information technology and other operational systems, including as a result of human error, could harm our business.

We are highly dependent on automated and information technology systems to record and process both our internal transactions and transactions involving our customers, as well as to calculate reserves, value invested assets and complete certain other components of our U.S. GAAP and statutory financial statements. We could experience a failure of one of these systems, our employees or agents could fail to monitor and implement enhancements or other modifications to a system in a timely and effective manner, or our employees or agents could fail to complete all necessary data reconciliation or other conversion controls when implementing a new software system or implementing modifications to an existing system. Despite the implementation of security and back-up measures, our information technology systems may remain vulnerable to disruptions. We may also be subject to disruptions of any of these systems arising from events that are wholly or partially beyond our control (for example, natural disasters, acts of terrorism, epidemics, computer viruses and electrical/telecommunications outages). All of these risks are also applicable where we rely on outside vendors to provide services to us and our customers and third party service providers, including those to whom we outsource certain of our functions. The failure of any one of these systems for any reason, or errors made by our employees or agents, could in each case cause significant interruptions to our operations, which could harm our reputation, adversely affect our internal control over financial reporting, or have a material adverse effect on our business, results of operations and financial condition.

Recently, central banks in Europe and Japan have begun to pursue negative interest rate policies, and the FOMC has not ruled out the possibility that the Federal Reserve would adopt a negative interest rate policy for the United States if circumstances so warranted. Because negative interest rates are largely unprecedented, there is uncertainty as to whether the technology used by financial institutions, including us, could operate correctly in such a scenario. Should negative interest rates emerge, our hardware or software, or the hardware or software used by our contractual counterparties and financial services providers, may not function as expected or at all. In such a case, our financial results and our operations could be adversely affected.

A failure to maintain the security, integrity, confidentiality or privacy of our telecommunication, information technology or other operational systems, or the sensitive data residing on such systems, could harm our business.

We are highly dependent on automated telecommunications, information technology and other operational systems to record and process our internal transactions and transactions involving our customers. Despite the implementation of security and back-up measures, our information technology systems may be vulnerable to physical or electronic intrusions, viruses or other attacks, programming errors, and similar disruptions. Businesses in the United States and in other countries have increasingly become the targets of "cyberattacks", "hacking" or similar illegal or unauthorized intrusions into computer systems and networks. Such events are often highly publicized, result in the theft of significant amounts of information, and cause extensive damage to the reputation of the targeted business, in addition to leading to significant expenses associated with investigation, remediation and customer protection measures. Like others in our industry, we are subject to cyber incidents in the ordinary course of our business. Although

we seek to limit our vulnerability to such events through technological and other means, it is not possible to anticipate or prevent all potential forms of cyberattack or to guarantee our ability to fully defend against all such attacks. In addition, due to the sensitive nature of much of the financial and other personal information we maintain, we may be at particular risk for targeting.

We retain confidential information in our information technology systems, and we rely on industry standard commercial technologies to maintain the security of those systems. Anyone who is able to circumvent our security measures and penetrate our information technology systems could access, view, misappropriate, alter, or delete information in the systems, including personal information and proprietary business information. Information security risks also exist with respect to the use of portable electronic devices, such as laptops, which are particularly vulnerable to loss and theft. The laws of most states require that individuals be notified if a security breach compromises the security or confidentiality of their personal information. Any attack or other breach of the security of our information technology systems that compromises personal information or that otherwise results in unauthorized disclosure or use of personal information could damage our reputation in the marketplace, deter purchases of our products, subject us to heightened regulatory scrutiny, sanctions, significant civil and criminal liability or other adverse legal consequences and require us to incur significant technical, legal and other expenses.

Our third party service providers, including third parties to whom we outsource certain of our functions are also subject to the risks outlined above, any one of which could result in our incurring substantial costs and other negative consequences, including a material adverse effect on our business, results of operations and financial condition.

Changes in accounting standards could adversely impact our reported results of operations and our reported financial condition.

Our financial statements are subject to the application of U.S. GAAP, which is periodically revised or expanded. Accordingly, from time to time we are required to adopt new or revised accounting standards issued by recognized authoritative bodies, including the Financial Accounting Standards Board ("FASB"). It is possible that future accounting standards we are required to adopt could change the current accounting treatment that we apply to our financial statements and that such changes could have a material adverse effect on our results of operations and financial condition.

FASB is working on several projects, which could result in significant changes in U.S. GAAP, including how we account for our life insurance contracts and financial instruments and how our financial statements are presented. The changes to U.S. GAAP could affect the way we account for and report significant areas of our business, could impose special demands on us in the areas of governance, employee training, internal controls and disclosure and will likely affect how we manage our business.

Under the tax sharing agreement, a change in control could affect availability of cash payments.

Effective January 1, 2013, we entered into a federal tax sharing agreement with Voya Financial, Inc. which provides that for 2013 and subsequent years, Voya Financial, Inc. will pay us for the tax benefits of ordinary and capital losses only in the event that the consolidated tax group actually uses the tax benefit of losses generated. Accordingly, in years we incur losses and the associated tax benefits cannot be used by the consolidated tax group we may establish tax valuation allowances, reduce statutory-based admitted assets and may no longer be entitled to receive net cash payments to/(from) Voya Financial, Inc. During the years ended December 31, 2015 and 2014, we have additional net cash payments to/(receipts) from Voya Financial, Inc. under the tax sharing agreement of $(93.9) million and $44.3 million, respectively.

One such instance where the associated tax benefits may not be used by the consolidated tax group could occur if there is a change in control which would trigger the imposition of certain limitations pursuant to Section 382 and Section 383 of the U.S. Internal Revenue Code of 1986, as amended (the "Internal Revenue Code"). These sections operate as anti-abuse rules, the general purpose of which is to prevent trafficking in tax losses and credits, but which can apply without regard to whether a "loss trafficking" transaction occurs or is intended. These rules are triggered when an "ownership change" (generally defined as when the ownership of a company changes by more than 50% (measured by value) on a cumulative basis in any three year period) occurs ("Section 382 event").

During March 2014, ING Group divested a portion of its shareholding in Voya Financial, Inc., our indirect parent company, which caused Voya Financial, Inc. to experience a Section 382 event. Using an estimated Section 382 value of Voya Financial, Inc., our deferred tax asset, tax valuation allowance, admitted deferred tax asset and tax sharing agreement payments did not materially change as a result of the Section 382 event with respect to Voya Financial, Inc.

Although Voya Financial, Inc. entered into an Issue Resolution Agreement in this regard with the IRS in December, 2014, as with such an agreement, the matters addressed may be revisited by the IRS in connection with a tax audit or other examination or inquiry of Voya Financial, Inc.'s tax position. If the IRS were to revisit and successfully challenge the IRC Section 382 calculations of

Voya Financial, Inc., this could impact our ability to obtain tax benefits from existing and future losses and deductions could be adversely affected.

We may be required to establish an additional valuation allowance against the deferred income tax asset if: (i) our business does not generate sufficient taxable income; (ii) there is a significant decline in the fair market value of our investment portfolio; or (iii) our tax planning strategies are modified. Increases in the deferred tax valuation allowance could have a material adverse effect on our results of operations and financial condition.

Deferred income tax represents the tax effect of the differences between the book and tax basis of assets and liabilities. Deferred tax assets represent the tax benefit of future deductible temporary differences, operating loss carryforwards and tax credits carryforward. We periodically evaluate and test our ability to realize our deferred tax assets. Deferred tax assets are reduced by a valuation allowance if, based on the weight of evidence, it is more likely than not that some portion, or all, of the deferred tax assets will not be realized. In assessing the more likely than not criteria, we consider future taxable income as well as prudent tax planning strategies. Future facts, circumstances, tax law changes and FASB developments may result in an increase in the valuation allowance. An increase in the valuation allowance could have a material adverse effect on our results of operations and financial condition.

As of December 31, 2015, we have recognized deferred tax assets based on tax planning related to unrealized gains on investment assets. To the extent these unrealized gains decrease, the tax benefit may be reduced by increasing the tax valuation allowance. For example, if interest rates increase, the amount of the unrealized gains will, most likely, decrease, with all other things constant. The decrease in the deferred tax asset may be recorded as a tax expense in tax on continuing operations based on the intra period tax allocation rules described in ASC Topic 740, "Income Taxes."

Our business may be negatively affected by adverse publicity or increased governmental and regulatory actions with respect to us, other well-known companies or the financial services industry in general.

Governmental scrutiny with respect to matters relating to compensation, compliance with regulatory and tax requirements and other business practices in the financial services industry has increased dramatically in the past several years and has resulted in more aggressive and intense regulatory supervision and the application and enforcement of more stringent standards. The financial crisis of 2008-09 and current political and public sentiment regarding financial institutions has resulted in a significant amount of adverse press coverage, as well as adverse statements or charges by regulators and elected officials. Press coverage and other public statements that assert some form of wrongdoing, regardless of the factual basis for the assertions being made, could result in some type of inquiry or investigation by regulators, legislators and/or law enforcement officials or in lawsuits. Responding to these inquiries, investigations and lawsuits, regardless of the ultimate outcome of the proceeding, is time-consuming and expensive and can divert the time and effort of our senior management from its business. Future legislation or regulation or governmental views on compensation may result in us altering compensation practices in ways that could adversely affect our ability to attract and retain talented employees. Adverse publicity, governmental scrutiny, pending or future investigations by regulators or law enforcement agencies and/or legal proceedings involving us or our affiliates could also have a negative impact on our reputation and on the morale and performance of employees, and on business retention and new sales, which could adversely affect our businesses and results of operations.

Litigation may adversely affect our profitability and financial condition.

We are, and may be in the future, subject to legal actions in the ordinary course of our business operations. Some of these legal proceedings may be brought on behalf of a class. Plaintiffs may seek large or indeterminate amounts of damage, including compensatory, liquidated, treble and/or punitive damages. Our reserves for litigation may prove to be inadequate. It is possible that our results of operations or cash flows in a particular quarterly or annual period could be materially affected by an ultimate unfavorable resolution of pending litigation depending, in part, upon the results of operations or cash flows for such period. Given the large or indeterminate amounts sometimes sought, and the inherent unpredictability of litigation, it is also possible that in certain cases an ultimate unfavorable resolution of one or more pending litigation matters could have a material adverse effect on our financial condition.

A loss of, or significant change in, key product distribution relationships could materially affect sales.

We distribute certain products under agreements with affiliated distributors and other members of the financial services industry that are not affiliated with us. We compete with other financial institutions to attract and retain commercial relationships in each of these channels, and our success in competing for sales through these distribution intermediaries depends upon factors such as the amount of sales commissions and fees we pay, the breadth of our product offerings, the strength of our brand, our perceived

stability and financial strength ratings, and the marketing and services we provide to, and the strength of the relationships we maintain with, individual distributors. An interruption or significant change in certain key relationships could materially affect our ability to market our products and could have a material adverse effect on our business, operating results and financial condition. Distributors may elect to alter, reduce or terminate their distribution relationships with us, including for such reasons as changes in our distribution strategy, adverse developments in our business, adverse rating agency actions or concerns about market-related risks. Alternatively, we may terminate one or more distribution agreements due to, for example, a loss of confidence in, or a change in control of, one of the distributors, which could reduce sales.

We are also at risk that key distribution partners may merge or change their business models in ways that affect how our products are sold, either in response to changing business priorities or as a result of shifts in regulatory supervision or potential changes in state and federal laws and regulations regarding standards of conduct applicable to distributors when providing investment advice to retail and other customers.

The occurrence of natural or man-made disasters may adversely affect our results of operations and financial condition.

We are exposed to various risks arising from natural disasters, including hurricanes, climate change, floods, earthquakes, tornadoes and pandemic disease, as well as man-made disasters and core infrastructure failures, including acts of terrorism, military actions, power grid and telephone/internet infrastructure failures, which may adversely affect AUM, results of operations and financial condition by causing, among other things:

- losses in our investment portfolio due to significant volatility in global financial markets or the failure of counterparties to perform;
- changes in the rate of mortality, claims, withdrawals, lapses and surrenders of existing policies and contracts, as well as sales of new policies and contracts; and
- disruption of our normal business operations due to catastrophic property damage, loss of life, or disruption of public and private infrastructure, including communications and financial services.

There can be no assurance that our business continuation and crisis management plan or insurance coverages would be effective in mitigating any negative effects on operations or profitability in the event of a disaster, nor can we provide assurance that the business continuation and crisis management plans of the independent distributors and outside vendors on whom we rely for certain services and products would be effective in mitigating any negative effects on the provision of such services and products in the event of a disaster.

Claims resulting from a catastrophic event could also materially harm the financial condition of our reinsurers, which would increase the probability of default on reinsurance recoveries. Our ability to write new business could also be adversely affected.

In addition, the jurisdictions in which we are admitted to transact business require life insurers doing business within the jurisdiction to participate in guaranty associations, which raise funds to pay contractual benefits owed pursuant to insurance policies issued by impaired, insolvent or failed insurers. It is possible that a catastrophic event could require extraordinary assessments on us, which may have a material adverse effect on our business, results of operations and financial condition.

The loss of key personnel could negatively affect our financial results and impair our ability to implement our business strategy.

Our success depends in large part on our ability to attract and retain key people. Intense competition exists for key employees with demonstrated ability, and we may be unable to hire or retain such employees. Our key employees include investment professionals, such as portfolio managers, sales and distribution professionals, actuarial and finance professionals and information technology professionals. While we do not believe that the departure of any particular individual would cause a material adverse effect on our operations, the unexpected loss of several of our senior management, portfolio managers or other key employees could have a material adverse effect on our operations due to the loss of their skills, knowledge of our business, and their years of industry experience as well as the potential difficulty of promptly finding qualified replacement employees. We also rely upon the knowledge and experience of employees involved in functions that require technical expertise in order to provide for sound operational controls for our overall enterprise, including the accurate and timely preparation of required regulatory filings and U.S. GAAP and statutory financial statements and operation of internal controls. A loss of such employees could adversely impact our ability to execute key operational functions and could adversely affect our operational controls, including internal controls over financial reporting.

If we experience difficulties arising from outsourcing relationships, our ability to conduct business could be compromised, which may have an adverse effect on our business and results of operations.

As we continue to focus on reducing the expense necessary to support our operations, we have increasingly used outsourcing strategies for certain technology and business functions. If third-party providers experience disruptions or do not perform as anticipated, or we experience problems with a transition, we may experience operational difficulties, an inability to meet obligations, including, but not limited to, policyholder obligations, increased costs and a loss of business that may have a material adverse effect on our business and results of operations. For other risks associated with our outsourcing of certain functions, see "-Interruption or other operational failures in telecommunication, information technology and other operational systems, including as a result of human error, could harm our business," and "-A failure to maintain the security, integrity, confidentiality or privacy of our telecommunication, information technology or other operational systems, or the sensitive data residing on such systems, could harm our business."

We may not be able to protect our intellectual property and may be subject to infringement claims.

We rely on a combination of contracts and copyright, trademark, patent and trade secret laws to protect our intellectual property. Although we endeavor to protect our rights, third parties may infringe upon or misappropriate our intellectual property. We may have to litigate to enforce and protect our copyrights, trademarks, patents and trade secrets or to determine their scope, validity or enforceability. This would represent a diversion of resources that may be significant and our efforts may not prove successful. The inability to secure or protect our intellectual property could have a material adverse effect on our business and our ability to compete.

We may also be subject to claims by third parties for (i) patent, trademark or copyright infringement, (ii) breach of contractual patent, trademark or copyright license rights, or (iii) misappropriation of trade secrets. Any such claims and any resulting litigation could result in significant expense and liability for damages. If we were found to have infringed or misappropriated a third-party patent or other intellectual property right, we could in some circumstances be enjoined from providing certain products or services to our customers or from utilizing and benefiting from certain methods, processes, technology copyrights, trademarks, trade secrets or licenses. Alternatively, we could be required to enter into costly licensing arrangements with third parties or implement a costly work around. Any of these scenarios could have a material adverse effect on our business and results of operations.

Risks Related to Our Closed Block of Variable Annuities

Although we no longer actively market retail variable annuities, our business, results of operations, financial condition and liquidity will continue to be affected by our closed block of variable annuity products for the foreseeable future.

Our closed block of retail variable annuities were sold primarily from 2001 to early 2010 when the block entered run-off. These products offered long-term savings vehicles in which customers (policyholders) made deposits that were invested, largely at the customer's direction, in a variety of U.S. and international equity, fixed income, real estate and other investment options. In addition, these products provided customers with the option to purchase living benefit riders, including GMWBL, GMIB, GMAB and GMWB. All retail variable annuity products include ("GMDB"). In 2009, we decided to cease sales of retail variable annuity products with substantial guarantee features. In early 2010, we ceased all new sales of these products with substantial guarantees, although we continue to accept new deposits in accordance with, and subject to the limitations of, the provisions of existing contracts.

Market movements and actuarial assumption changes (including, with respect to policyholder behavior and mortality) can result in material adverse impacts to our results of operations, financial condition and liquidity. Because policyholders have various contractual rights to defer withdrawals, annuitization and/or maturity of their contracts, the nature and period of contract maturity is subject to policyholder behavior and is therefore indeterminate. Future market movements and changes in actuarial assumptions can result in significant earnings and liquidity impacts, as well as increases in regulatory reserve and capital requirements for this closed block.

Our closed block of variable annuities is subject to market risks.

Our closed block of variable annuities is subject to a number of market risks, primarily associated with U.S. and other global equity market values and interest rates. For example, declining equity market values, increasing equity market volatility, declining interest rates or a prolonged period of low interest rates can result in an increase in the valuation of future policy benefits, reducing our net income. Declining market values for bonds and equities also reduce the account balances of our variable annuity contracts, and since we collect fees and risk charges based on these account balances, our net income may be further reduced.

Declining interest rates, a prolonged period of low interest rates, increased equity market volatility or declining equity market values may also subject us to increased hedging costs. Market events can cause an increase in the amount of statutory reserves that we are required to hold for variable annuity guarantees, lowering our statutory surplus. An increase in interest rates could result in decreased fee income associated with a decline in the value of variable annuity account balances invested in fixed income funds, which also might affect the value of the underlying guarantees within these variable annuities.

The performance of our closed block of variable annuity products depends on assumptions that may not be accurate.

Our in-force closed block of variable annuity products is subject to risks associated with the future behavior of policyholders and future claims payment patterns, using assumptions for mortality experience, lapse rates, GMIB annuitization rates and GMWBL withdrawal rates. We are required to make assumptions about these behaviors and patterns, which may not reflect the actual behaviors and patterns we experience in the future. It is possible that future assumption changes could produce reserve changes that could be material, before considering the impact of reinsurance with SLDI.

In particular, we have only minimal experience regarding the long-term implications of policyholder behavior for our GMIB products and as a result, future experience could lead to significant changes in our assumptions. Our GMIB contracts, most of which were issued during the period from 2004 to 2006, have a ten-year waiting period before annuitization is available. These contracts first become eligible to annuitize during the period from 2014 through 2016, but contain significant incentives to delay annuitization beyond the first eligibility date. In addition, during 2014 and 2015, we made two income enhancement offers to holders of particular series of GMIB contracts, under which policyholders were offered an incentive to annuitize prior to the end of the waiting period, and we have waived the remaining waiting period on these GMIB contracts. As a result, although we have increased experience on policyholder behavior for the first opportunity to annuitize, including from the acceptance rates of the income enhancement offers, we continue to have only a statistically small sample of experience used to set annuitization rates beyond the first eligibility date. Therefore, we anticipate that observable experience data will become statistically credible later in this decade, when a large volume of GMIB benefits begin to reach their maximum benefit over the four-year period from 2019 to 2022.

Similarly, most of our GMWBL contracts are still in the first seven to nine policy years, so our assumptions for withdrawal from contracts with GMWBL benefits may change as experience emerges. In addition, many of our GMWBL contracts contain significant incentives to delay withdrawal. Our experience for GMWBL contracts has recently become more credible, however it is possible that policyholders may choose to withdraw sooner or later than our current best estimate assumes. We expect customer decisions on withdrawal will be influenced by their financial plans and needs as well as by interest rate and market conditions over time and by the availability and features of competing products.

We also make estimates of expected lapse rates, which represent the probability that a policy will not remain in force from one period to the next, for our in-force closed block of variable annuity products. Lapse rates of our variable annuity contracts may be significantly impacted by the value of guaranteed minimum benefits relative to the value of the underlying separate accounts (account value or account balance). In general, policies with guarantees that are “in the money” are assumed to be less likely to lapse. Conversely, “out of the money” guarantees are assumed to be more likely to lapse as the policyholder has less incentive to retain the policy. Lapse rates could also be adversely affected generally by developments that affect customer perception of us.

Our variable annuity lapse rate experience has varied significantly over the period from 2006 to the present, reflecting among other factors, both pre-and post-financial crisis experience. Relative to our current expectations, actual lapse rates have generally demonstrated a declining trend over the period from 2006 to the present. We analyze actual experience over that entire period, as we believe that over the duration of the variable annuity policies we may experience the full range of policyholder behavior and market conditions. However, management’s current best estimate of variable annuity policyholder lapse behavior is weighted more heavily toward more recent experience, as the last three years of data have shown a more consistent trend of lapse behavior.

Actual lapse rates that are lower than our lapse rate assumptions could have an adverse effect on profitability in the later years of a block of business because the anticipated claims experience may be higher than expected in these later years, and, as discussed above, future reserve increases in connection with experience updates could be material and adverse to the results of operations or financial condition of the Company.

We make estimates regarding mortality, which refers to the ceasing of life contingent benefit payments due to the death of the annuitant. Mortality also refers to the incidence of death amongst policyholders triggering the payment of Guaranteed Minimum Death Benefits. We use a combination of actual and industry experience when setting our mortality assumptions.

We review overall policyholder experience at least annually (including lapse, annuitization, withdrawal and mortality), and update these assumptions when deemed necessary based on additional information that becomes available. As customer experience continues to materialize, we may adjust our assumptions. The magnitude of any required changes could be material and adverse to the results of operations or financial condition of the Company if SLDI, the reinsurer of our guaranteed living benefits, fails to meet its obligations under the reinsurance contract.

Our Variable Annuity Hedge Program may not be effective and may be more costly than anticipated.

We periodically re-evaluate our Variable Annuity Hedge Program to respond to changing market conditions and balance the trade-offs among several important factors, including regulatory reserves, rating agency capital, underlying economics, earnings and other factors. While our Variable Annuity Hedge Program is intended to balance numerous critical metrics, we are subject to the risk that our strategies and other management decisions may prove ineffective or that unexpected policyholder experience, alone or in combination with unfavorable market events, may produce losses or unanticipated cash needs beyond the scope of the risk management strategies employed. The Variable Annuity Hedge Program assumes that hedge positions can be rebalanced during a market shock and that the performance of the derivative contracts reasonably matches the performance of the contract owners' variable fund returns. In addition, our Variable Annuity Hedge Program does not hedge certain non-market risks inherent in this segment, including business, credit, insurance and operational risks; any of these risks could cause us to experience unanticipated losses or cash needs. For example, hedging counterparties may fail to perform their obligations resulting in unhedged exposures and losses on positions that are not collateralized. Finally, the cost of the Variable Annuity Hedge Program itself may be greater than anticipated as adverse market conditions can limit the availability and increase the costs of the hedging instruments we employ, and such costs may not be recovered in the pricing of the underlying products being hedged. For example, the cost of hedging guaranteed minimum benefits increases as market volatilities increase and/or interest rates decrease, resulting in a reduction to net income.

Risks Related to Regulation

Our businesses and those of our affiliates are heavily regulated and changes in regulation or the application of regulation may reduce our profitability.

We are subject to detailed insurance, securities and other financial services laws and government regulation. In addition to the insurance, securities and other regulations and laws specific to the industries in which we operate, regulatory agencies have broad administrative power over many aspects of our business, which may include ethical issues, money laundering, privacy, recordkeeping and marketing and sales practices. Also, bank regulators and other supervisory authorities in the United States and elsewhere continue to scrutinize payment processing and other transactions under regulations governing such matters as money-laundering, prohibited transactions with countries subject to sanctions, and bribery or other anti-corruption measures. The financial market dislocations we have experienced have produced, and are expected to continue to produce, extensive changes in existing laws and regulations applicable to our businesses.

Compliance with applicable laws and regulations is time consuming and personnel-intensive, and changes in laws and regulations may materially increase the cost of compliance and other expenses of doing business. There are a number of risks that may arise where applicable regulations may be unclear, subject to multiple interpretations or under development or where regulations may conflict with one another, where regulators revise their previous guidance or courts overturn previous rulings, which could result in our failure to meet applicable standards. Regulators and other authorities have the power to bring administrative or judicial proceedings against us, which could result, among other things, in suspension or revocation of our licenses, cease and desist orders, fines, civil penalties, criminal penalties or other disciplinary action which could materially harm our results of operations and financial condition. If we fail to address, or appear to fail to address, appropriately any of these matters, our reputation could be harmed and we could be subject to additional legal risk, which could increase the size and number of claims and damages asserted against us or subject us to enforcement actions, fines and penalties. See "Item 1. Business - Regulation" for further discussion on the impact of regulations on our businesses.

Our businesses are heavily regulated, and changes in regulation in the United States, enforcement actions and regulatory investigations may reduce profitability.

Our operations are subject to comprehensive regulation and supervision throughout the United States. State insurance laws regulate most aspects of our insurance business and we are regulated by the insurance department of our state of domicile, Iowa. The primary purpose of state regulation is to protect policyholders, and not necessarily to protect creditors and investors. See "Item 1. Business - Regulation-Insurance Regulation".

State insurance guaranty associations have the right to assess insurance companies doing business in their state in order to help pay the obligations of insolvent insurance companies to policyholders and claimants. Because the amount and timing of an assessment is beyond our control, liabilities we have currently established for these potential assessments may not be adequate.

State insurance regulators, the NAIC and other regulatory bodies regularly reexamine existing laws and regulations applicable to insurance companies and their products and their affiliated transactions. Changes in these laws and regulations, or in interpretations thereof, are often made for the benefit of the consumer at the expense of the insurer and could materially and adversely affect our business, results of operations or financial condition. We currently use our affiliated Arizona domiciled captive reinsurance company to reinsure certain of our variable annuities. Uncertainties associated with continued use of our affiliated captive reinsurance company are primarily related to potential regulatory changes. In June 2014, the NAIC adopted a new regulatory framework for captives assuming business governed by Regulators XXX or AXXX, called the "Rector framework". In December 2014, the NAIC adopted Actuarial Guideline 48 (“AG48”) which established a new regulatory requirement applicable to XXX and AG38 reserves ceded to reinsurers, including affiliated reinsurers, as the first step in implementing the Rector framework. As adopted, AG48 limits the type of assets that may be used as collateral to cover the XXX and AG38 statutory reserves and is applied prospectively to existing reinsurance transactions that reinsure policies issued on or after January 1, 2015 and new reinsurance transactions entered into on or after January 1, 2015. The NAIC has charged multiple working groups with the responsibility to prepare regulations that would codify the Rector framework and that work continues at the NAIC. In 2014, the NAIC also considered a proposal to require states to apply NAIC accreditation standards, applicable to traditional insurers, to captive reinsurers. In 2015, the NAIC adopted such a proposal, in the form of a revised preamble to the NAIC accreditation standards (the “Standard”), with an effective date of January 1, 2016 for application of the Standard to captives that assume XXX or AXXX business. Under the Standard, a state will be deemed in compliance as it relates to XXX or AXXX captives if the applicable reinsurance transaction satisfies AG 48. In addition, the Standard applies prospectively, so that XXX or AXXX captives will not be subject to the Standard if reinsured policies were issued prior to January 1, 2015 and ceded so that they were part of a reinsurance arrangement as of December 31, 2014. The NAIC left for future action application of the Standard to captives that assume variable annuity business. As drafted, it appears that the Standard would apply to our affiliate, Security Life of Denver International Limited, an Arizona captive.

During 2015, The NAIC Financial Conditions (E) Committee (the “E Committee”) established the Variable Annuities Issues (E) Working Group (“VAIWG”) to oversee the NAIC’s efforts to study and address, as appropriate, regulatory issues resulting in variable annuity captive reinsurance transactions. The VAIWG retained Oliver Wyman to study the industry’s use of variable annuity captive reinsurance and to develop a set of recommended changes to address the issues involving variable annuity captives. In September 2015, Oliver Wyman issued an initial report, which was adopted by the VAIWG, outlining its preliminary findings and making recommendations for enhancement to the variable annuity statutory framework. In November 2015, upon recommendation of the VAIWG, the E Committee adopted a Variable Annuities Framework for Change (the “VA Framework for Change”) which recommends charges for NAIC working groups to adjust the variable annuity statutory framework applicable to all insurers that have written or are writing variable annuity business. The VA Framework for Change contemplates a holistic set of reforms that would improve the current reserve and capital framework and address root cause issues that result in the use of captive arrangements. Although the VA Framework for Change recommends an effective date of January 1, 2017, the timing of these proposals remains uncertain. In November 2015, the NAIC also approved funding for a quantitative impact study, to be conducted by Oliver Wyman and involving industry participants including us, of various reforms outlined in the VA Framework for Change (the “QIS Study”).

We cannot predict what revisions, if any, would be made to the Rector framework or the Standard for application to captives that assume XXX or AXXX business, as multiple NAIC working groups undertake their implementation, to the VA Framework for Change proposal as a result of the QIS Study and ongoing NAIC deliberations, or to the Standard, if adopted for variable annuity captives. It is also unclear whether these or other proposals will be adopted by the NAIC, or what additional actions and regulatory changes will result from the continued captives scrutiny and reform efforts by the NAIC and other regulatory bodies. Any regulatory action that limits our ability to achieve desired benefits from the use of or materially increases our cost of using captive reinsurance companies, either retroactively or prospectively, including, if adopted as proposed, without grandfathering provisions for existing captive variable annuity reinsurance entities, the Standard, could have a material adverse effect on our financial condition or results of operations.

Insurance regulators have implemented, or begun to implement significant changes in the way in which insurers must determine statutory reserves and capital, particularly for products with contractual guarantees such as variable annuities and universal life policies, and are considering further potentially significant changes in these requirements.

In addition, state insurance regulators are becoming more active in adopting and enforcing suitability standards with respect to sales of fixed and indexed annuities. In particular, the NAIC has adopted a revised SAT, which will, if enacted by the states, place

new responsibilities upon issuing insurance companies with respect to the suitability of annuity sales, including responsibilities for training agents. Several states have already enacted laws based on the SAT.

In addition to the foregoing risks, the financial services industry is the focus of increased regulatory scrutiny as various state and federal governmental agencies and self-regulatory organizations conduct inquiries and investigations into the products and practices of the financial services industries. For a description of certain regulatory inquiries affecting the Company, see the Litigation and Regulatory Matters section of the *Commitments and Contingencies* Note in our Financial Statements in Part II, Item 8. in this Annual Report on Form 10-K. It is possible that future regulatory inquiries or investigations involving the insurance industry generally, or the Company specifically, could materially and adversely affect our business, results of operations or financial condition.

In some cases, this regulatory scrutiny has led to legislation and regulation, or proposed legislation and regulation that could significantly affect the financial services industry, or has resulted in regulatory penalties, settlements and litigation. New laws, regulations and other regulatory actions aimed at the business practices under scrutiny could materially and adversely affect our business, results of operations or financial condition. The adoption of new laws and regulations, enforcement actions, or litigation, whether or not involving us, could influence the manner in which we distribute our products, result in negative coverage of the industry by the media, cause significant harm to our reputation and materially and adversely affect our business, results of operations or financial condition.

Our products are subject to extensive regulation and failure to meet any of the complex product requirements may reduce profitability.

Our annuity, retirement and investment products are subject to a complex and extensive array of state and federal tax, securities, insurance and employee benefit plan laws and regulations, which are administered and enforced by a number of different governmental and self-regulatory authorities, including state insurance regulators, state securities administrators, state banking authorities, the SEC, the Financial Industry Regulatory Authority ("FINRA"), the DOL, and the IRS.

For example, U.S. federal income tax law imposes requirements relating to insurance and annuity product design, administration and investments that are conditions for beneficial tax treatment of such products under the Internal Revenue Code. Additionally, state and federal securities and insurance laws impose requirements relating to insurance and annuity product design, offering and distribution and administration. Failure to administer product features in accordance with contract provisions or applicable law, or to meet any of these complex tax, securities, or insurance requirements could subject us to administrative penalties imposed by a particular governmental or self-regulatory authority, unanticipated costs associated with remedying such failure or other claims, harm to our reputation, interruption of our operations or adversely impact profitability.

The Dodd-Frank Act, its implementing regulations and other financial regulatory reform initiatives could have adverse consequences for the financial services industry, including us and/or materially affect our results of operations, financial condition or liquidity.

On July 21, 2010, the Dodd-Frank Act was signed into law. It effects comprehensive changes to the regulation of financial services in the United States. The Dodd-Frank Act directs existing and newly-created government agencies and bodies to perform studies and promulgate a multitude of regulations implementing the law, a process that is underway and is expected to continue over the next few years. While some studies have already been completed and the rule-making process is well underway, there continues to be significant uncertainty regarding the results of ongoing studies and the ultimate requirements of regulations that have not yet been adopted. We cannot predict with certainty how the Dodd-Frank Act and such regulations will affect the financial markets generally, or impact our business, ratings, results of operations, financial condition or liquidity. The Dodd-Frank Act's potential effects could include:

- If designated by the FSOC as a nonbank financial company subject to supervision by the Federal Reserve, we would become subject to a comprehensive system of prudential regulation, including, among other matters, minimum capital requirements, liquidity standards, credit exposure requirements, overall risk management requirements, management interlock prohibitions, a requirement to maintain a plan for rapid and orderly dissolution in the event of severe financial distress, stress testing, additional fees and assessments and restrictions on proprietary trading and certain investments. The exact scope and consequences of these standards are subject to ongoing rulemaking activity by various federal banking regulators and therefore are currently unclear. However, this comprehensive system of prudential regulation, if applied to us, would significantly impact the manner in which we operate and could materially and adversely impact the profitability of one or more of our business lines or the level of capital required to support our activities. In designating non-bank

financial companies for heightened prudential regulation by the Federal Reserve, the FSOC considers, among other matters, their scope, size and potential impact of their activities on the financial stability of the United States.

- Title VII of the Dodd-Frank Act creates a new framework for regulation of the over-the-counter ("OTC") derivatives markets. New margin and capital requirements on market participants could substantially increase the cost of hedging and related operations, affect the profitability of our products or their attractiveness to our customers, or cause us to alter our hedging strategy or change the composition of the risks we do not hedge.

- The Dodd-Frank Act established the FIO within the Treasury Department. While not having a general supervisory or regulatory authority over the business of insurance, the director of this office performs various functions with respect to insurance, including participating in the FSOC's decisions regarding insurers to be designated for stricter regulation by the Federal Reserve. The Dodd-Frank Act also required the director of FIO to conduct a study on how to modernize and improve the system of insurance regulation in the United States. The director issued that report in December 2013, recommending increased federal involvement in certain areas of insurance regulation to improve uniformity, and setting out recommendations in areas of near-term reform for the states, including prudential and marketplace oversight. The report also recommended that states develop a uniform and transparent solvency oversight regime for the transfer of risk to reinsurance captives, and adopt a uniform capital requirement for reinsurance captives, including a prohibition on transactions that do not constitute legitimate risk transfer. FIO has an ongoing charge to monitor all aspects of the insurance industry and will monitor state regulatory developments, including those called for in its report and present options for federal involvement if deemed necessary.

The Dodd-Frank Act also includes various securities law reforms that may affect our business practices. See “Changes in U.S. federal and state securities laws and regulations may affect our operations and our profitability” below.

Although the full impact of the Dodd-Frank Act cannot be determined until the various studies mandated by the law are conducted and implementing regulations are adopted, many of the legislation's requirements could have profound and/or adverse consequences for the financial services industry, including for us. The Dodd-Frank Act could make it more expensive for us to conduct business, require us to make changes to our business model or satisfy increased capital requirements, subject us to greater regulatory scrutiny or to potential increases in whistleblower claims in light of the increased awards available to whistleblowers under the Act and have a material adverse effect on our results of operations or financial condition.

See "Item 1. Business - Regulation" for further discussion of the impact of the Dodd-Frank Act on our businesses.

Changes in U.S. federal and state securities laws and regulations may affect our operations and our profitability.

U.S. federal and state securities laws apply to sales of our variable annuity products (which are considered to be both insurance products and securities). In addition, certain fixed and indexed annuities we may offer may be registered as securities under the Securities Act. As a result, these products are subject to regulation by the SEC and FINRA. Our variable annuity products are issued through separate accounts and the separate accounts are registered as investment companies under the Investment Company Act. Distribution of our annuity products registered as securities is affected by laws and regulations applicable to broker-dealers.

Securities laws and regulations are primarily intended to ensure the integrity of the financial markets and to protect investors in the securities markets or investment advisory or brokerage clients. These laws and regulations generally grant supervisory agencies broad administrative powers, including the power to limit or restrict the conduct of business for failure to comply with those laws and regulations. A number of changes have recently been proposed to the laws and regulations that govern the conduct of our registered insurance products business and our distributors that could have a material adverse effect on our results of operations and financial condition. For example, the Dodd-Frank Act authorizes the SEC to establish a standard of conduct applicable to brokers and dealers when providing personalized investment advice to retail customers. This standard of conduct would be to act in the best interest of the customer without regard to the financial or other interest of the broker or dealer providing the advice. The SEC has not yet decided whether to propose rules creating a uniform standard of conduct applicable to broker-dealers and investment advisers. Further, proposals have been made that the SEC establish a self-regulatory organization with respect to registered investment advisers, which could increase the level of regulatory oversight over them. Changes to these laws or regulations that restrict the conduct of our business could have an adverse effect on our results of operations and financial condition.

Changes to federal regulations could adversely affect our distribution model by restricting our ability to provide customers with advice.

The prohibited transaction rules of the Internal Revenue Code generally restrict providing investment advice to purchasers of individual retirement accounts and individual retirement annuities if the investment recommendation results in fees paid to the individual advisor, his or her firm or their affiliates that vary according to the investment recommendation chosen. In March 2010, the DOL issued proposed regulations that provide limited relief from these investment advice restrictions. The DOL issued final rules in October of 2011 and did not provide additional relief regarding these restrictions. As a result, the ability of certain of our investment advisory affiliates and their advisory representatives to provide investment advice with respect to individual retirement accounts and individual retirement annuities, will likely be significantly restricted. Also, the fee and revenue arrangements of certain advisory programs may be required to be revenue neutral, resulting in potential lost revenues for these investment advisers and their affiliates.

Other proposed regulatory initiatives applicable to individual retirement accounts and individual retirement annuities may negatively impact the distribution of our products. In particular, in April 2015 the DOL issued a proposed rule that would, if adopted as proposed, broaden the definition of "fiduciary" for purposes of ERISA and the Internal Revenue Code, as it applies to a person or entity providing investment advice with respect to ERISA plans or individual retirement accounts and individual retirement annuities. As proposed, the rule would expand the circumstances in which providers of investment advice to small plan sponsors, plan participants and beneficiaries, and IRA investors are deemed to act in a fiduciary capacity. The rule would require such providers to act in their clients' "best interests", not influenced by any conflicts of interest, including due to the direct or indirect receipt of compensation. Although the DOL concurrently proposed a "best interest contract exemption" intended to enable continuation of certain existing industry practices relating to receipt of commissions and other compensation, the exemption includes conditions and requirements that may make it difficult to rely upon in practice.

Although the final outcome of the DOL rulemaking remains uncertain, the proposed rule, if adopted in its current form, could lead to changes in how distributors of annuity products are compensated and could adversely affect sales of annuities to IRAs and other tax-qualified investors. In addition, the proposed rule may make it easier for the DOL in enforcement actions, and for plaintiffs' attorneys in ERISA litigation, to attempt to extend fiduciary status to, or to claim fiduciary or contractual breach by, advisors who would not be deemed fiduciaries under current regulations. Compliance with the proposed rule could also increase our overall operational costs for providing some of the services we currently provide.

Changes in tax laws and interpretations of existing tax law could increase our tax costs, impact our ability to make distributions to Voya Financial, Inc. or make our insurance, annuity and investment products less attractive to customers.

Changes in tax laws could increase our taxes and our effective tax rates. For example, as in prior years the Obama Administration recently re-proposed modifying the dividends received deduction for life insurance company separate accounts, and such a modification could significantly reduce or eliminate the dividends received deduction that we are able to claim for dividends received in separate accounts. As such, the dividend received deduction is a significant component of the difference between our actual tax expense and the expected tax expense determined using the federal statutory income tax rate of 35%. Also, interpretation and enforcement of existing tax law could change and could be applied to us as part of an IRS examination and increase our tax costs. In the course of such examinations, we have also entered into agreements with the IRS to resolve issues related to the application of the section 382 limitation and tax accounting matters such as: i) whether certain derivative transactions qualify for hedge treatment, ii) the proper treatment of valid tax hedge gains and losses and iii) "other than temporary impairment" losses. These agreements may be superseded by future enacted laws, regulations or public guidance that increases our taxes and our effective tax rates. Further, changes in tax rates could affect the amount of our deferred tax assets and deferred tax liabilities. One such change relates to the current debate over corporate tax reform and corporate tax rates. A reduction in the top federal tax rate would result in lower statutory deferred tax assets. Such a reduction in the statutory deferred tax asset may impact our ability to make distributions to Voya Financial, Inc.

Changes in tax laws could make some of our insurance, annuity and investment products less attractive to customers. Current U.S. federal income tax law permits tax-deferred accumulation of income earned under life insurance and annuity products, and permits exclusion from taxation of death benefits paid under life insurance contracts. Changes in tax laws that restrict these tax benefits could make some of our products less attractive to customers. Reductions in individual income tax rates or estate tax rates could also make some of our products less advantageous to customers. Changes in federal tax laws that reduce the amount an individual can contribute on a pre-tax basis to an employer-provided, tax-deferred product (either directly by reducing current limits or indirectly by changing the tax treatment of such contributions from exclusions to deductions) or changes that would limit an individual's aggregate amount of tax-deferred savings could make our retirement products less attractive to consumers.

Congress has signaled interest in possibly pursuing limited international tax reform. If successful, it is unlikely to result in reducing corporate tax rates by broadening the taxable income base. Also viewed as unlikely is a reduction of tax preferences, including possibly the reduction or elimination of tax preferences associated with our industry. States that stand to lose tax revenue of their own will exert pressure on the federal government not to enact additional measures as part of comprehensive tax reform that would negatively impact them. Such a situation may result in more pressure on raising revenue from tax preferences associated with our Company and products.

Item 1B. Unresolved Staff Comments

Omitted as registrant is neither an accelerated filer nor a well-known seasoned issuer.

Item 2. Properties

Our principal office is located at 1475 Dunwoody Drive, West Chester, Pennsylvania, 19380-1478. Our annuity operations and customer service center are located at 909 Locust Street, Des Moines, Iowa 50309, and the GIC business activities are located at 5780 Powers Ferry Road, N.W., Atlanta, Georgia 30327-4390. Our office space is leased or subleased by us or our other affiliates except for our location at 5780 Powers Ferry Road, N.W., Atlanta, Georgia.

Item 3. Legal Proceedings

See the Litigation and Regulatory Matters section of the *Commitments and Contingencies* Note in our Financial Statements in Part II, Item 8. in this Annual Report on Form 10-K for a description of our material legal proceedings.

Item 4. Mine Safety Disclosures

Not applicable.

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities
(Dollar amounts in millions, unless otherwise stated)

There is no public trading market for the common stock of VIAC. All of our outstanding common stock is owned by our parent, Voya Holdings Inc. ("Parent"), a direct, wholly owned subsidiary of Voya Financial, Inc.

Iowa insurance law imposes restrictions on an Iowa insurance company's ability to pay dividends to its parent. These restrictions are based in part on the prior year's statutory income and surplus. In general, dividends up to specified levels are considered ordinary and may be paid without prior approval. Dividends in larger amounts, or extraordinary dividends, are subject to approval by the Iowa Insurance Commission.

Under Iowa law, an extraordinary dividend or distribution is defined as a dividend or distribution that, together with other dividends or distributions made within the preceding twelve months, exceeds the greater of (1) ten percent (10.0%) of our earned statutory surplus at the prior year end or (2) our prior year statutory net gain from operations. Iowa law also prohibits an Iowa insurer from declaring or paying a dividend except out of its earned surplus unless prior insurance regulatory approval is obtained.

During the year ended December 31, 2015, we declared an ordinary dividend to our Parent in the amount of $394.0 million, which was paid to our Parent on May 20, 2015. During the year ended December 31, 2014, we paid an ordinary dividend of $216.0 million to our Parent.

During the year ended December 31, 2015, we declared an extraordinary distribution in the amount of $98.0 million, subject to receipt of approval by the Iowa Insurance Division. The Iowa Insurance Division provided its approval on June 25, 2015, and we paid the extraordinary distribution to our Parent on June 26, 2015.

During the years ended December 31, 2015, and 2014, we did not receive any capital contributions from our Parent.

Item 6. Selected Financial Data

Omitted pursuant to General Instruction I(2)(a) of Form 10-K.

Item 7. Management's Narrative Analysis of the Results of Operations and Financial Condition
(Dollar amounts in millions, unless otherwise stated)

For the purposes of the discussion in this Annual Report on Form 10-K, the terms "Company," "we," "our," "us" and "VIAC" refer to Voya Insurance and Annuity Company. We are a direct, wholly owned subsidiary of Voya Holdings Inc. ("Parent"), which is a direct, wholly owned subsidiary of Voya Financial, Inc.

The following discussion and analysis presents a review of our results of operations for the years ended December 31, 2015, 2014 and 2013 and financial condition as of December 31, 2015 and 2014. This item should be read in its entirety and in conjunction with the Financial Statements and related notes contained in Part II, Item 8. of this Annual Report on Form 10-K.

In addition to historical data, this discussion contains forward-looking statements about our business, operations and financial performance based on current expectations that involve risks, uncertainties and assumptions. Actual results may differ materially from those discussed in the forward-looking statements as a result of various factors. See "Note Concerning Forward-Looking Statements."

Basis of Presentation

VIAC is a stock life insurance company domiciled in the State of Iowa and provides financial products and services in the United States. VIAC is authorized to conduct its insurance business in all states, except New York, and in the District of Columbia.

Products currently offered by us include fixed and indexed annuities, and payout annuities, designed to address customer needs for tax-advantaged savings, retirement needs and wealth-protection concerns. We also offer guaranteed investment contracts and funding agreements (collectively referred to as "GICs"). We stopped actively writing new retail annuity products with substantial guarantee features in early 2010.

We have one operating segment.

Critical Accounting Judgments and Estimates

General

The preparation of financial statements in conformity with accounting principles generally accepted in the United States ("U.S. GAAP") requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the Financial Statements and the reported amounts of revenues and expenses during the reporting period. Critical estimates and assumptions are evaluated on an on-going basis based on historical developments, market conditions, industry trends and other information that is reasonable under the circumstances. There can be no assurance that actual results will conform to estimates and assumptions and that reported results of operations will not be materially affected by the need to make future accounting adjustments to reflect changes in these estimates and assumptions from time to time.

We have identified the following accounting judgments and estimates as critical in that they involve a higher degree of judgment and are subject to a significant degree of variability:

- Reserves for future policy benefits;
- Deferred policy acquisition costs ("DAC"), value of business acquired ("VOBA") and deferred sales inducements ("DSI");
- Valuation of investments and derivatives;
- Impairments;
- Income taxes; and
- Contingencies.

In developing these accounting estimates, we make subjective and complex judgments that are inherently uncertain and subject to material changes as facts and circumstances develop. Although variability is inherent in these estimates, we believe the amounts provided are appropriate based on the facts available upon preparation of the Financial Statements.

The above critical accounting estimates are described in the *Business, Basis of Presentation and Significant Accounting Policies* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K.

Reserves for Future Policy Benefits

The determination of future policy benefit reserves is dependent on actuarial assumptions. The principal assumptions used to establish liabilities for future policy benefits are based on our experience and periodically reviewed against industry standards. These assumptions include mortality, morbidity, policy lapse, contract renewal, payment of subsequent premiums or deposits by the contract owner, retirement, investment returns, inflation, benefit utilization and expenses. The assumptions used require considerable judgments. Changes in, or deviations from, the assumptions used can significantly affect our reserve levels and related results of operations.

- Mortality is the incidence of death among policyholders triggering the payment of underlying insurance coverage by the insurer. In addition, mortality also refers to the ceasing of payments on life-contingent annuities due to the death of the annuitant. We utilize a combination of actual and industry experience when setting our mortality assumptions.
- A lapse rate is the percentage of in-force policies surrendered by the policyholder or canceled by us due to non-payment of premiums. For certain of our variable products, the lapse rate assumption varies according to the current account value relative to guarantees associated with the product and applicable surrender charges. In general, policies with guarantees that are considered "in the money" (i.e., where the notional benefit amount is in excess of the account value) are assumed to be less likely to lapse or surrender. Conversely, "out of the money" guarantees may be assumed to be more likely to lapse or surrender as the policyholder has less incentive to retain the policy.

See the *Guaranteed Benefit Features* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information on our reserves for future policy benefits, contract owner account balances and product guarantees.

Insurance and Other Reserves

Reserves for traditional life insurance contracts (term insurance, participating and non-participating whole life insurance and traditional group life insurance) and accident and health insurance represent the present value of future benefits to be paid to or on behalf of contract owners and related expenses, less the present value of future net premiums. Assumptions as to interest rates, mortality, expenses and persistency are based on our estimates of anticipated experience at the period the policy is sold or acquired, including a provision for adverse deviation. Interest rates used to calculate the present value of these reserves ranged from 2.3% to 7.2%.

Reserves for payout contracts with life contingencies are equal to the present value of expected future payments. Assumptions as to interest rates, mortality and expenses are based on our estimates of experience at the period the policy is sold or acquired, including a provision for adverse deviation. Such assumptions generally vary by annuity plan type, year of issue and policy duration. Interest rates used to calculate the present value of future benefits ranged from 1.0% to 7.5%.

Although assumptions are "locked-in" upon the issuance of traditional life insurance contracts, certain accident and health insurance contracts and payout contracts with life contingencies, significant changes in experience or assumptions may require us to provide for expected future losses on a product by establishing premium deficiency reserves. Premium deficiency reserves are determined based on best estimate assumptions that exist at the time the premium deficiency reserve is established and do not include a provision for adverse deviation. During the year ended December 31, 2015, we established premium deficiency reserves of $126.0 million before tax related to certain payout annuity contracts, which was recorded as an increase in Policyholder benefits and contract owner balances with a corresponding increase in Deposits and reinsurance recoverable, as the reserves are ceded to an affiliate on a 100% coinsurance and coinsurance funds withheld basis. The establishment of this premium deficiency reserve had no impact in the Statements of Operations for the year ended December 31, 2015.

Product Guarantees and Index-crediting Features

The assumptions used to establish the liabilities for our product guarantees require considerable judgment and are established as management's best estimate of future outcomes. We periodically review these assumptions and, if necessary, update them based on additional information that becomes available. Changes in, or deviations from, the assumptions used can significantly affect our reserve levels and related results of operations.

GMDB and GMIB: Reserves for annuity guaranteed minimum death benefits ("GMDB") and guaranteed minimum income benefits ("GMIB") are determined by estimating the value of expected benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments. Expected experience is based on a range of scenarios. Assumptions used, such as the long-term equity market return, lapse rate and mortality, are consistent with assumptions used in estimating gross profits for the purpose of amortizing DAC. In addition, the reserve for the GMIB incorporates assumptions

for the likelihood and timing of the potential annuitizations that may be elected by the contract owner. In general, we assume that GMIB annuitization rates will be higher for policies with more valuable ("in the money") guarantees.

GMAB, GMWB, GMWBL and FIA: We also issue certain products which contain embedded derivatives that are measured at estimated fair value separately from the host contract. These embedded derivatives include annuity guaranteed minimum accumulation benefits ("GMAB"), guaranteed minimum withdrawal benefits without life contingencies ("GMWB"), guaranteed minimum withdrawal benefits with life payouts ("GMWBL") and fixed indexed annuities ("FIAs").

At inception of the GMAB, GMWB and GMWBL contracts, we project a fee to be attributed to the embedded derivative portion of the guarantee equal to the present value of projected future guaranteed benefits. After inception, the estimated fair value of the GMAB, GMWB and GMWBL contracts is determined based on the present value of projected future guaranteed benefits, minus the present value of projected attributed fees. A risk neutral valuation methodology is used under which the cash flows from the guarantees are projected under multiple capital market scenarios using observable risk free rates. The projection of future guaranteed benefits and future attributed fees require the use of assumptions for capital markets (e.g., implied volatilities, correlation among indices, risk-free swap curve, etc.) and policyholder behavior (e.g., lapse, benefit utilization, mortality, etc.).

The estimated fair value of the embedded derivative in the FIA contracts is based on the present value of the excess of interest payments to the contract owners over the growth in the minimum guaranteed contract value. The excess interest payments are determined as the excess of projected index driven benefits over the projected guaranteed benefits. The projection horizon is over the anticipated life of the related contracts, which takes into account best estimate actuarial assumptions, such as partial withdrawals, full surrenders, deaths, annuitizations and maturities.

Certain FIA contracts contain guaranteed withdrawal benefit provisions. Reserves for these benefits are calculated by estimating the value of expected benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments.

The liabilities for the GMAB, GMWB, GMWBL and FIA embedded derivatives include a risk margin to capture uncertainties related to policyholder behavior assumptions. The margin represents additional compensation a market participant would require to assume these risks.

The discount rate used to determine the fair value of the liabilities for our GMAB, GMWB, GMWBL and FIA embedded derivatives includes an adjustment to reflect the risk that these obligations will not be fulfilled (“nonperformance risk”). Our nonperformance risk adjustment is based on a blend of observable, similarly rated peer holding company credit default swap ("CDS") spreads, adjusted to reflect the credit quality of VIAC, the issuer of the guarantee, as well as an adjustment to reflect the priority of policyholder claims.The impact of the nonperformance risk adjustment on the fair value of these liabilities was a reduction of approximately $791.0 million and $754.0 million as of December 31, 2015 and 2014, respectively, with the change primarily due to the increases in observable credit spreads and an increase in the associated reserves.

Assumptions and Periodic Review

We review overall policyholder experience at least annually (including lapse, annuitization, withdrawal and mortality) and update these assumptions when deemed necessary, based on additional information that becomes available. If policyholder experience is significantly different from that assumed, this could have a significant effect on our reserve levels and related results of operations.

See the *Quantitative and Qualitative Disclosures About Market Risk* Section in Part II, Item 7A. of this Annual Report on Form 10-K for additional information regarding the specific hedging strategies and reinsurance we utilize to mitigate risk for the product guarantees, as well as sensitivities of the embedded derivative liabilities to changes in certain capital markets assumptions.

Deferred Policy Acquisition Costs, Value of Business Acquired and Deferred Sales Inducements

DAC represents policy acquisition costs that have been capitalized and are subject to amortization and interest. VOBA represents the outstanding value of in-force business acquired and is subject to amortization and interest. DSI represents benefits paid to contract owners for a specified period that are incremental to the amounts we credit on similar contracts without sales inducements and are higher than the contract's expected ongoing crediting rates for periods after the inducement.

See the *Deferred Policy Acquisition Costs and Value of Business Acquired* Note and the *Sales Inducements* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for additional information on DAC, VOBA and sales inducements.

Amortization Methodologies

We amortize DAC and VOBA related to universal life ("UL") and variable universal life ("VUL") contracts and fixed and variable deferred annuity contracts over the estimated lives of the contracts in relation to the emergence of estimated gross profits. Assumptions as to mortality, persistency, interest crediting rates, fee income, returns associated with separate account performance, impact of hedge performance, expenses to administer the business and certain economic variables, such as inflation, are based on our experience and overall capital markets. At each valuation date, estimated gross profits are updated with actual gross profits, and the assumptions underlying future estimated gross profits are evaluated for continued reasonableness. Adjustments to estimated gross profits require that amortization rates be revised retroactively to the date of the contract issuance ("unlocking"). If the update of assumptions causes estimated gross profits to increase, DAC and VOBA amortization will decrease, resulting in a current period increase to earnings. The opposite result occurs when the assumption update causes estimated gross profits to decrease. We amortize DSI over the estimated lives of the related contracts using the same methodology and assumptions used to amortize DAC.

Recoverability testing is performed for current issue year products to determine if gross profits are sufficient to cover DAC, VOBA and DSI, estimated benefits and related expenses. In subsequent periods, we perform testing to assess the recoverability of DAC, VOBA and DSI on an annual basis, or more frequently if circumstances indicate a potential loss recognition issue exists. If DAC, VOBA or DSI are not deemed recoverable from future gross profits, charges will be applied against the DAC, VOBA or DSI balances before an additional reserve is established.

During the year ended December 31, 2015, our reviews resulted in loss recognition of $342.0 million before income taxes, of which $276.9 million and $65.1 million was recorded to Net amortization of DAC and VOBA and Interest credited and other benefits to contract owners, respectively, in the Statements of Operations, with a corresponding decrease on the Balance Sheets to Deferred policy acquisition costs, Value of business acquired, and Sales inducements to contract owners.

In assessing loss recognition related to DAC, VOBA and DSI, we must select an approach for aggregating different blocks of business in the loss recognition calculation. In the first quarter of 2013, we updated the aggregation approach used in assessment of such loss recognition. This change in estimate was due to certain organizational changes that commenced in the first quarter of 2013, which resulted in changes to how we manage the variable annuity business that is no longer actively marketed. As a result of this estimate change, we recognized loss recognition of $350.8 million before taxes during the first quarter of 2013. This amount was recorded in the Statements of Operations of $306.0 million to Net amortization of deferred policy acquisition costs and value of business acquired and $44.8 million to Interest credited and other benefits to contract owners/policyholders, with a corresponding decrease in the Balance Sheets to Deferred policy acquisition costs, Value of business acquired and Sales inducements to contract owners.

Assumptions and Periodic Review

Changes in assumptions can have a significant impact on DAC, VOBA, and DSI, amortization rates, reserve levels, and results of operations. Assumptions are management's best estimate of future outcome. We periodically review these assumptions against actual experience and, based on additional information that becomes available, update our assumptions. Deviation of emerging experience from our assumptions could have a significant effect on our DAC, VOBA and DSI, reserves, and the related results of operations.

- One significant assumption is the assumed return associated with the variable account performance, which has historically had a greater impact on variable annuity than VUL products. To reflect the volatility in the equity markets, this assumption involves a combination of near-term expectations and long-term assumptions regarding market performance. The overall return on the variable account is dependent on multiple factors, including the relative mix of the underlying sub-accounts among bond funds and equity funds, as well as equity sector weightings. Our practice assumes that near-term and long-term increases or decreases in equity markets revert to the long-term appreciation in equity markets ("reversion to the mean"). We monitor market events and only change the assumption when sustained deviations are expected. This methodology incorporates a 9% long-term equity return assumption, a 14% cap and a five-year look-forward period.
- Another significant assumption used in the estimation of gross profits for certain products is mortality. We utilize a combination of actual and industry experience when setting our mortality assumptions, which are consistent with the assumptions used to calculate reserves for future policy benefits.
- Assumptions related to interest rate spreads and credit losses also impact estimated gross profits for all applicable products with credited rates. These assumptions are based on the current investment portfolio yields and credit quality, estimated future crediting rates, capital markets, and estimates of future interest rates and defaults.
- Other significant assumptions include estimated policyholder behavior assumptions, such as surrender, lapse, and annuitization rates. We use a combination of actual and industry experience when setting and updating our policyholder

behavior assumptions, and such assumptions require considerable judgment. Estimated gross profits for our variable annuity contracts are particularly sensitive to these assumptions.

We include the impact of the change in value of the embedded derivatives associated with the GMAB, GMWB, GMWBL and FIA contracts in gross profits for purposes of determining DAC amortization.

During the third quarter of 2015, 2014 and 2013, we conducted our annual review of assumptions, including projection model inputs. As a result of these reviews, we made a number of changes, which resulted in favorable (unfavorable) impacts on Income (loss) before income taxes of $(34.3) million, $231.7 million, and $(37.5) million in 2015, 2014, and 2013, respectively, of which $(83.0) million, $108.4 million, and $21.0 million, respectively, was related to DAC, VOBA and DSI unlocking.

Sensitivity

We perform sensitivity analyses to assess the impact that certain assumptions have on DAC, VOBA and DSI, as well as certain reserves. The following table presents the estimated instantaneous net impact to income before income taxes of various assumption changes on our DAC, VOBA and DSI balances and the impact on related reserves for future policy benefits and reinsurance. The effects presented are not representative of the aggregate impacts that could result if a combination of such changes to equity markets, interest rates and other assumptions occurred. (Assumptions regarding shifts in market factors may be overly simplistic and not indicative of actual market behavior in stress scenarios.)

($ in millions)	**As of December 31, 2015**	
Decrease in long-term rate of return assumption by 100 basis points	$	(9.5)
A change to the long-term interest rate assumption of -50 basis points		(4.9)
A change to the long-term interest rate assumption of +50 basis points		(125.9)
An assumed increase in future mortality by 1%		(5.1)
A one-time, 10% decrease in equity market values[1]		40.7

[1]Excludes impact of derivative results ceded to Security Life of Denver International Limited ("SLDI") under the combined coinsurance and coinsurance funds withheld agreement as amended.

Valuation of Investments and Derivatives

Our investment portfolio consists of public and private fixed maturity securities, commercial mortgage and other loans, equity securities, short-term investments, other invested assets and derivative financial instruments. Fixed maturity and equity securities are primarily classified as available-for-sale and are carried at fair value. We enter into interest rate, equity market, credit default and currency contracts, including swaps, futures, forwards, caps, floors and options, to reduce and manage various risks associated with changes in value, yield, price, cash flow or exchange rates of assets or liabilities held or intended to be held, or to assume or reduce credit exposure associated with a referenced asset, index or pool. We also utilize options and futures on equity indices to reduce and manage risks associated with our annuity products.

See the *Investments* Note and the *Derivative Financial Instruments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information.

Investments

We measure the fair value of our financial assets and liabilities based on assumptions used by market participants in pricing the asset or liability, which may include inherent risk, restrictions on the sale or use of an asset, or nonperformance risk, including our own credit risk. The estimate of fair value is the price that would be received to sell an asset or transfer a liability ("exit price") in an orderly transaction between market participants in the principal market, or the most advantageous market in the absence of a principal market, for that asset or liability. We use a number of valuation sources to determine the fair values of our financial assets and liabilities, including quoted market prices, third-party commercial pricing services, third-party brokers, industry-standard, vendor-provided software that models the value based on market observable inputs, and other internal modeling techniques based on projected cash flows.

We categorize our financial instruments into a three-level hierarchy based on the priority of the inputs to the valuation technique. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure fair value fall within different levels of the

hierarchy, the category level is based on the lowest priority level input that is significant to the fair value measurement of the instrument.

When available, the estimated fair value of securities is based on quoted prices in active markets that are readily and regularly obtainable. When quoted prices in active markets are not available, the determination of estimated fair value is based on market standard valuation methodologies, including discounted cash flows, matrix pricing or other similar techniques. Inputs to these methodologies include, but are not limited to, market observable inputs such as benchmark yields, credit quality, issuer spreads, bids, offers and cash flow characteristics of the security. For privately placed bonds, we also consider such factors as the net worth of the borrower, value of the collateral, the capital structure of the borrower, the presence of guarantees, and the borrower's ability to compete in its relevant market. Valuations are reviewed and validated monthly by an internal valuation committee using price variance reports, comparisons to internal pricing models, back testing of recent trades, and monitoring of trading volumes, as appropriate.

The valuation of financial assets and liabilities involves considerable judgment, is subject to considerable variability, is established using management's best estimate, and is revised as additional information becomes available. As such, changes in, or deviations from, the assumptions used in such valuations can significantly affect our results of operations. Financial markets are subject to significant movements in valuation and liquidity, which can impact our ability to liquidate and the selling price that can be realized for our securities.

Derivatives

Derivatives are carried at fair value, which is determined by using observable key financial data, such as yield curves, exchange rates, Standard & Poor's 500 Index ("S&P 500") prices, London Interbank Offered Rates ("LIBOR") and Overnight Index Swap Rates ("OIS") or through values established by third-party sources, such as brokers. Valuations for our futures contracts are based on unadjusted quoted prices from an active exchange. Counterparty credit risk is considered and incorporated in our valuation process through counterparty credit rating requirements and monitoring of overall exposure. Our own credit risk is also considered and incorporated in our valuation process.

We have certain CDS and options that are priced using models that primarily use market observable inputs, but contain inputs that are not observable to market participants.

We also have investments in certain fixed maturities and have issued certain annuity products that contain embedded derivatives whose fair value is at least partially determined by levels of or changes in domestic and/or foreign interest rates (short-term or long-term), exchange rates, prepayment rates, equity markets, or credit ratings/spreads. The fair values of these embedded derivatives are determined using prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. For additional information regarding the valuation of and significant assumptions associated with embedded derivatives associated with certain annuity contracts, see the "Reserves for Future Policy Benefits" section.

In addition, we have entered into coinsurance with funds withheld reinsurance arrangements that contain embedded derivatives. The fair value of the embedded derivatives is based on the change in the fair value of the underlying assets held in the trust using the valuation methods and assumptions described for our investments held.

The valuation of derivatives involves considerable judgment, is subject to considerable variability, is established using management's best estimate and is revised as additional information becomes available. As such, changes in, or deviations from, these assumptions used in such valuations can have a significant effect on our results of operations.

For additional information regarding the fair value of our investments and derivatives, see the *Fair Value Measurements* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K.

Impairments

We evaluate our available-for-sale general account investments quarterly to determine whether there has been an other-than-temporary decline in fair value below the amortized cost basis. This evaluation process entails considerable judgment and estimation. Factors considered in this analysis include, but are not limited to, the length of time and the extent to which the fair value has been less than amortized cost, the issuer's financial condition and near-term prospects, future economic conditions and market forecasts, interest rate changes and changes in ratings of the security. An extended and severe unrealized loss position on a fixed maturity may not have any impact on: (a) the ability of the issuer to service all scheduled interest and principal payments and (b) the evaluation of recoverability of all contractual cash flows or the ability to recover an amount at least equal to its amortized

cost based on the present value of the expected future cash flows to be collected. In contrast, for certain equity securities, we give greater weight and consideration to a decline in market value and the likelihood such market value decline will recover.

When assessing our intent to sell a security or if it is more likely than not we will be required to sell a security before recovery of its amortized cost basis, we evaluate facts and circumstances such as, but not limited to, decisions to rebalance the investment portfolio and sales of investments to meet cash flow or capital needs.

We use the following methodology and significant inputs to determine the amount of the OTTI credit loss:

- When determining collectability and the period over which the value is expected to recover for U.S. and foreign corporate securities, foreign government securities and state and political subdivision securities, we apply the same considerations utilized in our overall impairment evaluation process, which incorporates information regarding the specific security, the industry and geographic area in which the issuer operates and overall macroeconomic conditions. Projected future cash flows are estimated using assumptions derived from our best estimates of likely scenario-based outcomes, after giving consideration to a variety of variables that include, but is not limited to: general payment terms of the security; the likelihood that the issuer can service the scheduled interest and principal payments; the quality and amount of any credit enhancements; the security's position within the capital structure of the issuer; possible corporate restructurings or asset sales by the issuer; and changes to the rating of the security or the issuer by rating agencies.
- Additional considerations are made when assessing the unique features that apply to certain structured securities, such as subprime, Alt-A, non-agency RMBS, CMBS and ABS. These additional factors for structured securities include, but are not limited to: the quality of underlying collateral; expected prepayment speeds; loan-to-value ratio; debt service coverage ratios; current and forecasted loss severity; consideration of the payment terms of the underlying assets backing a particular security; and the payment priority within the tranche structure of the security.
- When determining the amount of the credit loss for U.S. and foreign corporate securities, foreign government securities and state and political subdivision securities, we consider the estimated fair value as the recovery value when available information does not indicate that another value is more appropriate. When information is identified that indicates a recovery value other than estimated fair value, we consider in the determination of recovery value the same considerations utilized in its overall impairment evaluation process, which incorporates available information and our best estimate of scenario-based outcomes regarding the specific security and issuer; possible corporate restructurings or asset sales by the issuer; the quality and amount of any credit enhancements; the security's position within the capital structure of the issuer; fundamentals of the industry and geographic area in which the security issuer operates; and the overall macroeconomic conditions.
- We perform a discounted cash flow analysis comparing the current amortized cost of a security to the present value of future cash flows expected to be received, including estimated defaults and prepayments. The discount rate is generally the effective interest rate of the fixed maturity prior to impairment.

Mortgage loans on real estate are all commercial mortgage loans. If a mortgage loan is determined to be impaired (i.e., when it is probable that we will be unable to collect all amounts due according to the contractual terms of the loan agreement), the carrying value of the mortgage loan is reduced to the lower of either the present value of expected cash flows from the loan, discounted at the loan's original purchase yield, or the fair value of the collateral. For those mortgages that are determined to require foreclosure, the carrying value is reduced to the fair value of the underlying collateral, net of estimated costs to obtain and sell at the point of foreclosure.

Impairment analysis of the investment portfolio involves considerable judgment, is subject to considerable variability, is established using management's best estimate and is revised as additional information becomes available. As such, changes in, or deviations from, the assumptions used in such analysis can have a significant effect on the results of operations.

For additional information regarding the evaluation process for impairments, see the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K.

Income Taxes

The results of our operations are included in the consolidated tax return of Voya Financial, Inc. Generally, our Financial Statements recognize the current and deferred income tax consequences that result from our activities during the current and preceding periods pursuant to the provisions of Income Taxes (Accounting Standards Codification Topic 740) as if we were a separate taxpayer rather than a member of Voya Financial, Inc.'s consolidated income tax return group, with the exception of any net operating loss carryforwards and capital loss carryforwards, which are recorded pursuant to the tax sharing agreement.

Under our tax sharing agreement, Voya Financial, Inc. will pay us for the tax benefits of ordinary and capital losses only in the event that the consolidated tax group actually uses the tax benefit of losses generated.

Valuation Allowances

We use certain assumptions and estimates in determining the income taxes payable or refundable to/from Voya Financial, Inc. for the current year, the deferred income tax liabilities and assets for items recognized differently in our Financial Statements from amounts shown on our income tax returns and the federal income tax expense. Determining these amounts requires analysis and interpretation of current tax laws and regulations, including the loss limitation rules associated with change in control. We exercise considerable judgment in evaluating the amount and timing of recognition of the resulting income tax liabilities and assets. These judgments and estimates are reevaluated on a periodic basis. We will continue to evaluate as regulatory and business factors change.

Our deferred tax assets and liabilities resulting from temporary differences between financial reporting and tax basis of assets and liabilities are measured at the balance sheet date using enacted tax rates expected to apply to taxable income in the years the temporary differences are expected to reverse.

Deferred tax assets represent the tax benefit of future deductible temporary differences, net operating loss carryforwards, and tax credit carryforwards. We evaluate and test the recoverability of deferred tax assets. Deferred tax assets are reduced by a valuation allowance if, based on the weight of evidence, it is more likely than not that some portion, or all, of the deferred tax assets will not be realized. Considerable judgment and the use of estimates are required in determining whether a valuation allowance is necessary and, if so, the amount of such valuation allowance. In evaluating the need for a valuation allowance, we consider many factors, including:

- The nature, frequency and severity of book income or losses in recent years;
- The nature and character of the deferred tax assets and liabilities;
- The recent cumulative book income (loss) position after adjustment for permanent differences;
- Taxable income in prior carryback years;
- Projected future taxable income, exclusive of reversing temporary differences and carryforwards;
- Projected future reversals of existing temporary differences;
- The length of time carryforwards can be utilized;
- Prudent and feasible tax planning strategies we would employ to avoid a tax benefit from expiring unused; and
- Tax rules that would impact the utilization of the deferred tax assets.

As of December 31, 2015, we have recognized $161.5 million deferred tax assets based on tax planning strategies related to unrealized gains on investment assets. These tax planning strategies support the recognition of deferred tax assets, which have been provided on deductible temporary differences, and may be adversely impacted by decreases in unrealized gains.

We recorded the following valuation allowances as of the dates indicated:

	December 31,	
($ in millions)	**2015**	**2014**
Deferred tax assets	$ 597.4 [1]	$ 549.7 [2]

[1] Includes $590.6 million and $6.8 million related to ordinary deferred tax assets and foreign tax credits, respectively.

[2] Includes $540.6 million and $9.1 million related to ordinary deferred tax assets and foreign tax credits, respectively.

Tax Contingencies

In establishing unrecognized tax benefits, we determine whether a tax position is more likely than not to be sustained under examination by the appropriate taxing authority. We also consider positions that have been reviewed and agreed to as part of an examination by the appropriate taxing authority. Tax positions that do not meet the more likely than not standard are not recognized. Tax positions that meet this standard are recognized in our Financial Statements. We measure the tax position as the largest amount of benefit that is greater than 50% likely of being realized upon ultimate resolution with the taxing authority that has full knowledge of all relevant information.

Changes in Law

Certain changes or future events, such as changes in tax legislation, completion of tax audits, planning opportunities and expectations about future outcomes could have an impact on our estimates of valuation allowances, deferred taxes, tax provisions and effective tax rates.

For example, a reduction in the corporate tax rate would most likely result in a tax expense based on the fact that, as of December 31, 2015, we have a deferred tax asset. Conversely, an increase in the corporate tax rate would most likely result in an additional tax benefit.

Contingencies

A loss contingency is an existing condition, situation or set of circumstances involving uncertainty as to possible loss that will ultimately be resolved when one or more future events occur or fail to occur. Examples of loss contingencies include pending or threatened adverse litigation, threat of expropriation of assets and actual or possible claims and assessments. Amounts related to loss contingencies involve considerable judgments and are accrued if it is probable that a loss has been incurred and the amount can be reasonably estimated, based on our best estimate of the ultimate outcome. Reserves are established reflecting management's best estimate, reviewed on a quarterly basis and revised as additional information becomes available. When a loss contingency is reasonably possible, but not probable, disclosure is made of our best estimate of possible loss, or the range of possible loss, or a statement is made that such an estimate cannot be made.

We are involved in threatened or pending lawsuits/arbitrations arising from the normal conduct of business. Due to the climate in insurance and business litigation/arbitration, suits against us sometimes include claims for substantial compensatory, consequential or punitive damages and other types of relief. Moreover, certain claims are asserted as class actions, purporting to represent a group of similarly situated individuals. It is not always possible to accurately estimate the outcome of such lawsuits/arbitrations. Therefore, changes to such estimates could be material. As facts and circumstances change, our estimates are revised accordingly. Our reserves reflect management's best estimate of the ultimate resolution.

Impact of New Accounting Pronouncements

For information regarding the impact of new accounting pronouncements, see the *Business, Basis of Presentation and Significant Accounting Policies* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K.

Results of Operations

Overview

Products currently offered by us include fixed and indexed annuities, designed to address customer needs for tax-advantaged savings, retirement needs and wealth-protection concerns as well as GICs. We stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010.

We derive our revenue mainly from (a) investment income earned on investments primarily related to annuity products with fixed investment options, GIC deposits and funding agreements, (b) Fee income generated from separate account assets supporting variable options under variable annuity contract investments, as designated by contract owners, (c) Premiums, (d) realized capital gains (losses) on investments and product guarantees and (e) certain other management fees included in Other revenue. Our Benefits and expenses primarily consist of (a) Interest credited and other benefits to contract owners/policyholders, (b) amortization of DAC and VOBA and (c) Operating expenses which consist of expenses related to the selling and servicing of the various products offered by us and other general business expenses.

($ in millions)	Year Ended December 31, 2015	2014	2013
Revenues:			
Net investment income	$ 1,305.5	$ 1,264.7	$ 1,267.2
Fee income	718.7	824.8	839.7
Premiums	505.8	537.8	436.3
Net realized capital gains (losses):			
Total other-than-temporary impairments	(30.3)	(6.0)	(12.1)
Less: Portion of other-than-temporary impairments recognized in Other comprehensive income (loss)	2.5	(0.3)	(1.8)
Net other-than-temporary impairments recognized in earnings	(32.8)	(5.7)	(10.3)
Other net realized capital gains (losses)	(98.8)	(768.4)	(2,205.5)
Total net realized capital gains (losses)	(131.6)	(774.1)	(2,215.8)
Other revenue	19.7	29.8	29.8
Total revenues	2,418.1	1,883.0	357.2
Benefits and expenses:			
Interest credited and other benefits to contract owners/policyholders	1,290.6	1,391.9	(1,855.4)
Operating expenses	486.2	489.6	462.3
Net amortization of deferred policy acquisition costs and value of business acquired	667.0	(116.0)	1,522.4
Interest expense	28.2	28.2	28.2
Other expense	25.1	16.9	31.1
Total benefits and expenses	2,497.1	1,810.6	188.6
Income (loss) before income taxes	(79.0)	72.4	168.6
Income tax expense (benefit)	(53.9)	97.3	185.5
Net income (loss)	$ (25.1)	$ (24.9)	$ (16.9)

Year Ended December 31, 2015 compared to Year Ended December 31, 2014

Our Net income (loss) for the year ended December 31, 2015 reflected a slightly higher loss than the prior period due to unfavorable changes in Net amortization of DAC and VOBA and decreases in Fee income and Premiums, mostly offset by favorable changes in Total net realized capital gains (losses), Income tax expense (benefit), Interest credited and other benefits to contract owners/policyholders and an increase in Net investment income.

Revenues

Total revenues increased $535.1 million from $1,883.0 million to $2,418.1 million primarily due to favorable changes in Total net realized capital gains (losses) and an increase in Net investment income, partially offset by decreases in Fee income and Premiums.

Net investment income increased $40.8 million from $1,264.7 million to $1,305.5 million primarily due to growth in the general account assets and higher prepayment income, partially offset by lower alternative investment income and the impact of the continued low interest rate environment on reinvestment rates.

Fee income decreased $106.1 million from $824.8 million to $718.7 million primarily due to lower average separate account assets under management ("AUM") resulting from the continued runoff of our closed block of variable annuity business.

Premiums decreased $32.0 million from $537.8 million to $505.8 million primarily due to lower payout annuities with life contingencies, which corresponds to a decrease in Interest credited and other benefits to contract owners/policyholders, partially offset by an increase in assumed premiums from an affiliate due to favorable persistency.

Total net realized capital losses decreased $642.5 million from $774.1 million to $131.6 million primarily due to favorable changes in the fair value of embedded derivatives on product guarantees, partially offset by unfavorable changes in annuity hedging and the fair value of fixed maturities using the fair value option. The favorable changes of $804.2 million in the fair value of embedded derivatives on variable annuity and fixed indexed annuity product guarantees (from a loss of $708.4 million in the prior period to a gain of $95.8 million in the current period) were due to favorable impacts resulting from interest rate movements and implied volatility, partially offset by unfavorable impacts resulting from equity market movements and nonperformance risk. Under the variable annuity and fixed indexed annuity hedge programs, changes in interest rates and equity markets during the year ended December 31, 2015 resulted in net unfavorable changes in equity, interest and foreign exchange derivatives of $69.2 million compared to prior period (losses of $72.9 million in the current period and losses of $3.7 million in the prior period). A portion of these derivative losses was ceded to SLDI under the combined coinsurance and coinsurance funds withheld agreement (gains of $54.5 million in the current period and losses of $50.0 million in the prior period) and an offset was recorded to Interest credited and other benefits to contract owners/policyholders. Unfavorable changes of $48.0 million in the fair value of fixed maturities using fair value option as a result of interest rate changes in the current period compared to the prior period also contributed to the change in Total net realized capital gains (losses).

Benefits and Expenses

Total benefits and expenses increased $686.5 million from $1,810.6 million to $2,497.1 million primarily due to unfavorable changes in Net amortization of DAC and VOBA, partially offset by favorable changes in Interest credited and other benefits to contract owners/policyholders.

Interest credited and other benefits to contract owners/policyholders decreased $101.3 million from $1,391.9 million to $1,290.6 million primarily due to net favorable changes in the embedded derivatives on the coinsurance funds withheld arrangements resulting from interest rate movements. This decrease was partially offset by the change in the amount of equity and interest rate derivative gains/losses transferred under the combined coinsurance and coinsurance funds withheld agreement with SLDI (the corresponding offsetting amount is reported in Total net realized capital gains (losses)), unfavorable impacts due to the annual assumptions review and loss recognition on sales inducements.

Net amortization of DAC and VOBA changed $783.0 million from a benefit of $116.0 million to an expense of $667.0 million primarily due to loss recognition on DAC and VOBA, unfavorable impacts due to the annual assumptions review in the current period compared to favorable unlocking in the prior period and higher amortization as a result of higher gross profits. See *Critical Accounting Judgments and Estimates* for further detail on loss recognition on DAC and VOBA.

Income Taxes

Income tax expense (benefit) changed by $151.2 million from an expense of $97.3 million to a benefit of $53.9 million primarily due to a lower increase in the valuation allowance in the current period compared to the prior period, a decrease in income before income taxes, and an increase in the dividends received deduction.

Year Ended December 31, 2014 compared to Year Ended December 31, 2013

Our Net income (loss) for the year ended December 31, 2014 reflected a higher loss than 2013 primarily due to unfavorable changes in Interest credited and other benefits to contract owners/policyholders, an increase in Operating expenses and a decrease in Fee income, partially offset by favorable changes in Net amortization of DAC and VOBA, favorable changes in Total net realized capital gains (losses), an increase in Premiums, favorable changes in Income tax expense (benefit) and a decrease in Other expense.

Revenues

Total revenues increased $1,525.8 million from $357.2 million to $1,883.0 million primarily due to favorable changes in Total net realized capital gains (losses) and an increase in Premiums, partially offset by a decrease in Fee income.

Fee income decreased $14.9 million from $839.7 million to $824.8 million primarily due to lower average separate account AUM driven by the continued runoff of our variable annuity business.

Premiums increased $101.5 million from $436.3 million to $537.8 million primarily due to higher payout annuities with life contingencies, partially offset by lower assumed stop loss premiums due to the novation of a reinsurance agreement in the third quarter of 2013.

Total net realized capital gains (losses) changed $1,441.7 million from a loss of $2,215.8 million to a loss of $774.1 million due to favorable changes in annuity hedging derivatives, partially offset by unfavorable changes in the fair value of embedded derivatives on product guarantees. Under the variable annuity and fixed indexed annuity hedge programs, changes in equity and interest markets during the year ended December 31, 2014 resulted in favorable changes in equity, interest and foreign exchange derivatives of $3,067.4 million during 2014 (net losses of $3.7 million in 2014 compared to net losses of $3,071.1 million during 2013). A portion of these derivative losses were ceded to SLDI under the combined coinsurance and coinsurance funds withheld agreement (losses of $50.0 million for 2014 and losses of $2,991.4 million for 2013) and an offset was recorded to Interest credited and other benefits to contract owners/policyholders. Favorable net changes of $39.0 million in the fair value of fixed maturities using fair value option as a result of decreasing interest rates in 2014 compared to increasing interest rates in 2013 also contributed to the variance. Partially offsetting these variances were unfavorable net changes of $1,670.1 million in the fair value of embedded derivatives on variable annuity and fixed indexed annuity product guarantees (from a gain of $961.7 million for the year ended December 31, 2013 to a loss of $708.4 million for the year ended December 31, 2014) due to unfavorable impacts from interest rates, equity market movements and implied volatility, partially offset by the favorable impact from nonperformance risk and annual assumption changes.

Benefits and Expenses

Total benefits and expenses increased $1,622.0 million from $188.6 million to $1,810.6 million primarily due to unfavorable changes in Interest credited and other benefits to contract owners/policyholders and an increase in Operating expenses, partially offset by favorable changes in Net amortization of DAC and VOBA and a decrease in Other expense.

Interest credited and other benefits to contract owners/policyholders changed $3,247.3 million from a benefit of $1,855.4 million to an expense of $1,391.9 million primarily due to the change in the amount of equity and interest rate derivative losses transferred under the combined coinsurance and coinsurance funds withheld agreement with SLDI (the corresponding offsetting amount is reported in Total net realized capital gains (losses)), the change in the embedded derivative on the two coinsurance funds withheld arrangements and unfavorable guaranteed benefit reserve changes due to lower fund returns compared to 2013. These increases were partially offset by lower amortization of sales inducements as a result of lower gross profits in 2014.

Operating expenses increased $27.3 million from $462.3 million to $489.6 million as a result of several factors, primarily increased costs in 2014 related to rebranding, initial costs related to the outsourcing of the actuarial valuation, modeling and hedging functions for our retail variable annuity products in 2014 and higher expenses on non-qualified retirement plans related to the immediate recognition of actuarial losses in 2014 compared to actuarial gains in 2013, resulting from changes in assumptions primarily due to discount rates, mortality and actual versus expected results. In addition, higher commissions and higher administrative expenses contributed to the increase. These increases were partially offset by a favorable cost of reinsurance due to the novation of a reinsurance agreement in the first quarter of 2014.

Net amortization of DAC and VOBA changed $1,638.4 million from an expense of $1,522.4 million to a benefit of $116.0 million primarily due to lower amortization as a result of lower gross profits in 2014 compared to 2013 and $306.0 million of loss recognition on DAC and VOBA in 2013 that did not reoccur in 2014. Favorable DAC and VOBA unlocking resulting from prospective assumption changes also contributed to the decrease. Partially offsetting these variances was favorable DAC and VOBA unlocking in 2013 that did not repeat in 2014.

Other expense decreased $14.2 million from $31.1 million to $16.9 million primarily due to lower amortization on deferred reinsurance losses as a result of prospective assumption changes.

Income Taxes

Income tax expense (benefit) decreased $88.2 million from $185.5 million to $97.3 million primarily due to a lower increase in the valuation allowance and a decrease in income before taxes, partially offset by a decrease in the dividend received deduction.

Financial Condition

Investments

Investment Strategy

Our investment strategy seeks to achieve sustainable risk-adjusted returns by focusing on principal preservation, disciplined matching of asset characteristics with liability requirements and the diversification of risks. Investment activities are undertaken

according to investment policy statements that contain internally established guidelines and risk tolerances and are required to comply with applicable laws and insurance regulations. Risk tolerances are established for credit risk, credit spread risk, market risk, liquidity risk and concentration risk across issuers, sectors and asset types that seek to mitigate the impact of cash flow variability arising from these risks.

Segmented portfolios are established for groups of products with similar liability characteristics. Our investment portfolio consists largely of high quality fixed maturities and short-term investments, investments in commercial mortgage loans, alternative investments and other instruments, including a small amount of equity holdings. Fixed maturities include publicly issued corporate bonds, government bonds, privately placed notes and bonds, bonds issued by states and municipalities, Other asset-backed securities ("ABS"), and traditional Mortgage-backed securities ("MBS").

We use derivatives for hedging purposes to reduce our exposure to the cash flow variability of assets and liabilities, interest rate risk, credit risk and market risk. In addition, we use credit derivatives to replicate exposure to individual securities or pools of securities as a means of achieving credit exposure similar to bonds of the underlying issuer(s) more efficiently.

See the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K.

Portfolio Composition

The following table presents the investment portfolio as of the dates indicated:

	December 31, 2015		December 31, 2014	
($ in millions)	Carrying Value	% of Total	Carrying Value	% of Total
Fixed maturities, available-for-sale, excluding securities pledged	$ 22,458.4	76.9%	$ 22,169.4	78.9%
Fixed maturities, at fair value using the fair value option	547.4	1.9%	480.8	1.7%
Equity securities, available-for-sale	19.2	0.1%	6.7	-%
Short-term investments[(1)]	1,069.4	3.7%	746.8	2.7%
Mortgage loans on real estate	3,310.9	11.3%	2,854.4	10.2%
Policy loans	79.8	0.3%	87.4	0.3%
Limited partnerships/corporations	186.3	0.6%	172.9	0.6%
Derivatives	799.4	2.7%	891.4	3.2%
Other investments	48.6	0.2%	49.4	0.2%
Securities pledged	672.4	2.3%	626.8	2.2%
Total investments	$ 29,191.8	100.0%	$ 28,086.0	100.0%

(1) Short-term investments include investments with remaining maturities of one year or less, but greater than 3 months, at the time of purchase.

Fixed Maturities

Total fixed maturities by market sector, including securities pledged, were as presented below as of the dates indicated:

	December 31, 2015			
($ in millions)	Amortized Cost	% of Total	Fair Value	% of Total
Fixed maturities:				
U.S. Treasuries	$ 992.7	4.3%	$ 1,058.7	4.5%
U.S. Government agencies and authorities	79.4	0.3%	81.9	0.3%
State, municipalities and political subdivisions	359.1	1.5%	360.5	1.5%
U.S. corporate public securities	10,718.9	46.1%	10,871.9	45.9%
U.S. corporate private securities	2,365.0	10.2%	2,394.4	10.1%
Foreign corporate public securities and foreign governments[1]	2,826.9	12.2%	2,793.0	11.8%
Foreign corporate private securities[1]	2,592.9	11.2%	2,626.0	11.1%
Residential mortgage-backed securities	1,746.8	7.5%	1,885.1	8.0%
Commercial mortgage-backed securities	1,311.0	5.6%	1,343.4	5.7%
Other asset-backed securities	257.6	1.1%	263.3	1.1%
Total fixed maturities, including securities pledged	$ 23,250.3	100.0%	$ 23,678.2	100.0%

[1] Primarily U.S. dollar denominated.

	December 31, 2014			
($ in millions)	Amortized Cost	% of Total	Fair Value	% of Total
Fixed maturities:				
U.S. Treasuries	$ 843.0	3.9%	$ 926.1	4.0%
U.S. Government agencies and authorities	78.9	0.4%	83.4	0.3%
State, municipalities and political subdivisions	155.4	0.7%	164.4	0.7%
U.S. corporate public securities	9,651.4	44.1%	10,307.6	44.3%
U.S. corporate private securities	2,026.9	9.3%	2,140.8	9.2%
Foreign corporate public securities and foreign governments[1]	2,716.9	12.4%	2,825.1	12.2%
Foreign corporate private securities[1]	2,683.6	12.3%	2,850.7	12.2%
Residential mortgage-backed securities	1,881.8	8.6%	2,050.5	8.8%
Commercial mortgage-backed securities	1,531.7	7.0%	1,627.5	7.0%
Other asset-backed securities	292.7	1.3%	300.9	1.3%
Total fixed maturities, including securities pledged	$ 21,862.3	100.0%	$ 23,277.0	100.0%

[1] Primarily U.S. dollar denominated.

As of December 31, 2015, the average duration of our fixed maturities portfolio, including securities pledged, is between 6.0 and 6.5 years.

Fixed Maturities Credit Quality - Ratings

The Securities Valuation Office ("SVO") of the NAIC evaluates the fixed maturity security investments of insurers for regulatory reporting and capital assessment purposes and assigns securities to one of six credit quality categories called "NAIC designations." An internally developed rating is used as permitted by the NAIC if no rating is available. These designations are generally similar to the credit quality designations of the NAIC acceptable rating organizations ("ARO") for marketable fixed maturity securities, called rating agency designations except for certain structured securities as described below. NAIC designations of "1," highest quality and "2," high quality, include fixed maturity securities generally considered investment grade by such rating organizations. NAIC designations 3 through 6 include fixed maturity securities generally considered below investment grade by such rating organizations.

The NAIC designations for structured securities, including subprime and Alt-A RMBS, are based upon a comparison of the bond's amortized cost to the NAIC's loss expectation for each security. Securities where modeling results in no expected loss in each scenario are considered to have the highest designation of NAIC 1. A large percentage of our RMBS securities carry the NAIC 1 designation while the ARO rating indicates below investment grade. This is primarily due to the credit and intent impairments recorded by us that reduced the amortized cost on these securities to a level resulting in no expected loss in any scenario, which corresponds to the NAIC 1 designation. The methodology reduces regulatory reliance on rating agencies and allows for greater regulatory input into the assumptions used to estimate expected losses from such structured securities. In the tables below, we present the rating of structured securities based on ratings from the NAIC methodologies described above (which may not correspond to rating agency designations). NAIC designations (e.g., NAIC 1-6) are based on the NAIC methodologies.

As a result of time lags between the funding of investments, the finalization of legal documents and the completion of the SVO filing process, the fixed maturity portfolio generally includes securities that have not yet been rated by the SVO as of each balance sheet date, such as private placements. Pending receipt of SVO ratings, the categorization of these securities by NAIC designation is based on the expected ratings indicated by internal analysis.

Information about certain of our fixed maturity securities holdings by the NAIC designation is set forth in the following tables. Corresponding rating agency designation does not directly translate into NAIC designation, but represents our best estimate of comparable ratings from rating agencies, including Moody's, S&P and Fitch. If no rating is available from a rating agency, then an internally developed rating is used. As of December 31, 2015 and 2014, the weighted average NAIC quality rating of our fixed maturities portfolio was 1.5.

The fixed maturities in our portfolio are generally rated by external rating agencies and, if not externally rated, are rated by us on a basis similar to that used by the rating agencies. As of December 31, 2015 and 2014, the weighted average quality rating of our fixed maturities portfolio was A. Ratings are derived from three ARO ratings and are applied as follows, based on the number of agency ratings received:

- when three ratings are received then the middle rating is applied;
- when two ratings are received then the lower rating is applied;
- when a single rating is received, the ARO rating is applied; and
- when ratings are unavailable then an internal rating is applied.

The following tables present credit quality of fixed maturities, including securities pledged, using NAIC designations as of the dates indicated:

($ in millions)	December 31, 2015						
NAIC Quality Designation	**1**	**2**	**3**	**4**	**5**	**6**	**Total Fair Value**

Fixed maturities rated BB and below may have speculative characteristics and changes in economic conditions or other circumstances that are more likely to lead to a weakened capacity of the issuer to make principal and interest payments than is the case with higher rated fixed maturities.

Unrealized Capital Losses

Gross unrealized capital losses on fixed maturities, including securities pledged, increased $377.4 million from $93.4 million to $470.8 million for the year ended December 31, 2015. The increase in gross unrealized capital losses was primarily due to rising interest rates and widening credit spreads. Gross unrealized losses on fixed maturities, including securities pledged, decreased $230.0 million from $323.4 million to $93.4 million for the year ended December 31, 2014. The decrease in gross unrealized capital losses was primarily due to declining interest rates.

As of December 31, 2015 and 2014 , we did not have any fixed maturities with an unrealized capital loss in excess of $10.0 million.

As of December 31, 2015 and 2014, we had $2.2 billion and $2.5 billion, fair value of energy sector fixed maturity securities, constituting 9.3% and 10.7%, of total fixed maturities portfolio, with gross unrealized capital losses of $175.9 million and $27.5 million, respectively. See the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information on unrealized capital losses.

Subprime and Alt-A Mortgage Exposure

Pre-2008 vintage subprime and Alt-A mortgage collateral continues to distance itself from the credit crisis and payment performance reflects a housing market firmly entrenched in recovery. While collateral losses continue to be realized, the amounts are steadily decreasing. Serious delinquencies and other measures of performance, like prepayments and loan defaults, have also displayed sustained periods of improvement. Reflecting these fundamental improvements, related bond prices and sector liquidity have increased substantially since the credit crisis. Home prices have moved steadily higher, further supporting payment performance. Year-over-year home price measures, while at a lower magnitude than experienced in recent years, appear to have stabilized at sustainable levels, when measured on a nationwide basis. This backdrop remains supportive of continued improvement in overall borrower payment behavior. In managing our risk exposure to subprime and Alt-A mortgages, we take into account collateral performance and structural characteristics associated with our various positions.

We do not originate or purchase subprime or Alt-A whole-loan mortgages. Subprime lending is the origination of loans to customers with weaker credit profiles. We define Alt-A mortgages to include the following: residential mortgage loans to customers who have strong credit profiles but lack some element(s), such as documentation to substantiate income; residential mortgage loans to borrowers that would otherwise be classified as prime but whose loan structure provides repayment options to the borrower that increase the risk of default; and any securities backed by residential mortgage collateral not clearly identifiable as prime or subprime.

We have exposure to RMBS, CMBS and ABS. Our exposure to subprime mortgage-backed securities is primarily in the form of ABS structures collateralized by subprime residential mortgages and the majority of these holdings were included in Other ABS under "Fixed Maturities" above. As of December 31, 2015, the fair value, amortized cost, and gross unrealized losses related to our exposure to subprime mortgage-backed securities totaled $118.9 million, $116.3 million and $5.6 million, respectively, representing 0.5% of total fixed maturities, including securities pledged, based on fair value. As of December 31, 2014, the fair value, amortized cost, and gross unrealized losses related to our exposure to subprime mortgage-backed securities totaled $152.6 million, $148.5 million and $7.0 million, respectively, representing 0.7% of total fixed maturities, including securities pledged, based on fair value.

The following table presents our exposure to subprime mortgage-backed securities by credit quality using NAIC designations, ARO ratings and vintage year as of the dates indicated:

	% of Total Subprime Mortgage-backed Securities

Commercial Mortgage-backed and Other Asset-backed Securities

CMBS investments represent pools of commercial mortgages that are broadly diversified across property types and geographical areas. Delinquency rates on commercial mortgages increased over the course of 2009 through mid-2012. Since then, the steep pace of increases observed in the early years following the credit crisis has ceased, and the percentage of delinquent loans declined through 2013 and the majority of 2014. In 2015, this trend has generally continued (certain months did post marginal increases), leaving delinquency measures at multi-year lows. Other performance metrics like vacancies, property values and rent levels have also continued to improve, although these metrics are not observed uniformly, differing by dimensions such as geographic location and property type. These improvements have been buoyed by some of the same macro-economic tailwinds alluded to in regards to our subprime and Alt-A mortgage exposure. In addition, a robust environment for property refinancing has continued to be supportive of improving credit performance metrics throughout the year. The new issue market for CMBS has been a meaningful contributor to the refinance environment. While spread performance in the second half of the year ended December 31, 2015 is characterized as volatile, it has steadily continued its recovery from the credit crisis. In terms of aggregate primary issuance volume, 2015 represents another new post crisis high.

For non-student loan consumer ABS, delinquency and loss rates have been maintained at levels considered low by historical standards and indicative of high credit quality. Relative strength in various credit metrics across multiple types of asset-backed loans have been observed on a sustained basis.

The following table presents our exposure to CMBS holdings by credit quality using NAIC designations, ARO ratings and vintage year as of the dates indicated:

	% of Total CMBS

As of December 31, 2015, the fair value and amortized cost related to our exposure to Other ABS, excluding subprime exposure, totaled $147.0 million and $142.8 million, respectively. There were no gross unrealized losses related to Other ABS. As of December 31, 2014, the fair value and amortized cost related to our exposure to Other ABS, excluding subprime exposure, totaled $152.5 million and $146.3 million, respectively. There were no gross unrealized losses related to Other ABS.

As of December 31, 2015, Other ABS was broadly diversified both by type and issuer with credit card receivables comprising 55.3% of total Other ABS, excluding subprime exposure. There were no automobile receivables and nonconsolidated collateralized loan obligations ("CLOs") related to Other ABS. As of December 31, 2014, Other ABS was broadly diversified both by type and

issuer with credit card receivables, nonconsolidated CLOs and automobile receivables, comprising 54.8%, 2.6% and 1.2%, respectively, of total Other ABS, excluding subprime exposure.

The following table presents our exposure to Other ABS holdings, excluding subprime exposure, by credit quality using NAIC designations, ARO ratings and vintage year as of the dates indicated:

Troubled Debt Restructuring

Although our portfolio of commercial mortgage loans and private placements is high quality, a small number of these contracts have been granted modifications, certain of which are considered to be troubled debt restructurings. See the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information on troubled debt restructuring.

Mortgage Loans on Real Estate

We rate commercial mortgages to quantify the level of risk. We place those loans with higher risk on a watch list and closely monitor these loans for collateral deficiency or other credit events that may lead to a potential loss of principal and/or interest. If we determine the value of any mortgage loan to be OTTI (i.e., when it is probable that we will be unable to collect on amounts due according to the contractual terms of the loan agreement), the carrying value of the mortgage loan is reduced to either the present value of expected cash flows from the loan, discounted at the loan's effective interest rate, or fair value of the collateral. For those mortgages that are determined to require foreclosure, the carrying value is reduced to the fair value of the underlying collateral, net of estimated costs to obtain and sell at the point of foreclosure. The carrying value of the impaired loans is reduced by establishing an other-than-temporary write-down recorded in Net realized capital gains (losses) in the Statements of Operations.

Loan-to-value ("LTV") and debt service coverage ("DSC") ratios are measures commonly used to assess the risk and quality of commercial mortgage loans. The LTV ratio, calculated at time of origination, is expressed as a percentage of the amount of the loan relative to the value of the underlying property. An LTV ratio in excess of 100% indicates the unpaid loan amount exceeds the value of the underlying collateral. The DSC ratio, based upon the most recently received financial statements, is expressed as a percentage of the amount of a property's Net income (loss) to its debt service payments. A DSC ratio of less than 1.0 indicates that property's operations do not generate sufficient income to cover debt payments. These ratios are utilized as part of the review process described above.

As of December 31, 2015 and 2014, our mortgage loans on real estate portfolio had a weighted average DSC of 2.2 and 2.0 times, and a weighted average LTV ratio of 60.4% and 60.5%, respectively. See the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information on mortgage loans on real estate.

Other-Than-Temporary Impairments

We evaluate available-for-sale fixed maturities and equity securities for impairment on a regular basis. The assessment of whether impairments have occurred is based on a case-by-case evaluation of the underlying reasons for the decline in estimated fair value. See the *Business, Basis of Presentation and Significant Accounting Policies* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for the policy used to evaluate whether the investments are other-than-temporarily impaired.

For the year ended December 31, 2015, we recorded $7.3 million of credit related OTTI of which the primary contributor was $4.2 million of write-downs recorded in the Foreign Government and Public sector. For the year ended December 31, 2015, we recorded $25.5 million of intent related OTTI, which were primarily related to the intent to sell positions in energy sector public corporate credits either because of a commitment to sell or an expectation that we may be required to sell as a result of our investment guidelines. See the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information on OTTI.

European Exposures

We closely monitor our exposures to European sovereign debt in general, with a primary focus on the sovereign debt of Greece, Ireland, Italy, Portugal and Spain (which we refer to as "peripheral Europe"), as these countries have applied for support from the European Financial Stability Facility or received support from the European Central Bank via government bond purchases in the secondary market.

The financial turmoil in Europe continues to be a potential threat to global capital markets and remains a challenge to global financial stability. Additionally, the possibility of capital market volatility spreading through a highly integrated and interdependent banking system remains. Despite signs of continuous improvement in the region, it is our view that the risk among European sovereigns and financial institutions still warrants scrutiny, in addition to our customary surveillance and risk monitoring, given how highly correlated these sectors of the region have become.

The United States and European Union continue to maintain sanctions against select Russian businesses in response to the ongoing conflict in eastern Ukraine. We remain comfortable with our aggregate Russian exposure of $51.8 million, given its relatively small allocation in our total investment portfolio.

We quantify and allocate our exposure to the region, as described in the table below, by attempting to identify aspects of the region or country risk to which we are exposed. Among the factors we consider are the nationality of the issuer, the nationality of the issuer's ultimate parent, the corporate and economic relationship between the issuer and its parent, as well as the political, legal and economic environment in which each functions. By undertaking this assessment, we believe that we develop a more accurate assessment of the actual geographic risk, with a more integrated understanding of contributing factors to the full risk profile of the issuer.

In the normal course of our ongoing risk and portfolio management process, we closely monitor compliance with a credit limit hierarchy designed to minimize overly concentrated risk exposures by geography, sector and issuer. This framework takes into account various factors such as internal and external ratings, capital efficiency and liquidity and is overseen by a combination of Investment and Corporate Risk Management, as well as insurance portfolio managers focused specifically on managing the investment risk embedded in our portfolio.

As of December 31, 2015, we had $210.3 million of exposure to peripheral Europe, which consisted of a broadly diversified portfolio of credit-related investments primarily in the industrial and utility sectors. We did not have any fixed maturities or equity securities exposure to European sovereigns or financial institutions based in peripheral Europe. Peripheral European exposure included non-sovereign exposure in Ireland of $43.6 million, Italy of $91.8 million and Spain of $74.9 million. We did not have any exposure to Greece or Portugal. As of December 31, 2015, we did not have any exposure to derivative assets within the financial institutions based in peripheral Europe. For purposes of calculating the derivative assets exposure, we have aggregated exposure to single name and portfolio product CDS, as well as non-CDS derivative exposure for which it either has counterparty or direct credit exposure to a company whose country of risk is in scope.

Among the remaining $2.9 billion of total non-peripheral European exposure, we had a portfolio of credit-related assets similarly diversified by country and sector across developed and developing Europe. As of December 31, 2015, our sovereign exposure was $75.2 million, which consisted of fixed maturities. We also had $440.0 million in net exposure to non-peripheral financial institutions with a concentration in France of $117.7 million, The Netherlands of $90.3 million, Switzerland of $91.5 million and the United Kingdom of $109.8 million. The balance of $2.3 billion was invested across non-peripheral, non-financial institutions.

In addition to aggregate concentration in the United Kingdom of $1,080.7 million, we had significant non-peripheral European total country exposures in The Netherlands of $386.6 million, in France of $390.9 million, in Germany of $266.8 million and in Switzerland of $315.1 million. We place additional scrutiny on our financial exposure in the United Kingdom, France, Switzerland and The Netherlands given our concern for the potential for volatility to spread through the European banking system. We believe the primary risk results from market value fluctuations resulting from spread volatility and the secondary risk is default risk, dependent upon the strength of the recovery of economic conditions in Europe.

The following table represents our European exposures at fair value and amortized cost as of December 31, 2015.

($ in millions)	Fixed Maturity and Equity Securities					Loan and Receivables	Derivative Assets					
	Sovereign	Financial Institutions	Non-Financial Institutions	Total (Fair Value)	Total (Amortized Cost)	Sovereign (Amortized Cost)	Sovereign	Financial Institutions	Non-Financial Institutions	Less: Margin & Collateral	Total, (Fair Value)	Net Non-U.S. Funded[1]
Ireland	$ -	$ -	$ 43.2	$ 43.2	$ 39.7	$ -	$ -	$ -	$ 0.4	$ -	$ 0.4	$ 43.6

Total	$ 75.2	$ 359.9	$ 2,546.7	$2,981.8	$ 2,913.7	$ -	$ -	$ 473.8	$ 0.8	$ 393.7	$ 80.9	$ 3,062.7

[1] Represents: (i) Fixed maturity and equity securities at fair value; and (ii) Derivative assets at fair value.
[2] Other non-peripheral countries include: Belgium, Croatia, Denmark, Finland, Kazakhstan, Latvia, Lithuania, Russian Federation, Slovakia, Sweden and Turkey.

Liquidity and Capital Resources

Liquidity is our ability to generate sufficient cash flows to meet the cash requirements of operating, investing and financing activities. Capital refers to our long-term financial resources available to support the business operations and contribute to future growth. Our ability to generate and maintain sufficient liquidity and capital depends on the profitability of the businesses, timing of cash flows on investments and products, general economic conditions and access to the capital markets and the alternate sources of liquidity and capital described herein.

Liquidity Management

Our principal available sources of liquidity are annuity product charges, GICs, funding agreements and fixed annuity deposits, investment income, proceeds from the maturity and sale of investments, proceeds from debt issuance and borrowing facilities, repurchase agreements, securities lending, reinsurance and capital contributions. Primary uses of these funds are payments of commissions and operating expenses, interest and premium credits, payments under guaranteed death and living benefits, investment purchases, repayment of debt and contract maturities, withdrawals and surrenders and payment of dividends.

Our liquidity position is managed by maintaining adequate levels of liquid assets, such as cash, cash equivalents and short-term investments. As part of the liquidity management process, different scenarios are modeled to determine whether existing assets are adequate to meet projected cash flows. Key variables in the modeling process include interest rates, equity market movements, quantity and type of interest and equity market hedges, anticipated contract owner behavior, market value of the general account assets, variable separate account performance and implications of rating agency actions.

The fixed account liabilities are supported by a general account portfolio, principally composed of fixed rate investments with matching duration characteristics that can generate predictable, steady rates of return. The portfolio management strategy for the fixed account considers the assets available-for-sale. This strategy enables us to respond to changes in market interest rates, prepayment risk, relative values of asset sectors and individual securities and loans, credit quality outlook and other relevant factors. The objective of portfolio management is to maximize returns, taking into account interest rate and credit risk, as well as other risks. Our asset/liability management discipline includes strategies to minimize exposure to loss as interest rates and economic and market conditions change. In executing this strategy, we use derivative instruments to manage these risks. Our derivative counterparties are of high credit quality.

Liquidity and Capital Resources

Additional sources of liquidity include borrowing facilities to meet short-term cash requirements that arise in the ordinary course of business. We maintain the following agreements:

- A reciprocal loan agreement with Voya Financial, Inc., an affiliate, whereby either party can borrow from the other up to 3.0% of our statutory net admitted assets, excluding Separate Accounts, as of the preceding December 31. As of December 31, 2015 and 2014, we did not have any outstanding receivable/payable with Voya Financial, Inc. under the reciprocal loan agreement. We and Voya Financial, Inc. continue to maintain the reciprocal loan agreement and future borrowings by either party will be subject to the reciprocal loan terms summarized above. Effective January 2014, interest on any borrowing by either us or Voya Financial, Inc. is charged at a rate based on the prevailing market rate for similar third-party borrowings or securities.

- We hold approximately 50.6% of our assets in marketable securities. These assets include cash, U.S. Treasuries, Agencies, Corporate Bonds, ABS, CMBS and collateralized mortgage obligations ("CMO") and Equity securities. In the event of a temporary liquidity need, cash may be raised by entering into repurchase agreements, dollar rolls and/or security lending agreements by temporarily lending securities and receiving cash collateral. Under our Liquidity Plan, up to 12% of our general account statutory admitted assets may be allocated to repurchase, dollar roll and securities lending programs. At the time a temporary cash need arises, the actual percentage of admitted assets available for repurchase transactions will depend upon outstanding allocations to the three programs. As of December 31, 2015 and 2014, we had securities lending obligations of $153.6 million and $125.4 million respectively, which, for both years, represents approximately 0.2% of our general account statutory admitted assets.

Management believes that our sources of liquidity are adequate to meet our short-term cash obligations.

Capital Contributions and Dividends

During the years ended December 31, 2015 and 2014, we did not receive any capital contributions from our Parent.

During the year ended December 31, 2015, we declared an ordinary dividend to our parent in the amount of $394.0 million, which was paid to our Parent on May 20, 2015. During the year ended December 31, 2014, we paid an ordinary dividend in the amount of $216.0 million to our Parent.

During the year ended December 31, 2015, we declared an extraordinary distribution in the amount of $98.0 million, subject to receipt of approval by the Iowa Insurance Division. The Iowa Insurance Division provided its approval on June 25, 2015, and we paid the extraordinary distribution to our Parent on June 26, 2015.

Collateral

Under the terms of our Over-The-Counter ("OTC") Derivative International Swaps and Derivatives Association, Inc. ("ISDA") agreements, we may receive from, or deliver to, counterparties collateral to assure that all terms of the ISDA agreements will be met with regard to the Credit Support Annex ("CSA"). The terms of the CSA call for us to pay interest on any cash received equal to the Federal Funds rate. To the extent cash collateral is received and delivered, it is included in Payables under securities loan agreements, including collateral held and Short-term investments under securities loan agreements, including collateral delivered, respectively, on the Balance Sheets and is reinvested in short-term investments. Collateral held is used in accordance with the CSA to satisfy any obligations. Investment grade bonds owned by us are the source of non-cash collateral posted, which is reported in Securities pledged on the Balance Sheets. As of December 31, 2015, we held $423.0 million and $0.4 million of net cash collateral related to OTC derivative contracts and cleared derivative contracts, respectively. As of December 31, 2014, we held $268.5 million of net cash collateral and pledged $5.8 million of net cash collateral related to OTC derivative contracts and cleared derivative contracts, respectively. In addition, as of December 31, 2015, we delivered $524.5 million of securities and held $12.9 million of securities as collateral. As of December 31, 2014, we delivered $505.6 million of securities and held $130.5 million of securities as collateral.

Reinsurance Agreements

Reinsurance Ceded

As of December 31, 2015 and 2014, total reserves ceded to affiliates were $5.0 billion and $3.7 billion, respectively. For the years ended December 31, 2015, 2014 and 2013, premiums ceded to affiliates were $404.5 million, $502.5 million and $112.2 million, respectively.

Waiver of Premium - Coinsurance Funds Withheld

Effective October 1, 2010, we entered into a coinsurance funds withheld agreement with an affiliate, SLDI. Under the terms of the agreement, we ceded to SLDI 100% of the group life waiver of premium liability (except for groups covered under rate credit agreements) assumed from ReliaStar Life Insurance Company ("RLI"), an affiliate, related to the Group Annual Term Coinsurance Funds Withheld agreement between us and RLI described under "Reinsurance Assumed" below.

As of December 31, 2015 and 2014, the value of the funds withheld liability under this agreement was $170.6 million and $180.4 million, respectively, which is included in Funds held under reinsurance treaties with affiliates on the Balance Sheets. In addition, as of December 31, 2015 and 2014, we had an embedded derivative under this agreement with a value of $(5.6) million and $3.6 million, respectively, which is recorded in Funds held under reinsurance treaties with affiliates on the Balance Sheets. As of December 31, 2015 and 2014, reserves ceded under this agreement were $203.6 million and $216.7 million, respectively.

Guaranteed Living Benefit - Coinsurance and Coinsurance Funds Withheld

Effective June 30, 2008, we entered into an automatic reinsurance agreement with an affiliate, SLDI, covering 100% of the benefits guaranteed under specific variable annuity guaranteed living benefit riders attached to certain variable annuity contracts issued by us on or after January 1, 2000.

Also effective June 30, 2008, we entered into a services agreement with SLDI, under which we provide certain actuarial risk modeling consulting services to SLDI with respect to hedge positions undertaken by SLDI in connection with the reinsurance

agreement. For the years ended December 31, 2015, 2014 and 2013, revenue related to the agreement was $10.9 million, $12.3 million, and $12.3 million, respectively.

Effective July 1, 2009, the reinsurance agreement was amended and restated to change the reinsurance basis from coinsurance to a combined coinsurance and coinsurance funds withheld basis. On July 31, 2009, SLDI transferred assets with a market value of $3.2 billion to us and we deposited those assets into a funds withheld trust account. As of December 31, 2015 and 2014, the assets on deposit in the trust account were $6.6 billion and $5.5 billion, respectively. We also established a corresponding funds withheld liability to SLDI, which is included in Funds held under reinsurance treaties with affiliates on the Balance Sheets. Funds held under reinsurance treaties with affiliates had a balance of $6.6 billion and $5.3 billion as of December 31, 2015 and 2014, respectively. In addition, as of December 31, 2015 and 2014, we had an embedded derivative with a value of $15.8 million and $207.4 million, respectively, which is recorded in Funds held under reinsurance treaties with affiliates on the Balance Sheets.

Also effective July 1, 2009, we and SLDI entered into an asset management services agreement, under which SLDI serves as asset manager for the funds withheld account. SLDI has retained its affiliate, Voya Investment Management LLC as sub-advisor for the funds withheld account.

Effective October 1, 2011, we and SLDI entered into an amended and restated automatic reinsurance agreement in order to provide more flexibility to us and SLDI with respect to the collateralization of the reserves related to the variable annuity guaranteed living benefits reinsured under the agreement. As of December 31, 2015 and 2014, reserves ceded by us under this agreement were $4.8 billion and $3.4 billion, respectively. In addition, a deferred loss in the amount of $283.3 million and $308.1 million as of December 31, 2015 and 2014, respectively, is included in Other assets on the Balance Sheets and is amortized over the period of benefit in Other expense in the Statements of Operations.

On May 8, 2013, following the Voya Financial, Inc. initial public offering ("IPO"), Voya Financial, Inc. made a capital contribution in the amount of $1.8 billion into SLDI, which SLDI deposited into the funds withheld trust account established to provide collateral for the variable annuity guaranteed living benefit riders ceded to SLDI under the amended and restated automatic reinsurance agreement. Upon deposit of such contributed capital into the funds withheld trust, we submitted to ING Bank N.V. ("ING Bank") $1.5 billion of contingent capital letters of credit ("LOC") issued by ING Bank under the $1.5 billion contingent capital LOC facility between ING Bank and SLDI, and the contingent capital LOCs were canceled and the facility was terminated.

Multi-year Guaranteed Fixed Annuity - Coinsurance

Effective May 1, 2005, we entered into a coinsurance agreement with our affiliate, Security Life of Denver Insurance Company ("SLD"). Under the terms of the agreement, SLD assumed and accepted the responsibility for paying, when due, 100% of the liabilities arising under the multi-year guaranteed fixed annuity contracts issued by us between January 1, 2001 and December 31, 2003. In addition, we assigned SLD all future premiums received by us attributable to the ceding contracts.

Under the terms of the agreement, the Company ceded $2.5 billion in account balances and transferred a ceding commission and $2.7 billion in assets to SLD, resulting in a realized capital gain of $47.9 million to the Company, which reduced the ceding commission.

The coinsurance agreement was accounted for using the deposit method. As such, $2.7 billion of Deposit receivable from affiliate was established on the Balance Sheets. As of December 31, 2014, the deposit receivable was $653.2 million. On September 25, 2015, we recaptured, via a commutation agreement, the multi-year guaranteed fixed annuity contracts ceded under the coinsurance agreement. Under the terms of the agreement, which was effective July 1, 2015, the Company received net assets in the amount of $618.7 million in satisfaction of the deposit receivable balance and recognized a pre-tax loss of $4.2 million. We incurred amortization expense of the negative ceding commission of $3.2 million, $6.6 million and $4.8 million, for the years ended December 31, 2015, 2014 and 2013, respectively, which is recorded in Other expense in the Statements of Operations.

Universal Life - Coinsurance

Effective January 1, 2000, we entered into a 100% coinsurance agreement with our affiliate, SLD, covering certain universal life policies which had been issued and in force as of, as well as any such policies issued after, the effective date of the agreement. As of December 31, 2015 and 2014, reserves ceded by us under this agreement were $20.6 million and $20.0 million, respectively.

Guaranteed Investment Contract - Coinsurance

Effective August 20, 1999, we entered into a Facultative Coinsurance Agreement with an affiliate, SLD. Under the terms of the agreement, we facultatively cede, from time to time, certain GICs to SLD on a 100% coinsurance basis. We utilize this reinsurance facility primarily for diversification and asset-liability management purposes in connection with this business. The coinsurance agreement is accounted for using the deposit method.

Our senior management has established a current maximum of $4.0 billion for GIC reserves covered under this agreement. As of December 31, 2015 and 2014 the deposit receivable was $155.3 million and $153.5 million, respectively.

Reinsurance Assumed

As of December 31, 2015 and 2014, total reserves assumed from affiliates were $438.7 million and $439.1 million, respectively. For the years ended December 31, 2015, 2014 and 2013, premiums assumed from affiliates were $428.5 million, $407.7 million and $454.9 million, respectively.

Level Premium Term Life Insurance - Stop-loss

Effective January 1, 2012, we entered into a stop-loss agreement with RLI, which was amended and restated April 1, 2012, under which we agreed to indemnify RLI, and RLI agreed to reinsure with us, the aggregate mortality risk under the combined blocks of level premium term life insurance policies issued by RLI between January 1, 2009 and December 31, 2009 and also between January 1, 2012 and December 31, 2012. This coverage included certain level premium term life insurance policies assumed by RLI from RLNY under an Automatic Coinsurance Agreement effective March 1, 2008. Under the terms of the agreement, we will make benefit payments to RLI equal to the amount of claims in excess of the attachment point (equal to a percentage of net reinsurance premium) up to the maximum fully covered benefit. The stop-loss agreement is accounted for using the deposit method. A fee receivable from affiliate of $0.4 million as of December 31, 2015 and 2014 is included in Other liabilities on the Balance Sheets. The fee is accrued and subsequently settled in cash each quarterly accounting period.

Effective July 1, 2012, we entered into a stop-loss agreement with our affiliate, SLD, under which we agree to indemnify SLD, and SLD agrees to reinsure with us, aggregate mortality risk under certain level premium term life insurance policies assumed by SLD from RLI and written by either RLI or RLNY with issue dates between January 1, 2007 and March 31, 2008 and between January 1, 2010 and December 31, 2010. Under the terms of the agreement, we will make benefit payments to SLD equal to the amount of claims in excess of the attachment point (equal to a percentage of net reinsurance premium) up to the maximum fully covered benefit. The stop-loss agreement was accounted for using the deposit method and, effective October 1, 2014, the agreement was terminated.

Group Annual Term - Coinsurance Funds Withheld

Effective December 31, 2008, we entered into a coinsurance funds withheld agreement with RLI for an indefinite duration. Under the terms of the agreement, we assumed 100% quota share of RLI's net retained liability under certain Employee Benefits Group Annual Term policies, including disability waiver of premium.

The initial premium of $219.9 million was equal to the aggregate reserve assumed by us. Thereafter, premiums are equal to the total earned gross premiums collected by RLI from policyholders. RLI will retain all reinsurance premiums payable to us as funds withheld, as security for ceded liabilities and against which ceded losses will be offset. Monthly, we will receive or pay a net settlement. This agreement was amended and restated on October 1, 2010 to better reflect the current investment environment and to modify the treatment of claims under certain policies under which claims are not paid in the form of a single lump sum; the underlying terms described above remained unchanged. (Please see also description of "Waiver of Premium Coinsurance Funds Withheld" agreement between us and SLDI under "Reinsurance Ceded" above). As of December 31, 2015 and 2014, reserves assumed by us under this agreement were $438.7 million and $439.1 million, respectively.

As of December 31, 2015 and 2014, the value of the funds withheld by ceding companies under this agreement was $464.8 million and $467.3 million, respectively, which is included in Deposit and reinsurance recoverable on the Balance Sheets. In addition, as of December 31, 2015 and 2014, we had an embedded derivative under this agreement with a value of $(15.6) million and $9.6 million, respectively.

Separate Accounts

Separate account assets and liabilities generally represent funds maintained to meet specific investment objectives of contract owners or participants who bear the investment risk, subject, in limited cases, to certain minimum guaranteed rates. Investment income and investment gains and losses generally accrue directly to such contract owners. The assets of each account are legally segregated and are not subject to claims that arise out of any other business of the Company.

Separate account assets supporting variable options under variable annuity contracts are invested, as designated by the contract owner or participant under a contract, in shares of mutual funds that are managed by the Company, or in other selected mutual funds not managed by us or our affiliates.

The Company reports separately, as assets and liabilities, investments held in the separate accounts and liabilities of separate accounts if:

- Such separate accounts are legally recognized;
- Assets supporting the contract liabilities are legally insulated from the Company's general account liabilities;
- Investments are directed by the contract owner or participant; and
- All investment performance, net of contract fees and assessments, is passed through to the contract owner.

The Company reports separate account assets that meet the above criteria at fair value on the Balance Sheets based on the fair value of the underlying investments. Separate account liabilities equal separate account assets. Investment income and net realized and unrealized capital gains (losses) of the separate accounts, however, are not reflected in the Statements of Operations, and the Statements of Cash Flows do not reflect investment activity of the separate accounts.

FHLB

We are currently a member of the FHLB of Des Moines and are required to maintain a collateral deposit to back any funding agreements issued by the FHLB. We have the ability to obtain funding from the FHLB based on a percentage of the value of our assets and subject to the availability of eligible collateral. The program capacity is limited to 20% of the total assets of our general and separate accounts. Furthermore, collateral is pledged based on the outstanding balances of the FHLB funding agreement. The amount varies based on type, rating and maturity of the collateral posted to the FHLB. Generally, mortgage securities, commercial real estate and U.S. treasury securities are pledged to the FHLB. Market value fluctuations resulting from changes in interest rates, spreads and other risk factors for each type of assets are monitored and additional collateral is either pledged or released as needed.

Our maximum borrowing capacity under this credit facility was $13.0 billion and $13.4 billion as of December 31, 2015 and 2014, respectively, and does not have an expiration date as long as we maintain a satisfactory level of creditworthiness based on the FHLB credit assessment. As of December 31, 2015 and 2014, we had $950.4 million and $950.1 million, respectively, in non-putable funding agreements, including accrued interest, issued to the FHLB. These non-putable funding agreements are included in Future policy benefits and contract owner account balances on the Balance Sheets. As of December 31, 2015 and 2014, we had assets with a market value of $1.1 billion collateralized the funding agreements to the FHLB.

Ratings

Our access to funding and our related cost of borrowing, requirements for derivatives collateral posting and the attractiveness of certain of our products to customers are affected by our credit ratings and insurance financial strength ratings, which are periodically reviewed by the rating agencies. Financial strength ratings and credit ratings are important factors affecting public confidence in an insurer and its competitive position in marketing products. The credit ratings are also important for the ability to raise capital through the issuance of debt and for the cost of such financing.

A downgrade in our credit or financial strength ratings or the credit or financial strength ratings of our Parent or rated affiliates could potentially, among other things, limit our ability to market products, reduce our competitiveness, increase the number or value of policy surrenders and withdrawals, increase our borrowing costs and potentially make it more difficult to borrow funds, adversely affect the availability of financial guarantees or LOCs, cause additional collateral requirements or other required payments under certain agreements, allow counterparties to terminate derivative agreements and/or impair our relationships with creditors, distributors or trading counterparties thereby potentially negatively affecting our profitability, liquidity and/or capital. In addition, we consider nonperformance risk in determining the fair value of our liabilities. Therefore, changes in our credit or financial strength ratings or the credit or financial strength ratings of our Parent or rated affiliates may affect the fair value of our liabilities.

Financial strength ratings represent the opinions of rating agencies regarding the financial ability of an insurance company to meet its obligations under an insurance policy. Credit ratings represent the opinions of rating agencies regarding an entity's ability to repay its indebtedness. These ratings are not a recommendation to buy or hold any of our securities and they may be revised or revoked at any time at the sole discretion of the rating organization.

Our financial strength and credit ratings as of the date of this Annual Report on Form 10-K are summarized in the following table. In parentheses, following the initial occurrence in the table of each rating, is an indication of that rating's relative rank within the agency's rating categories. That ranking refers only to the generic or major rating category and not to the modifiers appended to the rating by the rating agencies to denote relative position within such generic or major category. For each rating, the relative position of the rating within the relevant rating agency's ratings scale is presented, with "1" representing the highest rating in the scale.

Company	A.M. Best	Fitch	Moody's	S&P
Voya Insurance and Annuity Company				
Financial Strength Rating	A (3 of 16)	A (3 of 9)	A2 (3 of 9)	A (3 of 9)
Short-term Issuer Credit Rating	NR*	NR	WD**	WD

* "NR" indicates not rated.
** "WD" indicates withdrawn.

Rating Agency	Financial Strength Rating Scale
A.M. Best[(1)]	"A++" to "S"
Fitch[(2)]	"AAA" to "C"
Moody's[(3)]	"Aaa" to "C"
S&P[(4)]	"AAA" to "R"

(1) A.M. Best’s financial strength rating is an independent opinion of an insurer's financial strength and ability to meet its ongoing insurance policy and contract obligations. It is based on a comprehensive quantitative and qualitative evaluation of a company's balance sheet strength, operating performance and business profile.
(2) Fitch’s financial strength ratings provide an assessment of the financial strength of an insurance organization. The National Insurer Financial Strength ("IFS") Rating is assigned to the insurance company's policyholder obligations, including assumed reinsurance obligations and contract holder obligations, such as guaranteed investment contracts.
(3) Moody’s financial strength ratings are opinions of the ability of insurance companies to repay punctually senior policyholder claims and obligations. Moody's appends numerical modifiers 1, 2 and 3 to each generic rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category. Moody’s short-term credit ratings are opinions of the ability of issuers to honor short-term financial obligations.
(4) S&P’s insurer financial strength rating is a forward-looking opinion about the financial security characteristics of an insurance organization with respect to its ability to pay under its insurance policies and contracts in accordance with their terms. A "+" or "-" indicates relative strength within a category. An S&P credit rating is an assessment of default risk, but may incorporate an assessment of relative seniority or ultimate recovery in the event of default. Short-term credit ratings reflect the obligor's creditworthiness over a short-term time horizon.

Our ratings by A.M. Best Company, Inc. ("A.M. Best"), Fitch, Moody's and S&P reflect a broader view of how the financial services industry is being challenged by the current economic environment, but also are based on the rating agencies' specific views of our financial strength. In making their ratings decisions, the agencies consider past and expected future capital and earnings, asset quality and risk, profitability and risk of existing liabilities and current products, market share and product distribution capabilities and direct or implied support from parent companies.

Rating agencies use an "outlook" statement for both industry sectors and individual companies. For an industry sector, a stable outlook generally implies that over the next 12 to 18 months the rating agency expects ratings to remain unchanged among companies in the sector. For a particular company, an outlook generally indicates a medium- or long-term trend in credit fundamentals, which if continued, may lead to a rating change.

Ratings actions affirmation and outlook changes by S&P, Moody's, Fitch and A.M. Best from December 31, 2014 through December 31, 2015 and subsequently through the date of this Annual Report on Form 10-K are as follows:

- On September 15, 2015, Fitch affirmed Voya Financial, Inc.'s issuer credit rating and debt ratings. The financial strength ratings of the key operating subsidiaries, including us, were also affirmed. The rating outlook for all ratings is Stable.

- On August 18, 2015, A.M. Best affirmed the ratings of Voya Financial, Inc. and its operating subsidiaries, including us. A.M. Best maintained its stable outlook on the financial strength rating of the key life subsidiaries, including us. A.M. Best also maintained its positive outlook on the issuer credit rating of Voya Financial, Inc. as well as the ratings on the outstanding debt of Voya Financial, Inc.
- On March 16, 2015, Fitch raised the issuer credit ratings on Voya Financial, Inc. to BBB+ from BBB. Fitch also raised the senior unsecured credit ratings of Voya, Financial, Inc. to BBB from BBB- and its junior subordinated debt credit ratings to BB+ from BB. Fitch raised the financial strength ratings of the operating subsidiaries, including us, to A from A-. All ratings were assigned a Stable outlook.
- On March 3, 2015, Moody's raised the issuer credit ratings on Voya Financial, Inc. and Voya Holdings Inc. to Baa2 from Baa3. Moody's also raised the senior unsecured credit ratings of Voya Financial, Inc. to Baa2 from Baa3 and its junior subordinated debt credit ratings to Baa3(hyb) from Ba1(hyb). Moody's raised the financial strength ratings of the operating subsidiaries, including us, to A2 from A3. All ratings were assigned a Stable outlook.
- On February 17, 2015, S&P raised the issuer credit ratings on Voya Financial, Inc. and Voya Holdings Inc. to BBB from BBB-. S&P also raised the senior unsecured credit ratings of Voya Financial, Inc. to BBB from BBB- and its junior subordinated debt credit ratings to BB+ from BB. S&P raised the financial strength ratings of the operating subsidiaries, including us, to A from A-. All ratings were assigned a Stable outlook.

Other Insurance Products

Historically, we provided interest-sensitive, traditional life insurance and health insurance products. All health insurance has been ceded to other insurers and new policies are no longer written. We ceased the issuance of life insurance policies in 2001, and all life insurance business is currently in run-off. A certain portion of the assets held in the general account are dedicated to funding this block of business.

Derivatives

Our use of derivatives is limited mainly to economic hedging to reduce our exposure to cash flow variability of assets and liabilities, interest rate risk, credit risk, exchange rate risk and market risk. It is our policy not to offset amounts recognized for derivative instruments and amounts recognized for the right to reclaim cash collateral or the obligation to return cash collateral arising from derivative instruments executed with the same counterparty under a master netting arrangement.

We enter into interest rate, equity market, credit default and currency contracts, including swaps, futures, forwards, caps, floors and options, to reduce and manage various risks associated with changes in value, yield, price, cash flow, or exchange rates of assets or liabilities held or intended to be held, or to assume or reduce credit exposure associated with a referenced asset, index, or pool. We also utilize options and futures on equity indices to reduce and manage risks associated with our annuity products. Open derivative contracts are reported as Derivatives assets or liabilities on the Balance Sheets at fair value. Changes in the fair value of derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations.

We also have investments in certain fixed maturities and have issued certain annuity products that contain embedded derivatives whose fair value is at least partially determined by levels of or changes in domestic and/or foreign interest rates (short-term or long-term), exchange rates, prepayment rates, equity markets, or credit ratings/spreads. Embedded derivatives within fixed maturities are included with the host contract on the Balance Sheets and changes in fair value of the embedded derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations. Embedded derivatives within certain annuity products are included in Future policy benefits and contract owner account balances on the Balance Sheets and changes in the fair value of the embedded derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations.

In addition, we have entered into coinsurance with funds withheld arrangements that contain embedded derivatives, the fair value of which is based on the change in the fair value of the underlying assets held in trust. Embedded derivatives within coinsurance with funds withheld arrangements are reported with the host contract in Deposits and reinsurance recoverable (assumed reinsurance) or Funds held under reinsurance treaties with affiliates (ceded reinsurance) on the Balance Sheets, and changes in the fair value of the embedded derivatives are recorded in Interest credited and other benefits to contract owners/policyholders in the Statements of Operations.

Deposits and Reinsurance Recoverable

We utilize reinsurance agreements to reduce our exposure to large losses in most aspects of our insurance business. Such reinsurance permits recovery of a portion of losses from reinsurers, although it does not discharge our primary liability as direct insurer of the

risks reinsured. We evaluate the financial strength of potential reinsurers and continually monitor the financial condition of reinsurers. Only those reinsurance recoverable balances deemed probable of recovery are reflected as assets on our Balance Sheets.

Off-Balance Sheet Arrangements and Aggregate Contractual Obligations

Through the normal course of investment operations, we commit to either purchase or sell securities, mortgage loans, or money market instruments, at a specified future date and at a specified price or yield. The inability of counterparties to honor these commitments may result in either a higher or lower replacement cost. Also, there is likely to be a change in the value of the securities underlying the commitments.

As of December 31, 2015 and 2014, the Company had off-balance sheet commitments to acquire mortgage loans of $323.6 and $156.6, respectively, and purchase limited partnerships and private placement investments of $285.9 and $57.5, respectively.

As of December 31, 2015, we had certain contractual obligations due over a period of time as summarized in the following table.

($ in millions)	Payments Due by Period				
Contractual Obligations	**Total**	**Less than 1 Year**	**1-3 Years**	**3-5 Years**	**More than 5 Years**
Purchase obligations[1]	$ 609.5	$ 568.0	$ 41.5	$ -	$ -
Reserves for insurance obligations[2]	33,375.3	3,283.9	5,862.4	5,424.4	18,804.6
Retirement and other plans[3]	22.3	1.8	4.1	4.6	11.8
Long-term debt[4]	956.4	28.3	56.3	56.4	815.4
Operating lease obligations[5]	12.3	7.0	5.3	-	-
Securities lending and repurchase agreements	153.6	153.6	-	-	-
Total[6]	$ 35,129.4	$ 4,042.6	$ 5,969.6	$ 5,485.4	$ 19,631.8

(1) Purchase obligations consist primarily of outstanding commitments under limited partnerships that may occur any time within the terms of the partnership and private loans. The exact timing, however, of funding these commitments related to partnerships and private loans cannot be estimated. Therefore, the total amount of the commitments related to partnerships and private loans is included in the category "Less than 1 Year."

(2) Reserves for insurance obligations consist of amounts required to meet our future obligations for future policy benefits and contract owner account balances. Amounts presented in the table represent estimated cash payments under such contracts, including significant assumptions related to the receipt of future premiums, mortality, morbidity, lapse, renewal, retirement, disability and annuitization comparable with actual experience. These assumptions also include market growth and interest crediting consistent with assumptions used in amortizing DAC. All estimated cash payments are undiscounted for the time value of money.

(3) Includes estimated benefit payments under our non-qualified pension plans, estimated benefit payments under our other postretirement benefit plans and estimated payments of deferred compensation based on participant elections and an average retirement age.

(4) Long-term debt, including interest, consists of the following:

- A surplus note in the principal amount of $35.0 million and the related interest payable with our affiliate, SLD. As of December 31, 2015, the outstanding principal, interest rate and maturity date, of the surplus note were $35.0 million, 7.98% and December 7, 2029, respectively.
- Surplus notes in the aggregate principal amount of $400.0 million and the related interest payable, with our affiliates, Voya Retirement Insurance and Annuity Company, RLI and SLDI. As of December 31, 2015, the aggregate amount of outstanding principal, interest rate and maturity date of these surplus notes were $400.0 million, 6.26% and December 29, 2034, respectively.

(5) Operating lease obligations relate to the rental of office space under various non-cancellable operating lease agreements, the longest term of which expires in 2017.

(6) Unrecognized tax benefits are excluded from the table due to immateriality.

Repurchase Agreements

We engage in dollar repurchase agreements with mortgage-backed securities ("dollar rolls") and repurchase agreements with other collateral types to increase our return on investments and improve liquidity. Such arrangements meet the requirements to be accounted for as financing arrangements. We enter into dollar rolls by selling existing MBS and concurrently entering into an agreement to repurchase similar securities within a short time frame at a lower price. Under repurchase agreements, we borrow cash from a counterparty at an agreed upon interest rate for an agreed upon time frame and pledge collateral in the form of securities. At the end of the agreement, the counterparty returns the collateral to us and we, in turn, repay the loan amount along with the additional agreed upon interest. We require that at all times during the term of the dollar rolls and repurchase agreements that cash or other collateral types obtained is sufficient to allow us to fund substantially all of the cost of purchasing replacement assets. Cash received is invested in Short-term investments, with the offsetting obligation to repay the loan included as an Other liability on the Balance Sheets. We also enter into reverse repurchase agreements. These transactions involve a purchase of securities and an agreement to sell substantially the same securities as those purchased.

The carrying value of the securities pledged in dollar rolls and repurchase agreement transactions and the related repurchase obligation are included in Securities pledged and Short-term debt, respectively, on the Balance Sheets. As of December 31, 2015 and 2014, we did not have any securities pledged in dollar rolls, repurchase agreement transactions or reverse repurchase agreements.

The primary risk associated with short-term collateralized borrowings is that the counterparty will be unable to perform under the terms of the contract. Our exposure is limited to the excess of the net replacement cost of the securities over the value of the short-term investments. We believe the counterparties to the dollar rolls and repurchase agreements are financially responsible and that the counterparty risk is minimal.

Securities Lending

We engage in securities lending whereby certain securities from our portfolio are loaned to other institutions through a lending agent for short periods of time. We have the right to approve any institution with whom the lending agent transacts on our behalf. Initial collateral, primarily cash, is required at a rate of 102% of the market value of the loaned securities. The lending agent retains the cash collateral and invests it in short-term liquid assets on our behalf. The market value of the loaned securities is monitored on a daily basis with additional collateral obtained or refunded as the market value of the loaned securities fluctuates. The lending agent indemnifies us against losses resulting from the failure of a counterparty to return securities pledged where collateral is insufficient to cover the loss. As of December 31, 2015 and 2014, the fair value of loaned securities was $147.9 million and $121.2 million, respectively, and is included in Securities pledged on the Balance Sheets. As of December 31, 2015 and 2014, collateral retained by the lending agent and invested in short-term liquid assets on our behalf was $153.6 million and $125.4 million, respectively, and is recorded in Short-term investments under securities loan agreements, including collateral delivered on the Balance Sheets. As of December 31, 2015 and 2014, liabilities to return collateral of $153.6 million and $125.4 million, respectively, were included in Payables under securities loan agreements, including collateral held, on the Balance Sheets.

Statutory Capital and Risk-Based Capital

Our primary regulator, the State of Iowa Insurance Division (the "Division") recognizes only statutory accounting practices prescribed or permitted by the State of Iowa for determining and reporting the financial condition and results of operations of an insurance company and for determining its solvency under the Iowa Insurance Law. The NAIC Accounting Practices and Procedures Manual has been adopted as a component of prescribed or permitted practices by the State of Iowa.

We are subject to minimum RBC requirements established by the Division. The formulas for determining the amount of RBC specify various weighting factors that are applied to financial balances or various levels of activity based on the perceived degree of risk. Regulatory compliance is determined by a ratio of total adjusted capital ("TAC"), as defined by the NAIC, to authorized control level RBC, as defined by the NAIC. We exceeded the minimum RBC requirements that would require any regulatory or corrective action for all periods presented herein.

We are required to prepare statutory financial statements in accordance with statutory accounting practices prescribed or permitted by the Division. Such statutory accounting practices primarily differ from U.S. GAAP by charging policy acquisition costs to expense as incurred, establishing future policy benefit liabilities and contract owner account balances using different actuarial assumptions as well as valuing investments and certain assets and accounting for deferred taxes on a different basis. Certain assets that are not admitted under statutory accounting principles are charged directly to surplus. Depending on the regulations of the Division, the entire amount or a portion of an insurance company's asset balance can be non-admitted based on the specific rules regarding admissibility. The most significant non-admitted assets are typically deferred tax assets.

The sensitivity of our statutory reserves and surplus established for variable annuity contracts and guaranteed benefit riders to changes in the equity markets will vary depending on the magnitude of the decline. The sensitivity will be affected by the level of account values relative to the level of guaranteed amounts, product design and reinsurance. Statutory reserves for variable annuities depend upon the cumulative equity market impacts on the business in force and therefore result in non-linear relationships with respect to the level of equity market performance within any reporting period.

The statutory reserves and surplus for certain long-dated floating rate GICs are sensitive to changes in forward interest rates. The statutory reserves are based on the present value of the future contract payments, including interest credited, discounted at prescribed statutory rates. Increases in forward interest rates will increase the reserves and decreases in forward interest rates will decrease the reserves.

RBC is also affected by the product mix of the in force book of business (i.e., the amount of business without guarantees is not subject to the same level of reserves as the business with guarantees). RBC is an important factor in the determination of the credit

and financial strength ratings of us. Declines in the market value of our separate account assets can increase the reserves for certain guaranteed benefits, even though we reinsure many of our guaranteed living benefits. Future declines in the market values of our separate account assets could cause future reductions in our surplus, which may also impact RBC.

Further, our statutory credit for reinsurance taken under the reinsurance agreement with SLDI covering our guaranteed living benefits is subject to uncertainty arising from SLDI's ability to provide letters of credit from lending banks under adverse market conditions. We are taking various steps to develop alternative sources of credit for reinsurance collateral.

The Iowa Insurance Division recognizes as capital and surplus those amounts determined in conformity with statutory accounting practices prescribed or permitted by the Division. Our statutory capital and surplus was $2.1 billion as of December 31, 2015 and 2014.

See also "Reinsurance Agreements" above and "Minimum Guarantees" in Item 7A. Quantitative and Qualitative Disclosures About Market Risk.

Contingencies

For information regarding other contingencies related to legal proceedings, regulatory matters and other contingencies involving us, see the *Commitments and Contingencies* Note in our Financial Statements in Part II, Item 8. in this Annual Report on Form 10-K.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk
(Dollar amounts in millions, unless otherwise stated)

Market risk is the risk that our financial position and results of operations will be affected by fluctuations in the value of financial instruments. We have significant holdings in financial instruments and are naturally exposed to a variety of market risks. The main market risks we are exposed to include interest rate risk, equity market price risk and credit risk. We do not have material market risk exposure to "trading" activities in our Financial Statements.

Risk Management

As a financial services company offering immediate and deferred fixed annuities, and with existing blocks of guaranteed investment contracts, variable annuities and other income liabilities, taking measured risks is part of our business. As part of our effort to ensure measured risk taking, we have integrated risk management in our daily business activities and strategic planning.

We place a high priority on risk management and risk control. We have comprehensive risk management and control procedures in place, which are integrated with our affiliates. We have established an integrated risk management function together with our affiliates with responsibility for the formulation of our risk appetite, strategies, policies and limits. The risk management function is also responsible for monitoring our overall market risk exposures and provides review, oversight and support functions on risk-related issues.

Our risk appetite is aligned with how our business is managed and anticipates future regulatory developments. In particular, our risk appetite is aligned with regulatory capital requirements as well as metrics that are aligned with various ratings agency models.

Our risk governance and control systems enable us to identify, control, monitor and aggregate risks and provide assurance that risks are being measured, monitored and reported adequately and effectively. To promote measured risk taking, we have integrated risk management with our business activities and strategic planning.

We have implemented several limit structures to manage risk. Examples include, but are not limited to, the following:

- At-risk limits on sensitivities of earnings and regulatory capital;
- Duration and convexity mismatch limits;
- Credit risk limits;
- Liquidity limits
- Mortality concentration limits
- Catastrophe and mortality exposure retention limits for our insurance risk; and
- Investment and derivative guidelines.

We are also subject to cash flow stress testing pursuant to regulatory requirements. This analysis measures the effect of changes in interest rate assumptions on asset and liability cash flows. The analysis includes the effects of:

- the timing and amount of redemptions and prepayments in our asset portfolio;
- our derivative portfolio;
- death benefits and other claims payable under the terms of our insurance products;
- lapses and surrenders in our insurance products;
- minimum interest guarantees in our insurance products; and
- book value guarantees in our insurance products.

We evaluate any shortfalls that our cash flow testing reveals and if needed increase statutory reserves or adjust portfolio management strategies.

Derivatives are financial instruments whose values are derived from interest rates, foreign currency exchange rates, financial indices, or other prices of securities or commodities. Derivatives include swaps, futures, options and forward contracts. Under U.S. insurance statutes, we may use derivatives to hedge market values or cash flows of assets or liabilities; to replicate cash market instruments; and for certain limited income generating activities. We are generally prohibited from using derivatives for speculative purposes. References below to hedging and hedge programs refer to our process of reducing exposure to various risks. This does not mean that the process necessarily results in hedge accounting treatment for the respective derivative instruments. To qualify for hedge accounting treatment, a derivative must be highly effective in mitigating the designated risk of the hedged item and meet other specific requirements. Effectiveness of the hedge is assessed at inception and throughout the life of the hedging relationship. Even if a derivative qualifies for hedge accounting treatment, there may be an element of ineffectiveness of the hedge. The ineffective portion of a hedging relationship subject to hedge accounting is recognized in Net realized capital gains (losses) in the Statements of Operations.

Market Risk Related to Interest Rates

We define interest rate risk as the risk of an economic loss due to adverse changes in interest rates. This risk arises from our holdings in interest sensitive assets and liabilities, primarily as a result of investing life insurance premiums, fixed annuity and guaranteed investment contract deposits received in interest-sensitive assets and carrying these funds as interest-sensitive liabilities. We are also subject to interest rate risk on our variable annuity business. A sustained decline in interest rates or a prolonged period of low interest rates may subject us to higher cost of guaranteed benefits and increased hedging costs. In a rising interest rate environment, we are exposed to the risk of disintermediation through a potential increase in book value withdrawals from certain annuity products. Conversely, a steady increase in interest rates would tend to improve financial results due to reduced hedging costs, lower costs of guaranteed benefits and improvement to fixed margins.

We use product design, pricing and asset liability management ("ALM") strategies to reduce the adverse effects of interest rate movement. Product design and pricing strategies can include the use of surrender charges, withdrawal restrictions and the ability to reset credited interest rates. ALM strategies can include the use of derivatives and duration and convexity mismatch limits. See "Item 1A. Risk Factors-Risks Related to Our Business-General - The level of interest rates may adversely affect our profitability, particularly in the event of a continuation of the current low interest rate environment or a period of rapidly increasing interest rates."

Derivatives strategies include the following:

- *Interest Risk Related to Variable Annuity Guaranteed Living Benefits*. For Variable Annuity contracts with Guaranteed Living benefits, the contract holder may elect to receive income benefits over the remainder of their lifetime. We use derivatives such as interest rate swaps to hedge a portion of the interest rate risk associated with this type of guarantee.
- *Other Market Value and Cash Flow Hedges*. We also use derivatives in general to hedge present or future changes in cash flows or market value changes in our assets and liabilities. We use derivatives such as interest rate swaps to specifically hedge interest rate risks associated with certain asset classes in our portfolio.

We assess interest rate exposures for financial assets, liabilities and derivatives using hypothetical test scenarios that assume either increasing or decreasing 100 basis point parallel shifts in the yield curve, reflecting changes in either credit spreads or risk-free rates. The following tables summarize the net estimated potential change in fair value from hypothetical 100 basis point upward and downward shifts in interest rates as of December 31, 2015 and 2014. While the test scenarios are for illustrative purposes only and do not reflect our expectations regarding future interest rates or the performance of fixed-income markets, they are a near-term, reasonably possible hypothetical change that illustrates the potential impact of such events. These tests do not measure the

change in value that could result from non-parallel shifts in the yield curve. As a result, the actual change in fair value from a 100 basis point change in interest rates could be different from that indicated by these calculations.

	As of December 31, 2015			
			Hypothetical Change in Fair Value[2]	
($ in millions)	Notional	Fair Value[1]	+ 100 Basis Points Yield Curve Shift	- 100 Basis Points Yield Curve Shift
Financial assets with interest rate risk:				
Fixed maturities, including securities pledged	$ -	$ 23,678.2	$ (1,463.7)	$ 1,585.7
Mortgage loans on real estate	-	3,429.8	(179.8)	196.2
Derivatives:				
Interest rate swaps, caps, forwards	27,452.3	410.0	(527.6)	677.1
Deposits from affiliates	-	156.3	(1.9)	2.0
Embedded derivative on reinsurance	-	(15.6)	(34.3)	39.4
Financial liabilities with interest rate risk:				
Investment contract liabilities:				
Deferred annuities[3]	-	19,367.9	(1,409.6)	1,748.6
Funding agreements with fixed maturities and guaranteed investment contracts	-	1,083.1	(32.9)	34.3
Supplementary contracts, immediate annuities and other	-	1,955.3	(128.2)	143.4
Long-term debt	-	524.7	(66.7)	66.7
Embedded derivative on reinsurance	-	10.2	(436.7)	494.2
Guaranteed benefit derivatives[3]:				
FIA[4]	-	1,779.1	142.7	(143.1)
GMAB/GMWB/GMWBL	-	1,849.0	(703.8)	903.6

[1] Separate account assets and liabilities which are interest sensitive are not included herein as any interest rate risk is borne by the holder of the separate account.
[2] (Decreases) in assets or (decreases) in liabilities are presented in parentheses. Increases in assets or increases in liabilities are presented without parentheses.
[3] Certain amounts included in the Deferred annuities line are also reflected within the Guaranteed benefit derivatives lines of the table above.
[4] As part of our annual unlocking of assumptions, the calculation of the FIA reserve was modified to more closely align projections of future option budgets with projected interest rates. As a result, the FIA reserve will react differently to changes in interest rates such that increases to the interest rates will lead to increases in reserves.

[1] Separate account assets and liabilities which are interest sensitive are not included herein as any interest rate risk is borne by the holder of the separate account.
[2] (Decreases) in assets or (decreases) in liabilities are presented in parentheses. Increases in assets or increases in liabilities are presented without parentheses.
[3] Certain amounts included in the Deferred annuities line are also reflected within the Guaranteed benefit derivatives lines of the table above.

Market Risk Related to Equity Market Prices

Our variable products, fixed indexed annuity ("FIA") products and general account equity securities are significantly influenced by global equity markets. Increases or decreases in equity markets impact certain assets and liabilities related to our variable products and our earnings derived from those products. Our variable products include variable annuity contracts and variable life insurance.

We assess equity risk exposures for financial assets, liabilities and derivatives using hypothetical test scenarios that assume either an increase or decrease of 10% in all equity market benchmark levels. The following tables summarize the net estimated potential change in fair value from an instantaneous increase and decrease in all equity market benchmark levels of 10% as of December 31, 2015 and 2014. In calculating these amounts, we exclude separate account equity securities related to products for which the investment risk is borne primarily by the separate account contract holder rather than by us. While the test scenarios are for illustrative purposes only and do not reflect our expectations regarding the future performance of equity markets, they are near-term, reasonably possible hypothetical changes that illustrate the potential impact of such events. These scenarios consider only the direct effect on fair value of declines in equity benchmark market levels and not changes in asset-based fees recognized as revenue, changes in our estimates of total gross profits used as a basis for amortizing DAC, VOBA and DSI and other costs, or changes in any other assumptions such as market volatility or mortality, utilization or persistency rates in variable contracts that could also impact the fair value of our living benefits features. In addition, these scenarios do not reflect the effect of basis risk, such as potential differences in the performance of the investment funds underlying the variable annuity products relative to the equity market benchmark we use as a basis for developing our hedging strategy. The impact of basis risk could result in larger differences between the change in fair value of the equity-based derivatives and the related living benefit features, in comparison to the hypothetical test scenarios.

Net Amount at Risk ("NAR")

Minimum Guarantees

Variable annuity contracts containing minimum guaranteed death and living benefits expose us to equity risk. A decrease in the equity markets may cause a decrease in the account values, thereby increasing the possibility that we may be required to pay amounts to contract owners due to guaranteed death and living benefits. An increase in the value of the equity markets may increase account values for these contracts, thereby decreasing our risk associated with guaranteed death and living benefits.

We stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010. However, our existing variable annuity block of business contains certain guaranteed death and living benefits made available to contract owners as described below:

Guaranteed Minimum Death Benefits ("GMDB"):

- Standard - Guarantees that, upon death of the individual specified in the policy, the death benefit will be no less than the premiums paid by the contract owner, adjusted for withdrawals.
- Ratchet - Guarantees that, upon death of the individual specified in the policy, the death benefit will be no less than the greater of (1) Standard or (2) the maximum policy anniversary (or quarterly) value of the variable annuity, adjusted for withdrawals.
- Rollup - Guarantees that, upon death of the individual specified in the policy, the death benefit will be no less than the aggregate premiums paid by the contract owner, with interest at the contractual rate per annum, adjusted for withdrawals. The Rollup may be subject to a maximum cap on the total benefit.
- Combo - Guarantees that, upon death of the individual specified in the policy, the death benefit will be no less than the greater of (1) Ratchet or (2) Rollup.

A number of other versions of death benefits were offered previously but sales were discontinued. For contracts issued prior to January 1, 2000, most contracts with enhanced death benefit guarantees were reinsured to third party reinsurers to mitigate the risk produced by such guaranteed death benefits. For contracts issued after December 31, 1999, we instituted a variable annuity guarantee hedge program in lieu of reinsurance. The variable annuity guarantee hedging program is based on us entering into derivative positions to offset exposures to guaranteed minimum death benefits due to adverse changes in the equity markets.

As of the dates indicated, the guaranteed value of these death benefits in excess of account values was estimated to be as follows:

($ in millions)

		December 31, 2015
Net amount at risk, before reinsurance	$	6,458
Net amount at risk, net of reinsurance		6,074

($ in millions)

		December 31, 2014
Net amount at risk, before reinsurance	$	5,392
Net amount at risk, net of reinsurance		4,982

The increase in the guaranteed value of these death benefits was primarily driven by relatively flat equity markets which resulted in unfavorable fund performance net of deductions for fees during the year ended December 31, 2015.

The additional liabilities recognized related to GMDB, as of the periods indicated, were as follows:

($ in millions)

		December 31, 2015
Separate account liability	$	33,321.3
Additional liability balance		517.2

($ in millions)

		December 31, 2014
Separate account liability	$	38,547.7
Additional liability balance		374.3

The above additional liability recorded by us, net of reinsurance, represented the estimated net present value of our future obligation for guaranteed minimum death benefits in excess of account values. The decrease in additional separate account liability and the increase in additional liability balance is mainly due to unfavorable fund performance.

Guaranteed Minimum Living Benefits

Guaranteed Minimum Income Benefit (GMIB). Guarantees a minimum income payout, exercisable only on a contract anniversary on or after a specified date, in most cases 10 years after purchase of the GMIB rider. The income payout is determined based on contractually established annuity factors multiplied by the benefit base. The benefit base equals the premium paid at the time of product issue and may increase over time based on a number of factors, including a rollup percentage (mainly 7% or 6% depending on the version of the benefit) and ratchet frequency subject to maximum caps which vary by product version (200%, 250% or 300% of initial premium).

Guaranteed Minimum Withdrawal Benefit and Guaranteed Minimum Withdrawal Benefit for Life (GMWB/GMWBL). Guarantees an annual withdrawal amount for a specified period of time (GMWB) or life (GMWBL) that is calculated as a percentage of the benefit base that equals the premium paid at the time of product issue and may increase over time based on a number of factors, including a rollup percentage (mainly 7%, 6% or 0%, depending on versions of the benefit) and ratchet frequency (primarily annually or quarterly, depending on versions). The percentage used to determine the guaranteed annual withdrawal amount may vary by age at first withdrawal and depends on versions of the benefit. A joint life-time withdrawal benefit option was available to include coverage for spouses. Most versions of the withdrawal benefit included reset and/or step-up features that may increase the guaranteed withdrawal amount in certain conditions. Earlier versions of the withdrawal benefit guarantee that annual withdrawals of up to 7.0% of eligible premiums may be made until eligible premiums previously paid by the contract owner are returned, regardless of account value performance. Asset allocation requirements apply at all times where withdrawals are guaranteed for life.

Guaranteed Minimum Accumulation Benefit (GMAB). Guarantees that the account value will be at least 100% of the eligible premiums paid by the customer after 10 years, adjusted for withdrawals. We offered an alternative design that guaranteed the account value to be at least 200% of the eligible premiums paid by contract owners after 20 years.

We reinsured most of our living benefit guarantee riders to SLDI to mitigate the risk produced by such benefits. This reinsurance agreement covers all of the GMIBs, as well as the GMWBs with lifetime guarantees (the "Reinsured living benefits"). The GMABs and the GMWBs without lifetime guarantees (the "Non-reinsured living benefits") are not covered by this reinsurance. The Non-reinsured living benefits are still covered by our variable annuity guarantee hedging program.

The following guaranteed living benefits information is as of the dates indicated:

($ in millions)	Non-reinsured Living Benefits (GMAB/GMWB)	Reinsured Living Benefits (GMIB/GMWBL)
	December 31, 2015	
Net amount at risk, before reinsurance	$ 17	$ 5,087
Net amount at risk, net of reinsurance	17	-
($ in millions)	**December 31, 2014**	
Net amount at risk, before reinsurance	$ 15	$ 3,645
Net amount at risk, net of reinsurance	15	-

The net amount at risk for the reinsured living benefits is equal to the excess of the present value of the minimum guaranteed annuity payments available to the contractholder over the current account value. The methodology used to calculate the net amount at risk partially reflects the current interest rate environment and also includes a provision for the expected mortality of the clients covered by these living benefits. The increase in the net amount at risk of these living benefits (GMIB/GMWBL) from December 31, 2014 to December 31, 2015 was primarily driven by lower equity markets.

The net amount at risk for the non-reinsured living benefits is equal to the guaranteed value of these benefits in excess of the account values, which is reflected in the table above.

The separate account liabilities subject to the requirements for additional reserve liabilities under ASC Topic 944 for minimum guaranteed benefits and the additional liabilities recognized related to minimum guarantees, by type, as of the dates indicated, were as follows:

($ in millions)	Non-reinsured Living Benefits (GMAB/GMWB)	Reinsured Living Benefits (GMIB/GMWBL)
	December 31, 2015	
Separate account liability	$ 593.5	$ 25,149.5
Additional liability balance, net of reinsurance	29.1	1,246.0
	December 31, 2014	
Separate account liability	$ 728.9	$ 29,062.8
Additional liability balance, net of reinsurance	32.8	1,045.5

As of December 31, 2015 and 2014, the above additional liabilities for non-reinsured living benefits recorded by us, net of reinsurance, represent the estimated net present value of our future obligations for these benefits. The above additional liabilities for reinsured living benefits recorded by us, net of reinsurance, represent the present value of future claims less the present value of future attributed fees (GMWBLs) or the benefits ratio approach (GMIBs), less the reinsurance ceded reserve calculated under Accounting Standards Codification Topic 944. The additional liability for GMIBs was zero. The increase in the additional liability balance for reinsured living benefits corresponds to the increase in the GMWBL liability, which increased mainly due to decrease in the equity markets during the year ended December 31, 2015.

Variable Annuity Hedge Program

Variable Annuity Guarantee Hedge Program

We primarily mitigate variable annuity market risk exposures through hedging. Market risk arises primarily from the minimum guarantees within the variable annuity products, whose economic costs are primarily dependent on future equity market returns, interest rate levels, equity volatility levels and policyholder behavior. The Variable Annuity Guarantee Hedge Program is used to mitigate our exposure to equity market and interest rate changes and seeks to ensure that the required assets are available to satisfy future death benefit and living benefit obligations. While the Variable Annuity Guarantee Hedge Program does not explicitly hedge statutory or U.S. GAAP reserves, as markets move up or down, in aggregate the returns generated by the Variable Annuity Guarantee Hedge Program will significantly offset the statutory and U.S. GAAP reserve changes due to market movements.

The objective of the Variable Annuity Guarantee Hedge Program is to offset changes in equity market returns for most minimum guaranteed death benefits and all guaranteed living benefits, while also providing interest rate protection for certain minimum guaranteed living benefits. We hedge the equity market exposure using a hedge target set using market consistent valuation techniques for all guaranteed living benefits and most death benefits. We also hedge a portion of the interest rate risk in our GMWB/GMAB/GMWBL blocks using a market consistent valuation hedge target. The Variable Annuity Guarantee Hedge Program does not hedge interest rate risks for our GMIB or GMDB. However, interest rate risk is fully hedged to our targets with inclusion of the Variable Annuity Capital Hedge Overlay ("CHO") Program, which is discussed below. These hedge targets may change over time with market movements, changes in regulatory and rating agency capital, available collateral and our risk tolerance.

Equity index futures on various equity indices are used to mitigate the risk of the change in value of the policyholder-directed separate account funds underlying the variable annuity contracts with minimum guarantees. A dynamic trading program is utilized to seek replication of the performance of targeted fund groups (i.e., the fund groups that can be covered by indices where liquid futures markets exist).

Total return swaps are also used to mitigate the risk of the change in value of certain policyholder directed separate account funds. These include fund classes such as emerging markets and real estate. They may also be used instead of futures of more liquid indices where it may be deemed advantageous. This hedging strategy is employed at our discretion based on current risk exposures and related transaction costs.

Interest rate swaps are used to match a portion of the hedge targets on GMWB/GMAB/GMWBL as described above.

Variance swaps and equity options were used to mitigate the impact of changes in equity volatility on the economic liabilities associated with certain minimum guaranteed living benefits. In the second quarter of 2015, we chose to cease this program because of the limited benefit of it covering a small block of business.

Foreign exchange forwards are used to mitigate the impact of policyholder-directed investments in international funds with exposure to fluctuations in exchange rates of certain foreign currencies. Rebalancing is performed based on pre-determined notional exposures to the specific currencies.

Variable Annuity CHO Program

Variable annuity guaranteed benefits are hedged based on their economic or fair value; however, the statutory reserves and rating agency required assets are not based on a market value. When equity markets decrease, the statutory reserve and rating agency required assets for the variable annuity guaranteed benefits can increase more quickly than the value of the derivatives held under the Variable Annuity Guarantee Hedge Program. This causes regulatory reserves to increase and rating agency capital to decrease. The CHO program is intended to mitigate market risk to the regulatory and rating agency capital of the Company. The hedge is executed through the purchase and sale of equity index derivatives, variance and credit default swaps, and is designed to limit the uncovered reserve and rating agency capital increases and certain rebalancing costs in an immediate down equity market, credit spread widening or increased volatility scenario to an amount we believe prudent for a company of our size and scale. This amount will change over time with market movements, changes in regulatory and rating agency capital, available collateral and our risk tolerance.

The primary focus of the hedge program is to protect regulatory and rating agency capital from equity market movements. Hedge ineffectiveness, along with other aspects not directly hedged (including unexpected policyholder behavior), may cause losses of regulatory or rating agency capital. Regulatory and rating agency capital requirements may move disproportionately (i.e., they may change by different amounts as market conditions and other factors change), and, therefore, could also cause our hedge program to not realize its key objective of protecting both regulatory and rating agency capital from equity market movements.

Hedging of FIA Benefits

We mitigate FIA market risk exposures through a combination of capital market hedging and product design. For FIAs, these risks stem from the minimum guaranteed contract value offered and the additional interest credits (Equity Participation or Interest Rate Participation) based on exposure to various stock market indices or the interest rate benchmark. The minimum guarantees, interest rate and equity market exposures, are strongly dependent on capital markets and, to a lesser degree, policyholder behavior.

These hedge programs are limited to the current policy term of the liabilities, based on current participation rates. Future returns, which may be reflected in FIA credited rates beyond the current policy term, are not hedged.

Call options and futures contracts are used to hedge against an increase in various equity indices. An increase in various equity indices may result in increased payments to contract holders of FIA contracts. The call options and futures contracts offset this increased expense.

Interest rate swaptions are used to hedge against an increase in the interest rate benchmark. An increase in the interest rate benchmark may result in increased payments to contract holders of FIA contracts. The interest rate swaptions offset this increased expense.

Market Risk Related to Credit Risk

Credit risk is primarily embedded in the general account portfolio. The carrying value of our fixed maturity, including securities pledged, and equity portfolio totaled $23.7 billion and $23.3 billion as of December 31, 2015 and 2014, respectively. Our credit risk materializes primarily as impairment losses and/or credit risk related trading losses. We are exposed to occasional cyclical economic downturns, during which impairment losses may be significantly higher than the long-term historical average. This is offset by years where we expect the actual impairment losses to be substantially lower than the long-term average.

Credit risk in the portfolio can also materialize as increased capital requirements caused by rating down-grades. The effect of rating migration on our capital requirements is also dependent on the economic cycle and increased asset impairment levels may go hand in hand with increased asset related capital requirements.

We manage the risk of default and rating migration by applying disciplined credit evaluation and underwriting standards and prudently limiting allocations to lower quality, higher risk investments. In addition, we diversify our exposure by issuer and

country, using rating based issuer and country limits, as well as by industry segment, using specific investment constraints. Limit compliance is monitored on a daily, monthly, or quarterly basis. Limit violations are reported to senior management and we are actively involved in decisions around curing such limit violations.

We also have credit risk related to the ability of our derivatives counterparties to honor their obligations to pay the contract amounts under various agreements. In order to minimize the risk of credit loss on such contracts, we diversify our exposures among several counterparties and limit the amount of exposure to each based on credit rating. For most counterparties, we have collateral agreements in place that would substantially limit our credit losses in case of a counterparty default. We also generally limit our selection of counterparties that we do new transactions with to those with an "A-" credit rating or above. When exceptions are made to that principle, we ensure that we obtain collateral to mitigate our risk of loss. For derivatives counterparty risk exposures (which includes reverse repurchase and securities lending transactions), we measure and monitor our risks on a market value basis daily.

Report of Independent Registered Public Accounting Firm

The Board of Directors
Voya Insurance and Annuity Company

We have audited the accompanying balance sheets of Voya Insurance and Annuity Company as of December 31, 2015 and 2014, and the related statements of operations, comprehensive income, changes in shareholder's equity, and cash flows for each of the three years in the period ended December 31, 2015. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. We were not engaged to perform an audit of the Company's internal control over financial reporting. Our audits include consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Voya Insurance and Annuity Company at December 31, 2015 and 2014, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2015, in conformity with U.S. generally accepted accounting principles.

The accompanying notes are an integral part of these Financial Statements.

1. Business, Basis of Presentation and Significant Accounting Policies

Business

Voya Insurance and Annuity Company ("VIAC" or "the Company") is a stock life insurance company domiciled in the State of Iowa and provides financial products and services in the United States. VIAC is authorized to conduct its insurance business in all states, except New York, and in the District of Columbia.

Prior to May 2013, Voya Financial, Inc., together with its subsidiaries, including the Company was an indirect, wholly owned subsidiary of ING Groep N.V. ("ING Group" or "ING"), a global financial services holding company based in The Netherlands, with American Depository Shares listed on the New York Stock Exchange. In 2009, ING Group announced the anticipated separation of its global banking and insurance businesses, including the divestiture of Voya Financial, Inc., together with its subsidiaries, including the Company. On April 11, 2013, Voya Financial, Inc. announced plans to rebrand as Voya Financial. On May 2, 2013, the common stock of Voya Financial, Inc. began trading on the New York Stock Exchange under the symbol "VOYA." On May 7, 2013 and May 31, 2013, Voya Financial, Inc. completed its initial public offering of common stock, including the issuance and sale by Voya Financial, Inc. of 30,769,230 shares of common stock and the sale by ING Insurance International B.V. ("ING International"), an indirect wholly owned subsidiary of ING Group and previously the sole stockholder of Voya Financial, Inc., of 44,201,773 shares of outstanding common stock of Voya Financial, Inc. (collectively, "the IPO"). On September 30, 2013, ING International transferred all of its shares of Voya Financial, Inc. common stock to ING Group.

On October 29, 2013, ING Group completed a sale of 37,950,000 shares of common stock of Voya Financial, Inc. in a registered public offering ("Secondary Offering"), reducing ING Group's ownership of Voya Financial, Inc. to 57%.

Throughout 2014, ING Group completed the sale of an aggregate of 82,783,006 shares of common stock of Voya Financial, Inc. in a series of registered public offerings. Also during 2014, pursuant to the terms of share repurchase agreements between ING Group and Voya Financial, Inc., Voya Financial, Inc. acquired 19,447,847 shares of its common stock from ING Group. As of the end of 2014, ING Group's ownership of Voya Financial, Inc. had been reduced to approximately 19%.

In March of 2015, ING Group completed a sale of 32,018,100 shares of common stock of Voya Financial, Inc. in a registered public offering. Concurrently with this offering, pursuant to the terms of a share repurchase agreement between ING Group and Voya Financial, Inc., Voya Financial, Inc. acquired 13,599,274 shares of its common stock from ING Group.

As a result of these transactions, ING Group satisfied the provisions of its agreement with the European Union regarding the divestment of its U.S. insurance and investment operations, which required ING Group to divest 100% of its ownership interest in Voya Financial, Inc. together with its subsidiaries, including the Company by the end of 2016. ING Group continues to hold warrants to purchase up to 26,050,846 shares of Voya Financial, Inc. common stock at an exercise price of $48.75, in each case subject to adjustments.

VIAC is a direct, wholly owned subsidiary of Voya Holdings Inc. ("Parent"), which is a direct, wholly owned subsidiary of Voya Financial, Inc.

The Company offers various insurance products, including fixed and indexed annuities, investment-only products and payout annuities for pre-retirement wealth accumulation and postretirement income management. The Company's annuity products are distributed by national and regional brokerage and securities firms, independent broker-dealers, banks, life insurance companies with captive agency sales forces, independent insurance agents, independent marketing organizations and affiliated broker-dealers. The Company's primary annuity customers are individual consumers. The Company stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010, as part of a global business strategy and risk reduction plan. New amounts will continue to be deposited in VIAC variable annuities as add-on premiums to existing contracts.

The Company has historically issued guaranteed investment contracts and funding agreements (collectively referred to as "GICs"), primarily to institutional investors and corporate benefit plans. In 2009, the Company made a strategic decision to run-off the assets and liabilities in the GIC business over time. New GIC contracts may be issued on a limited basis to replace maturing contracts.

The Company has one operating segment.

Basis of Presentation

The accompanying Financial Statements of the Company have been prepared in accordance with accounting principles generally accepted in the United States ("U.S. GAAP").

Certain immaterial reclassifications have been made to prior year financial information to conform to the current year classifications.

Significant Accounting Policies

Estimates and Assumptions

The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the Financial Statements and the reported amounts of revenues and expenses during the reporting period. Those estimates are inherently subject to change and actual results could differ from those estimates.

The Company has identified the following accounts and policies as the most significant in that they involve a higher degree of judgment, are subject to a significant degree of variability and/or contain significant accounting estimates:

- Reserves for future policy benefits;
- Deferred policy acquisition costs ("DAC"), value of business acquired ("VOBA") and deferred sales inducements ("DSI");
- Valuation of investments and derivatives;
- Impairments;
- Income taxes; and
- Contingencies.

Fair Value Measurement

The Company measures the fair value of its financial assets and liabilities based on assumptions used by market participants in pricing the asset or liability, which may include inherent risk, restrictions on the sale or use of an asset, or nonperformance risk, including the Company's own credit risk. The estimate of fair value is the price that would be received to sell an asset or transfer a liability ("exit price") in an orderly transaction between market participants in the principal market, or the most advantageous market in the absence of a principal market, for that asset or liability. The Company uses a number of valuation sources to determine the fair values of its financial assets and liabilities, including quoted market prices, third-party commercial pricing services, third-party brokers, industry-standard, vendor-provided software that models the value based on market observable inputs, and other internal modeling techniques based on projected cash flows.

Investments

The accounting policies for the Company's principal investments are as follows:

Fixed Maturities and Equity Securities: The Company's fixed maturities and equity securities are currently designated as available-for-sale, except those accounted for using the fair value option ("FVO"). Available-for-sale securities are reported at fair value and unrealized capital gains (losses) on these securities are recorded directly in Accumulated other comprehensive income (loss) ("AOCI") and presented net of related changes in DAC, VOBA, DSI and Deferred income taxes. In addition, certain fixed maturities have embedded derivatives, which are reported with the host contract on the Balance Sheets.

The Company has elected the FVO for certain of its fixed maturities to better match the measurement of assets and liabilities in the Statements of Operations. Certain collateralized mortgage obligations ("CMOs"), primarily interest-only and principal-only strips, are accounted for as hybrid instruments and valued at fair value with changes in the fair value recorded in Other net realized capital gains (losses) in the Statements of Operations.

Purchases and sales of fixed maturities and equity securities, excluding private placements, are recorded on the trade date. Purchases and sales of private placements and mortgage loans are recorded on the closing date. Investment gains and losses on sales of securities are generally determined on a first-in-first-out ("FIFO") basis.

Interest income on fixed maturities is recorded when earned using an effective yield method, giving effect to amortization of premiums and accretion of discounts. Dividends on equity securities are recorded when declared. Such dividends and interest income are recorded in Net investment income in the Statements of Operations.

Included within fixed maturities are loan-backed securities, including residential mortgage-backed securities ("RMBS"), commercial mortgage-backed securities ("CMBS") and asset-backed securities ("ABS"). Amortization of the premium or discount from the purchase of these securities considers the estimated timing and amount of prepayments of the underlying loans. Actual prepayment experience is periodically reviewed and effective yields are recalculated when differences arise between the prepayments originally anticipated and the actual prepayments received and currently anticipated. Prepayment assumptions for single-class and multi-class mortgage-backed securities ("MBS") and ABS are estimated by management using inputs obtained from third-party specialists, including broker-dealers, and based on management's knowledge of the current market. For prepayment-sensitive securities such as interest-only and principal-only strips, inverse floaters and credit-sensitive MBS and ABS securities, which represent beneficial interests in securitized financial assets that are not of high credit quality or that have been credit impaired, the effective yield is recalculated on a prospective basis. For all other MBS and ABS, the effective yield is recalculated on a retrospective basis.

Short-term Investments: Short-term investments include investments with remaining maturities of one year or less, but greater than three months, at the time of purchase. These investments are stated at fair value.

Assets Held in Separate Accounts: Assets held in separate accounts are reported at the fair values of the underlying investments in the separate accounts. The underlying investments include mutual funds, short-term investments, cash and fixed maturities.

Mortgage Loans on Real Estate: The Company's mortgage loans on real estate are all commercial mortgage loans, which are reported at amortized cost, less impairment write-downs and allowance for losses. If a mortgage loan is determined to be impaired (i.e., when it is probable that the Company will be unable to collect all amounts due according to the contractual terms of the loan agreement), the carrying value of the mortgage loan is reduced to the lower of either the present value of expected cash flows from the loan, discounted at the loan's original purchase yield, or fair value of the collateral. For those mortgages that are determined to require foreclosure, the carrying value is reduced to the fair value of the underlying collateral, net of estimated costs to obtain and sell at the point of foreclosure. The carrying value of the impaired loans is reduced by establishing a permanent write-down recorded in Other net realized capital gains (losses) in the Statements of Operations. Property obtained from foreclosed mortgage loans is recorded in Other investments on the Balance Sheets.

Mortgage loans are evaluated by the Company's investment professionals, including an appraisal of loan-specific credit quality, property characteristics and market trends. Loan performance is continuously monitored on a loan-specific basis throughout the year. The Company's review includes submitted appraisals, operating statements, rent revenues and annual inspection reports, among other items. This review evaluates whether the properties are performing at a consistent and acceptable level to secure the debt.

Mortgages are rated for the purpose of quantifying the level of risk. Those loans with higher risk are placed on a watch list and are closely monitored for collateral deficiency or other credit events that may lead to a potential loss of principal or interest. The Company defines delinquent mortgage loans consistent with industry practice as 60 days past due.

Commercial loans are placed on non-accrual status when 90 days in arrears if the Company has concerns regarding the collectability of future payments, or if a loan has matured without being paid off or extended. Factors considered may include conversations with the borrower, loss of major tenant, bankruptcy of borrower or major tenant, decreased property cash flow, number of days past due, or various other circumstances. Based on an assessment as to the collectability of the principal, a determination is made either to apply against the book value or apply according to the contractual terms of the loan. Funds recovered in excess of book value would then be applied to recover expenses, impairments, and then interest. Accrual of interest resumes after factors resulting in doubts about collectability have improved.

The Company records an allowance for probable losses incurred on non-impaired loans on an aggregate basis, rather than specifically identified probable losses incurred by individual loan.

Policy Loans: Policy loans are carried at an amount equal to the unpaid balance. Interest income on such loans is recorded as earned in Net investment income using the contractually agreed upon interest rate. Generally, interest is capitalized on the policy's anniversary date. Valuation allowances are not established for policy loans, as these loans are collateralized by the cash surrender value of the associated insurance contracts. Any unpaid principal or interest on the loan is deducted from the account value or the death benefit prior to settlement of the policy.

Limited Partnerships/Corporations: The Company uses the equity method of accounting for investments in limited partnership interests, which consists primarily of private equities and hedge funds. Generally, the Company records its share of earnings using a lag methodology, relying on the most recent financial information available, generally not to exceed three months. The Company's earnings from limited partnership interests accounted for under the equity method are recorded in Net investment income.

Other Investments: Other investments are comprised primarily of Federal Home Loan Bank ("FHLB") stock and property obtained from foreclosed mortgage loans, as well as other miscellaneous investments. The Company is a member of the FHLB system and is required to own a certain amount of FHLB stock based on the level of borrowings and other factors. FHLB stock is carried at cost, classified as a restricted security and periodically evaluated for impairment based on ultimate recovery of par value.

Securities Lending: The Company engages in securities lending whereby certain securities from its portfolio are loaned to other institutions, through a lending agent, for short periods of time. The Company has the right to approve any institution with whom the lending agent transacts on its behalf. Initial collateral, primarily cash, is required at a rate of 102% of the market value of the loaned securities. The lending agent retains the cash collateral and invests it in short-term liquid assets on behalf of the Company. The market value of the loaned securities is monitored on a daily basis with additional collateral obtained or refunded as the market value of the loaned securities fluctuates. The lending agent indemnifies the Company against losses resulting from the failure of a counterparty to return securities pledged where collateral is insufficient to cover the loss.

Impairments

The Company evaluates its available-for-sale general account investments quarterly to determine whether there has been an other-than-temporary decline in fair value below the amortized cost basis.This evaluation process entails considerable judgment and estimation. Factors considered in this analysis include, but are not limited to, the length of time and the extent to which the fair value has been less than amortized cost, the issuer's financial condition and near-term prospects, future economic conditions and market forecasts, interest rate changes and changes in ratings of the security. An extended and severe unrealized loss position on a fixed maturity may not have any impact on: (a) the ability of the issuer to service all scheduled interest and principal payments and (b) the evaluation of recoverability of all contractual cash flows or the ability to recover an amount at least equal to its amortized cost based on the present value of the expected future cash flows to be collected. In contrast, for certain equity securities, the Company gives greater weight and consideration to a decline in market value and the likelihood such market value decline will recover.

When assessing the Company's intent to sell a security or if it is more likely than not, it will be required to sell a security before recovery of its amortized cost basis, management evaluates facts and circumstances such as, but not limited to, decisions to rebalance the investment portfolio and sales of investments to meet cash flow or capital needs.

When the Company has determined it has the intent to sell or if it is more likely than not that the Company will be required to sell a security before recovery of its amortized cost basis and the fair value has declined below amortized cost ("intent impairment"), the individual security is written down from amortized cost to fair value, and a corresponding charge is recorded in Net realized capital gains (losses) in the Statements of Operations as an other-than-temporary impairment ("OTTI"). If the Company does not intend to sell the security and it is not more likely than not that the Company will be required to sell the security before recovery of its amortized cost basis, but the Company has determined that there has been an other-than-temporary decline in fair value below the amortized cost basis, the OTTI is bifurcated into the amount representing the present value of the decrease in cash flows expected to be collected ("credit impairment") and the amount related to other factors ("noncredit impairment"). The credit impairment is recorded in Net realized capital gains (losses) in the Statements of Operations. The noncredit impairment is recorded in Other comprehensive income (loss).

The Company uses the following methodology and significant inputs to determine the amount of the OTTI credit loss:

- When determining collectability and the period over which the value is expected to recover for U.S. and foreign corporate securities, foreign government securities and state and political subdivision securities, the Company applies the same considerations utilized in its overall impairment evaluation process, which incorporates information regarding the specific security, the industry and geographic area in which the issuer operates and overall macroeconomic conditions. Projected future cash flows are estimated using assumptions derived from the Company's best estimates of likely scenario-based outcomes, after giving consideration to a variety of variables that includes, but is not limited to: general payment terms of the security; the likelihood that the issuer can service the scheduled interest and principal payments; the quality and amount of any credit enhancements; the security's position within the capital structure of the issuer; possible corporate restructurings or asset sales by the issuer; and changes to the rating of the security or the issuer by rating agencies.
- Additional considerations are made when assessing the unique features that apply to certain structured securities, such as subprime, Alt-A, non-agency RMBS, CMBS and ABS. These additional factors for structured securities include, but are not limited to: the quality of underlying collateral; expected prepayment speeds; loan-to-value ratios; debt service coverage ratios; current and forecasted loss severity; consideration of the payment terms of the underlying assets backing a particular security; and the payment priority within the tranche structure of the security.
- When determining the amount of the credit loss for U.S. and foreign corporate securities, foreign government securities and state and political subdivision securities, the Company considers the estimated fair value as the recovery value when available information does not indicate that another value is more appropriate. When information is identified that indicates a recovery value other than estimated fair value, the Company considers in the determination of recovery value the same considerations utilized in its overall impairment evaluation process, which incorporates available information and the Company's best estimate of scenario-based outcomes regarding the specific security and issuer; possible corporate restructurings or asset sales by the issuer; the quality and amount of any credit enhancements; the security's position within the capital structure of the issuer; fundamentals of the industry and geographic area in which the security issuer operates; and the overall macroeconomic conditions.
- The Company performs a discounted cash flow analysis comparing the current amortized cost of a security to the present value of future cash flows expected to be received, including estimated defaults and prepayments. The discount rate is generally the effective interest rate of the fixed maturity prior to impairment.

In periods subsequent to the recognition of the credit related impairment components of OTTI on a fixed maturity, the Company accounts for the impaired security as if it had been purchased on the measurement date of the impairment. Accordingly, the discount (or reduced premium) based on the new cost basis is accreted into Net investment income over the remaining term of the fixed maturity in a prospective manner based on the amount and timing of estimated future cash flows.

Derivatives

The Company's use of derivatives is limited mainly to economic hedging to reduce the Company's exposure to cash flow variability of assets and liabilities, interest rate risk, credit risk, exchange rate risk and market risk. It is the Company's policy not to offset amounts recognized for derivative instruments and amounts recognized for the right to reclaim cash collateral or the obligation to return cash collateral arising from derivative instruments executed with the same counterparty under a master netting arrangement.

The Company enters into interest rate, equity market, credit default and currency contracts, including swaps, futures, forwards, caps, floors and options, to reduce and manage various risks associated with changes in value, yield, price, cash flow or exchange rates of assets or liabilities held or intended to be held, or to assume or reduce credit exposure associated with a referenced asset, index or pool. The Company also utilizes options and futures on equity indices to reduce and manage risks associated with its annuity products. Derivative contracts are reported as Derivatives assets or liabilities on the Balance Sheets at fair value. Changes in the fair value of derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations.

To qualify for hedge accounting, at the inception of the hedging relationship, the Company formally documents its risk management objective and strategy for undertaking the hedging transaction, as well as its designation of the hedge as either (a) a hedge of the exposure to changes in the estimated fair value of a recognized asset or liability or an identified portion thereof that is attributable to a particular risk ("fair value hedge") or (b) a hedge of a forecasted transaction or of the variability of cash flows that is attributable to interest rate risk to be received or paid related to a recognized asset or liability ("cash flow hedge"). In this documentation, the Company sets forth how the hedging instrument is expected to hedge the designated risks related to the hedged item and sets forth the method

that will be used to retrospectively and prospectively assess the hedging instrument's effectiveness and the method that will be used to measure ineffectiveness. A derivative designated as a hedging instrument must be assessed as being highly effective in offsetting the designated risk of the hedged item. Hedge effectiveness is formally assessed at inception and periodically throughout the life of the designated hedging relationship.

- *Fair Value Hedge*: For derivative instruments that are designated and qualify as a fair value hedge, the gain or loss on the derivative instrument, as well as the hedged item, to the extent of the risk being hedged, are recognized in Other net realized capital gains (losses) in the Statements of Operations.
- *Cash Flow Hedge*: For derivative instruments that are designated and qualify as a cash flow hedge, the effective portion of the gain or loss on the derivative instrument is reported as a component of AOCI and reclassified into earnings in the same periods during which the hedged transaction impacts earnings in the same line item associated with the forecasted transaction. The ineffective portion of the derivative's change in value, if any, along with any of the derivative's change in value that is excluded from the assessment of hedge effectiveness, are recorded in Other net realized capital gains (losses) in the Statements of Operations.

When hedge accounting is discontinued because it is determined that the derivative is no longer expected to be highly effective in offsetting changes in the estimated fair value or cash flows of a hedged item, the derivative continues to be carried on the Balance Sheets at its estimated fair value, with subsequent changes in estimated fair value recognized currently in Other net realized capital gains (losses). The carrying value of the hedged asset or liability under a fair value hedge is no longer adjusted for changes in its estimated fair value due to the hedged risk, and the cumulative adjustment to its carrying value is amortized into income over the remaining life of the hedged item. Provided the hedged forecasted transaction is still probable of occurrence, the changes in estimated fair value of derivatives recorded in Other comprehensive income (loss) related to discontinued cash flow hedges are released into the Statements of Operations when the Company's earnings are affected by the variability in cash flows of the hedged item.

When hedge accounting is discontinued because it is no longer probable that the forecasted transactions will occur on the anticipated date or within two months of that date, the derivative continues to be carried on the Balance Sheets at its estimated fair value, with changes in estimated fair value recognized currently in Other net realized capital gains (losses). Derivative gains and losses recorded in Other comprehensive income (loss) pursuant to the discontinued cash flow hedge of a forecasted transaction that is no longer probable are recognized immediately in Other net realized capital gains (losses).

The Company also has investments in certain fixed maturities and has issued certain annuity products that contain embedded derivatives whose fair value is at least partially determined by levels of or changes in domestic and/or foreign interest rates (short-term or long-term), exchange rates, prepayment rates, equity markets or credit ratings/spreads. Embedded derivatives within fixed maturities are included with the host contract on the Balance Sheets, and changes in the fair value of the embedded derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations. Embedded derivatives within certain annuity products are included in Future policy benefits and contract owner account balances on the Balance Sheets, and changes in the fair value of the embedded derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations.

In addition, the Company has entered into coinsurance with funds withheld reinsurance arrangements that contain embedded derivatives, the fair value of which is based on the change in the fair value of the underlying assets held in trust. The embedded derivatives within coinsurance with funds withheld arrangements are reported with the host contract in Deposits and reinsurance recoverable or Funds held under reinsurance treaties with affiliates on the Balance Sheets, and changes in the fair value of the embedded derivatives are recorded in Interest credited and other benefits to contract owners/policyholders in the Statements of Operations.

Cash and Cash Equivalents

Cash and cash equivalents include cash on hand, amounts due from banks and other highly liquid investments, such as money market instruments and debt instruments with maturities of three months or less at the time of purchase. Cash and cash equivalents are stated at fair value.

Deferred Policy Acquisition Costs, Value of Business Acquired and Deferred Sales Inducements

DAC represents policy acquisition costs that have been capitalized and are subject to amortization and interest. Capitalized costs are incremental, direct costs of contract acquisition and certain other costs related directly to successful acquisition activities. Such costs

consist principally of commissions, underwriting, sales and contract issuance and processing expenses directly related to the successful acquisition of new and renewal business. Indirect or unsuccessful acquisition costs, maintenance, product development and overhead expenses are charged to expense as incurred. VOBA represents the outstanding value of in-force business acquired and is subject to amortization and interest. The value is based on the present value of estimated net cash flows embedded in the insurance contracts at the time of the acquisition and increased for subsequent deferrable expenses on purchased policies. (See also "Sales Inducements" below.) DAC, VOBA and DSI are adjusted for the impact of unrealized capital gains (losses) on investments, as if such gains (losses) have been realized, with corresponding adjustments included in AOCI.

Amortization Methodologies

The Company amortizes DAC and VOBA related to universal life ("UL") and variable universal life ("VUL") contracts and fixed and variable deferred annuity contracts over the estimated lives of the contracts in relation to the emergence of estimated gross profits. Assumptions as to mortality, persistency, interest crediting rates, fee income, returns associated with separate account performance, impact of hedge performance, expenses to administer the business and certain economic variables, such as inflation, are based on the Company's experience and overall capital markets. At each valuation date, estimated gross profits are updated with actual gross profits, and the assumptions underlying future estimated gross profits are evaluated for continued reasonableness. Adjustments to estimated gross profits require that amortization rates be revised retroactively to the date of the contract issuance ("unlocking").

Recoverability testing is performed for current issue year products to determine if gross profits are sufficient to cover DAC, VOBA, DSI, estimated benefits and related expenses. In subsequent years, the Company performs testing to assess the recoverability of DAC, VOBA and DSI on an annual basis, or more frequently if circumstances indicate a potential loss recognition issue exists. If DAC, VOBA or DSI are not deemed recoverable from future gross profits, charges will be applied against the DAC, VOBA or DSI balances before an additional reserve is established.

During the year ended December 31, 2015, the Company's reviews resulted in loss recognition of $342.0 before income taxes, of which $276.9 and $65.1 was recorded to Net amortization of DAC and VOBA and Interest credited and other benefits to contract owners, respectively, in the Statements of Operations, with a corresponding decrease on the Balance Sheets to Deferred policy acquisition costs, Value of business acquired, and Sales inducements to contract owners.

In assessing loss recognition related to DAC, VOBA and DSI, the Company must select an approach for aggregating different blocks of business in the loss recognition calculation. In the first quarter of 2013, the Company updated the aggregation approach used in assessment of such loss recognition. This change in estimate was due to certain organizational changes that commenced in the first quarter of 2013, which resulted in changes to how the Company manages the variable annuity business that is no longer actively marketed. As a result of this estimate change, the Company recognized loss recognition of $350.8 before taxes during the first quarter of 2013. This amount was recorded in the Statements of Operations as $306.0 to Net amortization of deferred policy acquisition costs and value of business acquired and $44.8 to Interest credited and other benefits to contract owners/policyholders, with a corresponding decrease in the Balance Sheets to Deferred policy acquisition costs, Value of business acquired and Sales inducements to contract owners.

Internal Replacements

Contract owners may periodically exchange one contract for another, or make modifications to an existing contract. These transactions are identified as internal replacements. Internal replacements that are determined to result in substantially unchanged contracts are accounted for as continuations of the replaced contracts. Any costs associated with the issuance of the new contracts are considered maintenance costs and expensed as incurred. Unamortized DAC, VOBA and DSI related to the replaced contracts continue to be deferred and amortized in connection with the new contracts. Internal replacements that are determined to result in contracts that are substantially changed are accounted for as extinguishments of the replaced contracts, and any unamortized DAC, VOBA and DSI related to the replaced contracts are written off to the same account in which amortization is reported in the Statements of Operations.

Assumptions

Changes in assumptions can have a significant impact on DAC, VOBA and DSI balances, amortization rates, reserve levels, and results of operations. Assumptions are management's best estimate of future outcome.

Several assumptions are considered significant in the estimation of gross profits associated with the Company's variable products. One significant assumption is the assumed return associated with the variable account performance. To reflect the volatility in the equity markets, this assumption involves a combination of near-term expectations and long-term assumptions regarding market

performance. The overall return on the variable account is dependent on multiple factors, including the relative mix of the underlying sub-accounts among bond funds and equity funds, as well as equity sector weightings. The Company's practice assumes that intermediate-term appreciation in equity markets reverts to the long-term appreciation in equity markets ("reversion to the mean"). The Company monitors market events and only changes the assumption when sustained deviations are expected. This methodology incorporates a 9% long-term equity return assumption, a 14% cap and a five-year look-forward period.

Other significant assumptions used in the estimation of gross profits include mortality, and for products with credited rates include interest rate spreads and credit losses. Estimated gross profits of variable annuity contracts are sensitive to mortality and estimated policyholder behavior assumptions, such as surrender, lapse and annuitization rates.

Sales Inducements

DSI represent benefits paid to contract owners for a specified period that are incremental to the amounts the Company credits on similar contracts without sales inducements and are higher than the contract's expected ongoing crediting rates for periods after the inducement. The Company defers sales inducements and amortizes DSI over the estimated lives of the related contracts using the same methodology and assumptions used to amortize DAC. The amortization of DSI is included in Interest credited and other benefits to contract owners in the Statements of Operations. Each year, or more frequently if circumstances indicate a potentially significant recoverability issue exists, the Company reviews DSI to determine the recoverability of these balances.

Future Policy Benefits and Contract Owner Accounts

Future Policy Benefits

The Company establishes and carries actuarially-determined reserves that are calculated to meet its future obligations, including estimates of unpaid claims and claims that the Company believes have been incurred but have not yet been reported as of the balance sheet date. The principal assumptions used to establish liabilities for future policy benefits are based on Company experience and periodically reviewed against industry standards. These assumptions include mortality, morbidity, policy lapse, contract renewal, payment of subsequent premiums or deposits by the contract owner, retirement, investment returns, inflation, benefit utilization and expenses. Changes in, or deviations from, the assumptions used can significantly affect the Company's reserve levels and related results of operations.

- Reserves for traditional life insurance contracts (term insurance, participating and non-participating whole life insurance and traditional group life insurance) and accident and health insurance represent the present value of future benefits to be paid to or on behalf of contract owners and related expenses, less the present value of future net premiums. Assumptions as to interest rates, mortality, expenses and persistency are based on the Company's estimates of anticipated experience at the period the policy is sold or acquired, including a provision for adverse deviation. Interest rates used to calculate the present value of these reserves ranged from 2.3% to 7.2%.
- Reserves for payout contracts with life contingencies are equal to the present value of expected future payments. Assumptions as to interest rates, mortality and expenses are based on the Company's experience at the period the policy is sold or acquired, including a provision for adverse deviation. Such assumptions generally vary by annuity plan type, year of issue and policy duration. Interest rates used to calculate the present value of future benefits ranged from 1.0% to 7.5%.

Although assumptions are "locked-in" upon the issuance of traditional life insurance contracts, certain accident and health insurance contracts and payout contracts with life contingencies, significant changes in experience or assumptions may require the Company to provide for expected future losses on a product by establishing premium deficiency reserves. Premium deficiency reserves are determined based on best estimate assumptions that exist at the time the premium deficiency reserve is established and do not include a provision for adverse deviation. During the year ended December 31, 2015, the Company established premium deficiency reserves of $126.0 million before tax related to certain payout annuity contracts, which was recorded as an increase in Policyholder benefits and contract owner balances with a corresponding increase in Deposits and reinsurance recoverable, as the reserves are ceded to an affiliate on a 100% coinsurance and coinsurance funds withheld basis. The establishment of this premium deficiency reserve had no impact in the Statements of Operations for the year ended December 31, 2015.

Contract Owner Account Balances
Contract owner account balances relate to universal life-type and investment-type contracts, as follows:

- Account balances for GICs are calculated using the amount deposited with the Company, less withdrawals, plus interest accrued to the ending valuation date. Interest on these contracts is accrued by a predetermined index, plus a spread or a fixed rate, established at the issue date of the contract.
- Account balances for universal life-type contracts, including VUL, are equal to cumulative deposits, less charges, withdrawals and account values released upon death, plus credited interest thereon.
- Account balances for fixed annuities and payout contracts without life contingencies are equal to cumulative deposits, less charges and withdrawals, plus credited interest thereon. Credited interest rates vary by product and ranged up to

8.0% for the years 2015, 2014 and 2013. Account balances for group immediate annuities without life contingent payouts are equal to the discounted value of the payment at the implied break-even rate.

- For fixed-indexed annuity contracts ("FIAs"), the aggregate initial liability is equal to the deposit received, plus a bonus, if applicable, and is split into a host component and an embedded derivative component. Thereafter, the host liability accumulates at a set interest rate, and the embedded derivative liability is recognized at fair value.

Product Guarantees and Additional Reserves
The Company calculates additional reserve liabilities for certain universal life-type products and certain variable annuity guaranteed benefits. The Company periodically evaluates its estimates and adjusts the additional liability balance, with a related charge or credit to benefit expense, if actual experience or other evidence suggests that earlier assumptions should be revised. Changes in, or deviations from, the assumptions used can significantly affect the Company's reserve levels and related results of operations.

Universal and Variable Life: Reserves for UL and VUL secondary guarantees and paid-up guarantees are calculated by estimating the expected value of death benefits payable and recognizing those benefits ratably over the accumulation period based on total expected assessments. The reserve for such products recognizes the portion of contract assessments received in early years used to compensate the Company for benefits provided in later years. Assumptions used, such as the interest rate, lapse rate and mortality, are consistent with assumptions used in estimating gross profits for purposes of amortizing DAC. Reserves for UL and VUL secondary guarantees and paid-up guarantees are recorded in Future policy benefits and contract owner account balances on the Balance Sheets.

The Company also calculates a benefit ratio for each block of business that meets the requirements for additional reserves and calculates an additional reserve by accumulating amounts equal to the benefit ratio multiplied by the assessments for each period, reduced by excess benefits during the period. The additional reserve is accumulated at interest rates consistent with the DAC model for the period. The calculated reserve includes provisions for UL contracts that produce expected gains from the insurance benefit function followed by losses from that function in later years. Additional reserves are recorded in Future policy benefits and contract owner account balances on the Balance Sheets.

GMDB and GMIB: Reserves for annuity guaranteed minimum death benefits ("GMDB") and guaranteed minimum income benefits ("GMIB") are determined by estimating the value of expected benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments. Expected experience is based on a range of scenarios. Assumptions used, such as the long-term equity market return, lapse rate and mortality, are consistent with assumptions used in estimating gross profits for the purpose of amortizing DAC. The assumptions of investment performance and volatility are consistent with the historical experience of the appropriate underlying equity index, such as the Standard & Poor's ("S&P") 500 Index. In addition, the reserve for the GMIB incorporates assumptions for the likelihood and timing of the potential annuitizations that may be elected by the contract owner. In general, the Company assumes that GMIB annuitization rates will be higher for policies with more valuable guarantees ("in the money"), where the notional benefit amount is in excess of the account value. Reserves for GMDB and GMIB are recorded in Future policy benefits and contract owner account balances on the Balance Sheets. Changes in reserves for GMDB and GMIB are reported in Interest credited and other benefits to contract owners/policyholders in the Statements of Operations.

Most contracts issued on or before December 31, 1999 with enhanced death benefit guarantees were reinsured to third-party reinsurers to mitigate the risk associated with such guarantees. For contracts issued after December 31, 1999, the Company instituted a variable annuity guarantee hedge program to mitigate the risks associated with these guarantees, which do not qualify for hedge accounting. The variable annuity guarantee hedge program is based on the Company entering into derivative positions to offset such exposures to GMDB and GMIB due to adverse changes in the equity markets.

GMAB, GMWB, GMWBL and FIA: The Company also issues certain products which contain embedded derivatives that are measured at estimated fair value separately from the host contracts. These products include annuity guaranteed minimum accumulation benefits ("GMAB"), guaranteed minimum withdrawal benefits without life contingencies ("GMWB"), guaranteed minimum withdrawal benefits with life contingent payouts ("GMWBL") and FIAs. Such embedded derivatives are recorded in Future policy benefits and contract owner account balances on the Balance Sheets, with changes in estimated fair value, along with attributed fees collected or payments made, reported in Other net realized capital gains (losses) in the Statements of Operations.

At inception of the GMAB, GMWB and GMWBL contracts, the Company projects a fee to be attributed to the embedded derivative portion of the guarantee equal to the present value of projected future guaranteed benefits. After inception, the estimated fair value of the GMAB, GMWB and GMWBL contracts is determined based on the present value of projected future guaranteed benefits, minus the present value of projected attributed fees. A risk neutral valuation methodology is used under which the cash flows from the guarantees are projected under multiple capital market scenarios using observable risk free rates. The projection of future guaranteed benefits and future attributed fees require the use of assumptions for capital markets (e.g., implied volatilities, correlation among indices, risk-free swap curve, etc.) and policyholder behavior (e.g., lapse, benefit utilization, mortality, etc.).

The estimated fair value of the embedded derivative in the FIA contracts is based on the present value of the excess of interest payments to the contract owners over the growth in the minimum guaranteed contract value. The excess interest payments are determined as the excess of projected index driven benefits over the projected guaranteed benefits. The projection horizon is over the anticipated life of the related contracts, which takes into account best estimate actuarial assumptions, such as partial withdrawals, full surrenders, deaths, annuitizations and maturities.

Certain FIA contracts contain guaranteed withdrawal benefit provisions. Reserves for these benefits are calculated by estimating the value of expected benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments.

The liabilities for the GMAB, GMWB, GMWBL and FIA embedded derivatives include a risk margin to capture uncertainties related to policyholder behavior assumptions. The margin represents additional compensation a market participant would require to assume these risks. The discount rate used to determine the fair value of the liabilities for the GMAB, GMWB, GMWBL and FIA embedded derivatives includes an adjustment to reflect the risk that these obligations will not be fulfilled (“nonperformance risk”).

Separate Accounts

Separate account assets and liabilities generally represent funds maintained to meet specific investment objectives of contract owners or participants who bear the investment risk, subject, in limited cases, to minimum guaranteed rates. Investment income and investment gains and losses generally accrue directly to such contract owners. The assets of each account are legally segregated and are not subject to claims that arise out of any other business of the Company or its affiliates.

Separate account assets supporting variable options under variable annuity contracts are invested, as designated by the contract owner or participant under a contract, in shares of mutual funds that are managed by the Company, or its affiliates, or in other selected mutual funds not managed by the Company, or its affiliates.

The Company reports separately, as assets and liabilities, investments held in the separate accounts and liabilities of separate accounts if:

- Such separate accounts are legally recognized;
- Assets supporting the contract liabilities are legally insulated from the Company's general account liabilities;
- Investments are directed by the contract owner or participant; and
- All investment performance, net of contract fees and assessments, is passed through to the contract owner.

The Company reports separate account assets that meet the above criteria at fair value on the Balance Sheets based on the fair value of the underlying investments. Separate account liabilities equal separate account assets. Investment income and net realized and unrealized capital gains (losses) of the separate accounts, however, are not reflected in the Statements of Operations, and the Statements of Cash Flows do not reflect investment activity of the separate accounts.

Long-term Debt

Long-term debt is carried at an amount equal to the unpaid principal balance, net of any remaining unamortized discount or premium attributable to issuance. Direct and incremental costs to issue the debt are recorded in Other assets on the Balance Sheets. Discounts, premiums and direct and incremental costs are amortized as a component of Interest expense in the Statements of Operations over the life of the debt using the effective interest method of amortization.

Repurchase Agreements

The Company engages in dollar repurchase agreements with MBS ("dollar rolls") and repurchase agreements with other collateral types to increase its return on investments and improve liquidity. Such arrangements meet the requirements to be accounted for as financing arrangements.

The Company enters into dollar roll transactions by selling existing MBS and concurrently entering into an agreement to repurchase similar securities within a short time frame at a lower price. Under repurchase agreements, the Company borrows cash from a counterparty at an agreed upon interest rate for an agreed upon time frame and pledges collateral in the form of securities. At the end of the agreement, the counterparty returns the collateral to the Company, and the Company, in turn, repays the loan amount along with the additional agreed upon interest.

The Company's policy requires that at all times during the term of the dollar roll and repurchase agreements that cash or other collateral types obtained is sufficient to allow the Company to fund substantially all of the cost of purchasing replacement assets. Cash received is invested in Short-term investments, with the offsetting obligation to repay the loan included within Other liabilities on the Balance Sheets. The carrying value of the securities pledged in dollar rolls and repurchase agreement transactions and the related repurchase obligation are included in Securities pledged and Short-term debt, respectively, on the Balance Sheets.

The primary risk associated with short-term collateralized borrowings is that the counterparty will be unable to perform under the terms of the contract. The Company's exposure is limited to the excess of the net replacement cost of the securities over the value of the short-term investments. The Company believes the counterparties to the dollar rolls and repurchase agreements are financially responsible and that the counterparty risk is minimal.

Recognition of Insurance Revenue and Related Benefits

Premiums related to traditional life insurance contracts and payout contracts with life contingencies are recognized in Premiums in the Statements of Operations when due from the contract owner. When premiums are due over a significantly shorter period than the period over which benefits are provided, any gross premium in excess of the net premium (i.e., the portion of the gross premium required to provide for all expected future benefits and expenses) is deferred and recognized into revenue in a constant relationship to insurance in force. Benefits are recorded in Interest credited and other benefits to contract owners/policyholders in the Statements of Operations when incurred.

Amounts received as payment for investment-type, universal life-type, fixed annuities, payout contracts without life contingencies and FIA contracts are reported as deposits to contract owner account balances. Revenues from these contracts consist primarily of fees assessed against the contract owner account balance for mortality and policy administration charges and are reported in Fee income. Surrender charges are reported in Other revenue. In addition, the Company earns investment income from the investment of contract deposits in the Company's general account portfolio, which is reported in Net investment income in the Statements of Operations. Fees assessed that represent compensation to the Company for services to be provided in future periods and certain other fees are deferred and amortized into revenue over the expected life of the related contracts in proportion to estimated gross profits in a manner consistent with DAC for these contracts. Benefits and expenses for these products include claims in excess of related account balances, expenses of contract administration and interest credited to contract owner account balances.

Income Taxes

The Company uses certain assumptions and estimates in determining the income taxes payable or refundable to/from Voya Financial, Inc. for the current year, the deferred income tax liabilities and assets for items recognized differently in its Financial Statements from amounts shown on its income tax returns and the federal income tax expense. Determining these amounts requires analysis and

interpretation of current tax laws and regulations, including the loss limitation rules associated with change in control. Management exercises considerable judgment in evaluating the amount and timing of recognition of the resulting income tax liabilities and assets. These judgments and estimates are reevaluated on a periodic basis. The Company will continue to evaluate as regulatory and business factors change.

Items required by tax regulations to be included in the tax return may differ from the items reflected in the financial statements. As a result, the effective tax rate reflected in the financial statements may be different than the actual rate applied on the tax return. Some of these differences are permanent such as the dividends received deduction which is estimated using information from the prior period and current year results. Other differences are temporary, reversing over time, such as the valuation of insurance reserves, and create deferred tax assets and liabilities.

The Company's deferred tax assets and liabilities resulting from temporary differences between financial reporting and tax bases of assets and liabilities are measured at the balance sheet date using enacted tax rates expected to apply to taxable income in the years the temporary differences are expected to reverse.

Deferred tax assets represent the tax benefit of future deductible temporary differences, net operating loss carryforwards and tax credit carryforwards. The Company evaluates and tests the recoverability of its deferred tax assets. Deferred tax assets are reduced by a valuation allowance if, based on the weight of evidence, it is more likely than not that some portion, or all, of the deferred tax assets will not be realized. Considerable judgment and the use of estimates are required in determining whether a valuation allowance is necessary and, if so, the amount of such valuation allowance. In evaluating the need for a valuation allowance, the Company considers many factors, including:

- The nature, frequency and severity of book income or losses in recent years;
- The nature and character of the deferred tax assets and liabilities;
- The recent cumulative book income (loss) position after adjustment for permanent differences;
- Taxable income in prior carryback years;
- Projected future taxable income, exclusive of reversing temporary differences and carryforwards;
- Projected future reversals of existing temporary differences;
- The length of time carryforwards can be utilized;
- Prudent and feasible tax planning strategies the Company would employ to avoid a tax benefit from expiring unused; and
- Tax rules that would impact the utilization of the deferred tax assets.

In establishing unrecognized tax benefits, the Company determines whether a tax position is more likely than not to be sustained under examination by the appropriate taxing authority. The Company also considers positions that have been reviewed and agreed to as part of an examination by the appropriate taxing authority. Tax positions that do not meet the more likely than not standard are not recognized in the Financial Statements. Tax positions that meet this standard are recognized in the Financial Statements. The Company measures the tax position as the largest amount of benefit that is greater than 50% likely of being realized upon ultimate resolution with the tax authority that has full knowledge of all relevant information.

Reinsurance

The Company utilizes reinsurance agreements in most aspects of its insurance business to reduce its exposure to large losses. Such reinsurance permits recovery of a portion of losses from reinsurers, although it does not discharge the primary liability of the Company as direct insurer of the risks reinsured.

For each of its reinsurance agreements, the Company determines whether the agreement provides indemnification against loss or liability relating to insurance risk. The Company reviews contractual features, particularly those that may limit the amount of insurance risk to which the reinsurer is subject or features that delay the timely reimbursement of claims. The assumptions used to account for both long and short-duration reinsurance agreements are consistent with those used for the underlying contracts. Ceded Future policy benefits and contract owner account balances are reported gross on the Balance Sheets.

Long-duration: For reinsurance of long-duration contracts that transfer significant insurance risk, the difference, if any, between the amounts paid and benefits received related to the underlying contracts is included in the expected net cost of reinsurance, which is

recorded as a component of the reinsurance asset or liability. Any difference between actual and expected net cost of reinsurance is recognized in the current period and included as a component of profits used to amortize DAC.

Short-duration: For prospective reinsurance of short-duration contacts that meet the criteria for reinsurance accounting, amounts paid are recorded as ceded premiums and ceded unearned premiums and are reflected as a component of Premiums in the Statements of Operations and Other assets on the Balance Sheets, respectively. Ceded unearned premiums are amortized through premiums over the remaining contract period in proportion to the amount of protection provided.

If the Company determines that a reinsurance agreement does not expose the reinsurer to a reasonable possibility of a significant loss from insurance risk, the Company records the agreement using the deposit method of accounting. Deposits received are included in Other liabilities, and deposits made are included in Deposits and reinsurance recoverable on the Balance Sheets. As amounts are paid or received, consistent with the underlying contracts, the deposit assets or liabilities are adjusted. Interest on such deposits is recorded as Other revenues or Other expenses in the Statements of Operations, as appropriate. Periodically, the Company evaluates the adequacy of the expected payments or recoveries and adjusts the deposit asset or liability through Other revenues or Other expenses, as appropriate.

Accounting for reinsurance requires extensive use of assumptions and estimates, particularly related to the future performance of the underlying business and the potential impact of counterparty credit risks. The Company periodically reviews actual and anticipated experience compared to the assumptions used to establish assets and liabilities relating to ceded and assumed reinsurance. The Company also evaluates the financial strength of potential reinsurers and continually monitors the financial condition of reinsurers.

Only those reinsurance recoverable balances deemed probable of recovery are recognized as assets on the Company's Balance Sheets and are stated net of allowances for uncollectible reinsurance. Amounts currently recoverable and payable under reinsurance agreements are included in Reinsurance recoverable and Other liabilities, respectively. Such assets and liabilities relating to reinsurance agreements with the same reinsurer are recorded net on the Balance Sheets if a right of offset exists within the reinsurance agreement. Premiums, Fee income and Interest credited and other benefits to contract owners/policyholders are reported net of reinsurance ceded. Amounts received from reinsurers for policy administration are reported in Other revenue.

The Company has entered into combined coinsurance and coinsurance funds withheld reinsurance arrangements that contain embedded derivatives whose carrying value is estimated based on the change in the fair value of the assets supporting the funds withheld payable under the agreements.

The Company currently has significant concentrations of ceded reinsurance with its affiliates, Security Life of Denver Insurance Company ("SLD") and Security Life of Denver International Limited ("SLDI") primarily related to GICs, SLD related to fixed annuities and UL policies and SLDI related to variable annuities. SLDI re-domesticated from the Cayman Islands to the State of Arizona, effective December 20, 2013. SLDI was approved as an Arizona-domiciled captive reinsurer by the Arizona Department of Insurance.

Participating Insurance

Participating business approximates 13.5% of the Company's ordinary life insurance in force and 30.1% of life insurance premium income. The amount of dividends to be paid is determined annually by the Board of Directors. Amounts allocable to participating contract owners are based on published dividend projections or expected dividend scales. Dividends to participating policyholders of $8.6, $8.6 and $9.1, were incurred during the years ended December 31, 2015, 2014 and 2013, respectively.

Contingencies

A loss contingency is an existing condition, situation or set of circumstances involving uncertainty as to possible loss that will ultimately be resolved when one or more future events occur or fail to occur. Examples of loss contingencies include pending or threatened adverse litigation, threat of expropriation of assets and actual or possible claims and assessments. Amounts related to loss contingencies are accrued and recorded in Other liabilities on the Balance Sheets if it is probable that a loss has been incurred and the amount can be reasonably estimated, based on the Company's best estimate of the ultimate outcome.

Adoption of New Pronouncements

Repurchase Agreements
In June 2014, the Financial Accounting Standards Board ("FASB") issued Accounting Standards Update ("ASU") 2014-11, "Transfers and Servicing (Accounting Standards Codification ("ASC") Topic 860): Repurchase-to-Maturity Transactions, Repurchase Financings, and Disclosures" ("ASU 2014-11"), which (1) changes the accounting for repurchase-to-maturity transactions to secured borrowing accounting and (2) requires separate accounting for a transfer of a financial asset executed with a repurchase agreement with the same counterparty. This results in secured borrowing accounting for the repurchase agreement. The amendments also require additional disclosures for certain transactions accounted for as a sale and for repurchase agreements, securities lending transactions and repurchase-to-maturity transactions that are accounted for as secured borrowings.

The provisions of ASU 2014-11 were adopted by the Company on January 1, 2015, with the exception of disclosure amendments for repurchase agreements, securities lending transactions and repurchase-to-maturity transactions that are accounted for as secured borrowings, which were adopted April 1, 2015. The adoption of the January 1, 2015 provisions had no effect on the Company's financial condition, results of operations or cash flows. The disclosures required by ASU 2014-11 are included in the *Investments* Note to these Financial Statements.

Discontinued Operations and Disposals
In April 2014, the FASB issued ASU 2014-08, "Presentation of Financial Statements (ASC Topic 205) and Property, Plant, and Equipment (ASC Topic 360): Reporting Discontinued Operations and Disclosures of Disposals of Components of an Entity" ("ASU 2014-08"), which requires the disposal of a component of an entity to be reported in discontinued operations if the disposal represents a strategic shift that has, or will have, a major effect on the entity's operations and financial results. The component should be reported in discontinued operations when it meets the criteria to be classified as held for sale, is disposed of by sale or is disposed of other than by sale.

The amendments also require additional disclosures about discontinued operations, including disclosures about an entity’s significant continuing involvement with a discontinued operation and disclosures for a disposal of an individually significant component of an entity that does not qualify for discontinued operations.

The provisions of ASU 2014-08 were adopted prospectively by the Company on January 1, 2015. The adoption had no effect on the Company’s financial condition, results of operations or cash flows.

Future Adoption of Accounting Pronouncements

Financial Instruments
In January 2016, the FASB issued ASU 2016-01, “Financial Instruments-Overall (ASC Subtopic 825-10): Recognition and Measurement of Financial Assets and Financial Liabilities” (“ASU 2016-01”), which requires:

- Equity investments (except those consolidated or accounted for under the equity method) to be measured at fair value with changes in fair value recognized in net income.
- Elimination of the disclosure of methods and significant assumptions used to estimate the fair value for financial instruments measured at amortized cost.
- The use of the exit price notion when measuring the fair value of financial instruments for disclosure purposes.
- Separate presentation in other comprehensive income of the portion of the total change in fair value of a liability resulting from a change in own credit risk if the liability is measured at fair value under the fair value option.
- Separate presentation on the balance sheet or financial statement notes of financial assets and financial liabilities by measurement category and form of financial asset.

The provisions of ASU 2016-01 are effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2017, with early adoption only permitted for certain provisions. Initial adoption of ASU 2016-01 should be reported on a modified retrospective basis, with a cumulative-effect adjustment to balance sheet as of the beginning of the year of adoption, except for certain provisions that should be applied prospectively. The Company is currently in the process of determining the impact of adoption of the provisions of ASU 2016-01.

Short-Duration Contracts
In May 2015, the FASB issued ASU 2015-09, "Financial Services - Insurance (ASC Topic 944): Disclosures about Short-Duration Contracts" ("ASU 2015-09"), which requires insurance entities to disclose for annual reporting periods information about the liability for unpaid claims and claim adjustment expenses and about significant changes in methodologies and assumptions used to calculate the liability for unpaid claims and claims adjustment expenses. The standard also requires entities to disclose, for annual and interim reporting periods, a rollforward of the liability for unpaid claims and claim adjustment expenses.

The provisions of ASU 2015-09 are effective, retrospectively, for annual periods beginning after December 15, 2015, and interim periods within annual periods beginning after December 15, 2016, with early adoption permitted. The Company is currently in the process of determining the impact of adoption of the provisions of ASU 2015-09.

Consolidation
In February 2015, the FASB issued ASU 2015-02, "Consolidation (ASC Topic 810): Amendments to the Consolidation Analysis" ("ASU 2015-02"), which:

- Modifies the evaluation of whether limited partnerships and similar legal entities are Variable Interest Entities ("VIEs") or Voting Interest Entities ("VOEs"), including the requirement to consider the rights of all equity holders at risk to determine if they have the power to direct the entity's most significant activities.
- Eliminates the presumption that a general partner should consolidate a limited partnership. Limited partnerships and similar entities will be VIEs unless the limited partners hold substantive kick-out rights in the participating rights.
- Affects the consolidation analysis of reporting entities that are involved with VIEs, particularly those that have fee arrangements and related party relationships.
- Provides a new scope exception for registered money market funds and similar unregistered money market funds, and ends the deferral granted to investment companies from applying the VIE guidance.

The provisions of ASU 2015-02 are effective for annual periods, and for interim periods within those annual periods, beginning after December 15, 2015, with early adoption permitted, using either a retrospective or modified retrospective approach. The Company plans to adopt the provisions of ASU 2015-02 on January 1, 2016 using the modified retrospective approach, and does not expect ASU 2015-02 to have an impact on the Company's financial condition or results of operations, but to impact disclosures only.

Hybrid Financial Instruments
In November 2014, the FASB issued ASU 2014-16, "Derivatives and Hedging (ASC Topic 815): Determining Whether the Host Contract in a Hybrid Financial Instrument Issued in the Form of a Share Is More Akin to Debt or to Equity" ("ASU 2014-16"), which requires an entity to determine the nature of the host contract by considering the economic characteristics and risks of the entire hybrid financial instrument, including all embedded derivative features.

The provisions of ASU 2014-16 are effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2015, with early adoption permitted. Initial adoption of ASU 2014-16 may be reported on a modified retrospective basis, with a cumulative-effect adjustment to retained earnings as of the beginning of the year of adoption, or on a full retrospective basis, with application to all prior periods presented. The Company does not expect ASU 2014-16 to have an impact on the Company's financial condition, results of operations or cash flows.

Revenue from Contracts with Customers
In May 2014, the FASB issued ASU 2014-09, "Revenue from Contracts with Customers (ASC Topic 606)" ("ASU 2014-09"), which requires an entity to recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. Revenue is recognized when, or as, the entity satisfies a performance obligation under the contract. The standard also requires disclosures regarding the nature, amount, timing and uncertainty of revenue and cash flows arising from contracts with customers.

In August 2015, the FASB issued ASU 2015-14 to amend the effective date of ASU 2014-09 to fiscal years, and interim periods within those fiscal years, beginning after December 15, 2017. Early adoption is permitted as of the original effective date, which was January 1, 2017. The provisions of ASU 2014-09 are effective retrospectively. The Company is currently in the process of determining the impact of adoption of the provisions of ASU 2014-09.

[1] Primarily U.S. dollar denominated.
[2] Embedded derivatives within fixed maturity securities are reported with the host investment. The changes in fair value of embedded derivatives are reported in Other net realized capital gains (losses) in the Statements of Operations.
[3] Represents OTTI reported as a component of Other comprehensive income (loss).

The amortized cost and fair value of fixed maturities, including securities pledged, as of December 31, 2015, are shown below by contractual maturity. Actual maturities may differ from contractual maturities as securities may be restructured, called or prepaid. MBS and Other ABS are shown separately because they are not due at a single maturity date.

	Amortized Cost	Fair Value
Due to mature:		
One year or less	$ 375.0	$ 378.4
After one year through five years	5,189.8	5,328.3
After five years through ten years	8,938.9	8,901.8
After ten years	5,431.2	5,577.9
Mortgage-backed securities	3,057.8	3,228.5
Other asset-backed securities	257.6	263.3
Fixed maturities, including securities pledged	$ 23,250.3	$ 23,678.2

The investment portfolio is monitored to maintain a diversified portfolio on an ongoing basis. Credit risk is mitigated by monitoring concentrations by issuer, sector and geographic stratification and limiting exposure to any one issuer.

As of December 31, 2015 and 2014, the Company did not have any investments in a single issuer, other than obligations of the U.S. Government and government agencies, with a carrying value in excess of 10% of the Company's Shareholder's equity.

The following tables set forth the composition of the U.S. and foreign corporate securities within the fixed maturity portfolio by industry category as of the dates indicated:

	Amortized Cost	Gross Unrealized Capital Gains	Gross Unrealized Capital Losses	Fair Value
December 31, 2015				
Communications	$ 1,147.2	$ 64.9	$ 17.9	$ 1,194.2
Financial	2,798.2	108.8	22.1	2,884.9
Industrial and other companies	8,778.0	282.1	165.9	8,894.2

Transportation	490.9	36.9	1.7	526.1
Total	$ 16,750.8	$ 1,111.1	$ 71.9	$ 17,790.0

Fixed Maturities and Equity Securities

The Company's fixed maturities and equity securities are currently designated as available-for-sale, except those accounted for using the FVO. Available-for-sale securities are reported at fair value and unrealized capital gains (losses) on these securities are recorded directly in AOCI and presented net of related changes in DAC, VOBA and Deferred income taxes. In addition, certain fixed maturities have embedded derivatives, which are reported with the host contract on the Balance Sheets.

The Company has elected the FVO for certain of its fixed maturities to better match the measurement of assets and liabilities in the Statements of Operations. Certain CMOs, primarily interest-only and principal-only strips, are accounted for as hybrid instruments and valued at fair value with changes in the fair value recorded in Other net realized capital gains (losses) in the Statements of Operations.

The Company invests in various categories of CMOs, including CMOs that are not agency-backed, that are subject to different degrees of risk from changes in interest rates and defaults. The principal risks inherent in holding CMOs are prepayment and extension risks related to significant decreases and increases in interest rates resulting in the prepayment of principal from the underlying mortgages, either earlier or later than originally anticipated. As of December 31, 2015 and 2014, approximately 46.6% and 41.7%, respectively, of the Company's CMO holdings, were invested in the above mentioned types of CMOs such as interest-only or principal-only strips, that are subject to more prepayment and extension risk than traditional CMOs.

Public corporate fixed maturity securities are distinguished from private corporate fixed maturity securities based upon the manner in which they are transacted. Public corporate fixed maturity securities are issued initially through market intermediaries on a registered basis or pursuant to Rule 144A under the Securities Act of 1933 (the "Securities Act") and are traded on the secondary market through brokers acting as principal. Private corporate fixed maturity securities are originally issued by borrowers directly to investors pursuant to Section 4(a)(2) of the Securities Act, and are traded in the secondary market directly with counterparties, either without the participation of a broker or in agency transactions.

Repurchase Agreements

As of December 31, 2015 and 2014, the Company did not have any securities pledged in dollar rolls, repurchase agreement transactions or reverse repurchase agreements.

Securities Lending

As of December 31, 2015 and 2014, the fair value of loaned securities was $147.9 and $121.2, respectively, and is included in Securities pledged on the Balance Sheets. As of December 31, 2015 and 2014, collateral retained by the lending agent and invested in short-term liquid assets on the Company's behalf was $153.6 and $125.4, respectively, and is recorded in Short-term investments under securities loan agreements, including collateral delivered on the Balance Sheets. As of December 31, 2015 and 2014, liabilities to return collateral of $153.6 and $125.4, respectively, is included in Payables under securities loan agreements, including collateral held on the Balance Sheets.

The following table sets forth borrowings under securities lending transactions by class of collateral pledged for the dates indicated:

	December 31, 2015	December 31, 2014
U.S. Treasuries	$ -	$ 25.3
U.S. Government agencies and authorities	-	1.0
U.S. corporate public securities	73.5	70.2
Foreign corporate public securities and foreign governments	80.1	28.9
Payables under securities loan agreements	$ 153.6	$ 125.4

The Company's securities lending activities are conducted on an overnight basis, and all securities loaned can be recalled at any time. The Company does not offset assets and liabilities associated with its securities lending program.

Variable Interest Entities ("VIEs")

The Company holds certain VIEs for investment purposes. VIEs may be in the form of private placement securities, structured securities, securitization transactions, or limited partnerships. The Company has reviewed each of its holdings and determined that consolidation of these investments in the Company's financial statements is not required, as the Company is not the primary beneficiary, because the Company does not have both the power to direct the activities that most significantly impact the entity's economic performance and the obligation or right to potentially significant losses or benefits, for any of its investments in VIEs. The Company did not provide any non-contractual financial support and its carrying value represents the Company's exposure to loss. The carrying value of the equity tranches of the Collateralized loan obligations ("CLOs") of $1.2 and $1.8 as of December 31, 2015 and 2014, respectively, is included in Limited partnerships/corporations on the Balance Sheets. Income and losses recognized on these investments are reported in Net investment income in the Statements of Operations.

Securitizations

The Company invests in various tranches of securitization entities, including RMBS, CMBS and ABS. Through its investments, the Company is not obligated to provide any financial or other support to these entities. Each of the RMBS, CMBS and ABS entities are thinly capitalized by design and considered VIEs. The Company's involvement with these entities is limited to that of a passive investor. The Company has no unilateral right to appoint or remove the servicer, special servicer or investment manager, which are generally viewed to have the power to direct the activities that most significantly impact the securitization entities' economic performance, in any of these entities, nor does the Company function in any of these roles. The Company through its investments or other arrangements does not have the obligation to absorb losses or the right to receive benefits from the entity that could potentially be significant to the entity. Therefore, the Company is not the primary beneficiary and will not consolidate any of the RMBS, CMBS and ABS entities in which it holds investments. These investments are accounted for as investments available-for-sale as described in the *Business, Basis of Presentation and Significant Accounting Policies* Note to these Financial Statements and unrealized capital gains (losses) on these securities are recorded directly in AOCI, except for certain RMBS which are accounted for under the FVO for which changes in fair value are reflected in Other net realized gains (losses) in the Statements of Operations. The Company's maximum exposure to loss on these structured investments is limited to the amount of its investment.

Unrealized Capital Losses

Unrealized capital losses (including noncredit impairments), along with the fair value of fixed maturity securities, including securities pledged, by market sector and duration were as follows as of December 31, 2015:

	Six Months or Less Below Amortized Cost		More Than Six Months and Twelve Months or Less Below Amortized Cost		More Than Twelve Months Below Amortized Cost		Total

*Less than $0.1.

Investments with fair values less than amortized cost are included in the Company's other-than-temporary impairments analysis. Impairments were recognized as disclosed in the "Evaluating Securities for Other-Than-Temporary Impairments" section below. The Company evaluates non-agency RMBS and ABS for "other-than-temporary impairments" each quarter based on actual and projected cash flows, after considering the quality and updated loan-to-value ratios reflecting current home prices of underlying collateral, forecasted loss severity, the payment priority within the tranche structure of the security and amount of any credit enhancements. The Company's assessment of current levels of cash flows compared to estimated cash flows at the time the securities were acquired (typically pre-2008) indicates the amount and the pace of projected cash flows from the underlying collateral has generally been lower and slower, respectively. However, since cash flows are typically projected at a trust level, the impairment review incorporates the security's position within the trust structure as well as credit enhancement remaining in the trust to determine whether an impairment is warranted. Therefore, while lower and slower cash flows will impact the trust, the effect on the valuation of a particular security within the trust will also be dependent upon the trust structure. Where the assessment continues to project full recovery of principal and interest on schedule, the Company has not recorded an impairment. Based on this analysis, the Company determined that the remaining investments in an unrealized loss position were not other-than-temporarily impaired and therefore no further other-than-temporary impairment was necessary.

Troubled Debt Restructuring

The Company invests in high quality, well performing portfolios of commercial mortgage loans and private placements. Under certain circumstances, modifications are granted to these contracts. Each modification is evaluated as to whether a troubled debt restructuring has occurred. A modification is a troubled debt restructuring when the borrower is in financial difficulty and the creditor makes concessions. Generally, the types of concessions may include reducing the face amount or maturity amount of the debt as originally stated, reducing the contractual interest rate, extending the maturity date at an interest rate lower than current market interest rates and/or reducing accrued interest. The Company considers the amount, timing and extent of the concession granted in determining any impairment or changes in the specific valuation allowance recorded in connection with the troubled debt restructuring. A valuation allowance may have been recorded prior to the quarter when the loan is modified in a troubled debt restructuring. Accordingly, the carrying value (net of the specific valuation allowance) before and after modification through a troubled debt restructuring may not change significantly, or may increase if the expected recovery is higher than the pre-modification recovery assessment. For the year ended December 31, 2015 and 2014, the Company had no new troubled debt restructurings for private placement bonds or commercial mortgage loans.

As of December 31, 2015, the Company held 8 commercial mortgage troubled debt restructured loans with a carrying value of $3.7. These 8 commercial mortgage loans were restructured in August 2013 with a pre-modification and post modification carrying value of $11.6. These loans represent what remains of an initial portfolio of 20 restructures with a pre-modification and post modification carrying value of $24.6. This portfolio of loans is comprised of cross-defaulted, cross-collateralized individual loans, which are owned by the same sponsor. Between the date of the troubled debt restructurings and December 31, 2015, this portfolio of loans has repaid $20.9 in principal.

As of December 31, 2015 and 2014, the Company did not have any commercial mortgage loans or private placements modified in a troubled debt restructuring with a subsequent payment default.

Mortgage Loans on Real Estate

The Company's mortgage loans on real estate are all commercial mortgage loans held for investment, which are reported at amortized cost, less impairment write-downs and allowance for losses. The Company diversifies its commercial mortgage loan portfolio by geographic region and property type to reduce concentration risk. The Company manages risk when originating commercial mortgage loans by generally lending only up to 75% of the estimated fair value of the underlying real estate. Subsequently, the Company continuously evaluates mortgage loans based on relevant current information including a review of loan-specific credit quality, property characteristics and market trends. Loan performance is monitored on a loan specific basis through the review of submitted appraisals, operating statements, rent revenues and annual inspection reports, among other items. This review ensures properties are performing at a consistent and acceptable level to secure the debt. The components to evaluate debt service coverage are received and reviewed at least annually to determine the level of risk.

The following table summarizes the Company's investment in mortgage loans as of the dates indicated:

	December 31, 2015			December 31, 2014		
	Impaired	Non Impaired	Total	Impaired	Non Impaired	Total
Commercial mortgage loans	$ 3.7	$ 3,308.2	$ 3,311.9	$ 17.1	$ 2,838.1	$ 2,855.2
Collective valuation allowance for losses	N/A	(1.0)	(1.0)	N/A	(0.8)	(0.8)
Total net commercial mortgage loans	$ 3.7	$ 3,307.2	$ 3,310.9	$ 17.1	$ 2,837.3	$ 2,854.4

N/A - Not Applicable

There were no impairments taken on the mortgage loan portfolio for the years ended December 31, 2015 and 2014.

The following table summarizes the activity in the allowance for losses for all commercial mortgage loans for the periods indicated:

	December 31, 2015	December 31, 2014
Collective valuation allowance for losses, balance at January 1	$ 0.8	$ 1.1
Addition to (reduction of) allowance for losses	0.2	(0.3)
Collective valuation allowance for losses, end of period	$ 1.0	$ 0.8

The carrying values and unpaid principal balances of impaired mortgage loans were as follows as of the dates indicated:

	December 31, 2015	December 31, 2014
Impaired loans without allowances for losses	$ 3.7	$ 17.1
Less: Allowances for losses on impaired loans	-	-
Impaired loans, net	$ 3.7	$ 17.1
Unpaid principal balance of impaired loans	$ 3.7	$ 17.1

The following table presents information on restructured loans as of the dates indicated:

	December 31, 2015	December 31, 2014
Troubled debt restructured loans	$ 3.7	$ 17.1

There were no mortgage loans in the Company's portfolio in process of foreclosure as of December 31, 2015 and 2014.

There were two loans 30 days or less in arrears, with respect to principal and interest as of December 31, 2015, with a total amortized cost of $2.1. There were no loans in arrears, with respect to principal and interest as of December 31, 2014.

The following table presents information on the average investment during the period in impaired loans and interest income recognized on impaired and troubled debt restructured loans for the periods indicated:

	Year Ended December 31,		
	2015	2014	2013
Impaired loans, average investment during the period (amortized cost) [(1)]	$ 10.4	$ 20.2	$ 11.7
Interest income recognized on impaired loans, on an accrual basis [(1)]	0.5	1.1	0.7
Interest income recognized on impaired loans, on a cash basis [(1)]	0.6	1.0	0.7
Interest income recognized on troubled debt restructured loans, on an accrual basis	0.5	1.1	0.7

[(1)] Includes amounts for Troubled debt restructured loans.

Loan-to-value ("LTV") and debt service coverage ("DSC") ratios are measures commonly used to assess the risk and quality of mortgage loans. The LTV ratio, calculated at time of origination, is expressed as a percentage of the amount of the loan relative

to the value of the underlying property. A LTV ratio in excess of 100% indicates the unpaid loan amount exceeds the underlying collateral. The DSC ratio, based upon the most recently received financial statements, is expressed as a percentage of the amount of a property's net income to its debt service payments. A DSC ratio of less than 1.0 indicates that property's operations do not generate sufficient income to cover debt payments. These ratios are utilized as part of the review process described above.

The following table presents the LTV ratios as of the dates indicated:

	December 31, 2015[1]	December 31, 2014[1]
Loan-to-Value Ratio:		
0% - 50%	$ 399.9	$ 367.2
>50% - 60%	927.9	674.2
>60% - 70%	1,772.0	1,671.0
>70% - 80%	207.0	136.4
>80% and above	5.1	6.4
Total Commercial mortgage loans	$ 3,311.9	$ 2,855.2

[1] Balances do not include collective valuation allowance for losses.

The following table presents the DSC ratios as of the dates indicated:

	December 31, 2015[1]	December 31, 2014[1]
Debt Service Coverage Ratio:		
Greater than 1.5x	$ 2,569.3	$ 2,085.8
>1.25x - 1.5x	505.3	397.3
>1.0x - 1.25x	145.6	282.4
Less than 1.0x	40.4	85.9
Commercial mortgage loans secured by land or construction loans	51.3	3.8
Total Commercial mortgage loans	$ 3,311.9	$ 2,855.2

[1] Balances do not include collective valuation allowance for losses.

Properties collateralizing mortgage loans are geographically dispersed throughout the United States, as well as diversified by property type, as reflected in the following tables as of the dates indicated:

	December 31, 2015[1]		December 31, 2014[1]	
	Gross Carrying Value	% of Total	Gross Carrying Value	% of Total
Commercial Mortgage Loans by U.S. Region:

Evaluating Securities for Other-Than-Temporary Impairments

The Company performs a regular evaluation, on a security-by-security basis, of its available-for-sale securities holdings, including fixed maturity securities and equity securities in accordance with its impairment policy in order to evaluate whether such investments are other-than-temporarily impaired.

The following table identifies the Company's credit-related and intent-related impairments included in the Statements of Operations, excluding impairments included in Other comprehensive income (loss) by type for the periods indicated:

	Year Ended December 31,					
	2015		2014		2013	
	Impairment	No. of Securities	Impairment	No. of Securities	Impairment	No. of Securities
U.S. corporate public securities	$ 11.0	10	$ 1.4	2	$ -	-
Foreign corporate public securities and foreign governments [1]	18.2	6	0.6	4	-	-
Foreign corporate private securities [1]	0.5	1	-	-	1.4	1
Residential mortgage-backed	2.7	27	2.8	39	7.5	57
Commercial mortgage-backed	0.4	2	0.1	2	0.3	2
Other asset-backed	-	-	0.5	2	1.1	3
Equity	- *	1	0.3	2	-	-
Total	$ 32.8	47	$ 5.7	51	$ 10.3	63

* Less than $0.1.
[1] Primarily U.S. dollar denominated.

The above tables include $7.3, $3.7 and $6.4 of write-downs related to credit impairments for the years ended December 31, 2015, 2014 and 2013, respectively, in Other-than-temporary impairments, which are recognized in the Statements of Operations. The remaining $25.5, $2.0 and $3.9, for the years ended December 31, 2015, 2014 and 2013, respectively, are related to intent impairments.

The following table summarizes these intent impairments, which are also recognized in earnings, by type for the periods indicated:

	Year Ended December 31,					
	2015		2014		2013	
	Impairment	No. of Securities	Impairment	No. of Securities	Impairment	No. of Securities
U.S. corporate public securities	$ 11.0	9	$ 1.2	2	$ -	-
Foreign corporate public securities and foreign governments [1]	14.0	5	0.6	4	-	-
Foreign corporate private securities [1]	-	-	-	-	-	-
Residential mortgage-backed	0.1	4	0.1	5	3.6	12
Commercial mortgage-backed	0.4	2	0.1	2	0.3	2
Other asset-backed	-	-	-	-	-	-
Equity	-	-	-	-	-	-
Total	$ 25.5	20	$ 2.0	13	$ 3.9	14

[1] Primarily U.S. dollar denominated.

The Company may sell securities during the period in which fair value has declined below amortized cost for fixed maturities or cost for equity securities. In certain situations, new factors, including changes in the business environment, can change the Company's previous intent to continue holding a security. Accordingly, these factors may lead the Company to record additional intent related capital losses.

The following table identifies the amount of credit impairments on fixed maturities for which a portion of the OTTI loss was recognized in Other comprehensive income (loss) and the corresponding changes in such amounts for the periods indicated:

	Year Ended December 31,		
	2015	2014	2013
Balance at January 1	$ 33.1	$ 42.1	$ 47.9
Additional credit impairments:			
On securities not previously impaired	-	0.4	0.5
On securities previously impaired	1.8	3.0	3.8
Reductions:			
Increase in cash flows	0.4	0.5	-
Securities sold, matured, prepaid or paid down	7.3	11.9	10.1
Balance at December 31	$ 27.2	$ 33.1	$ 42.1

Net Investment Income

The following table summarizes Net investment income for the periods indicated:

	Year Ended December 31,		
	2015	2014	2013
Fixed maturities	$ 1,169.5	$ 1,121.7	$ 1,075.8
Equity securities, available-for-sale	2.1	2.4	3.6
Mortgage loans on real estate	165.0	145.6	152.9
Policy loans	4.7	5.0	5.7
Short-term investments and cash equivalents	0.3	0.8	0.4
Other	18.3	39.9	79.7 [1]
Gross investment income	1,359.9	1,315.4	1,318.1
Less: investment expenses	54.4	50.7	50.9
Net investment income	$ 1,305.5	$ 1,264.7	$ 1,267.2

[1] Includes $42.4 in conjunction with a bankruptcy settlement for a prime broker who held assets on behalf of a limited partnership previously written down to realizable value.

As of December 31, 2015 and 2014, the Company had $1.7 and $0.2, respectively, of investments in fixed maturities that did not produce net investment income. Fixed maturities are moved to a non-accrual status when the investment defaults.

Interest income on fixed maturities is recorded when earned using an effective yield method, giving effect to amortization of premiums and accretion of discounts. Such interest income is recorded in Net investment income in the Statements of Operations.

Net Realized Capital Gains (Losses)

Net realized capital gains (losses) comprise the difference between the amortized cost of investments and proceeds from sale and redemption, as well as losses incurred due to the credit-related and intent-related other-than-temporary impairment of investments. Realized investment gains and losses are also primarily generated from changes in fair value of embedded derivatives within products and fixed maturities, changes in fair value of fixed maturities recorded at FVO and changes in fair value including accruals on derivative instruments, except for effective cash flow hedges. The cost of the investments on disposal is generally determined based on FIFO methodology.

Net realized capital gains (losses) were as follows for the periods indicated:

	Year Ended December 31,		
	2015	2014	2013
Fixed maturities, available-for-sale, including securities pledged	$ (37.5)	$ 2.4	$ (11.4)
Fixed maturities, at fair value option	(98.0)	(50.0)	(89.0)
Equity securities, available-for-sale	-	(0.1)	-
Derivatives	(86.8)	(33.8)	(3,050.2)
Embedded derivatives - fixed maturities	(5.0)	(2.7)	(24.3)
Guaranteed benefit derivatives	95.8	(708.4)	961.7
Other investments	(0.1)	18.5	(2.6)
Net realized capital gains (losses)	$ (131.6)	$ (774.1)	$ (2,215.8)
After-tax net realized capital gains (losses)	$ (85.6)	$ (503.2)	$ (1,440.3)

Proceeds from the sale of fixed maturities and equity securities, available-for-sale and the related gross realized gains and losses, before tax were as follows for the periods indicated:

	Year Ended December 31,		
	2015	2014	2013
Proceeds on sales	$ 1,700.4	$ 2,436.1	$ 4,548.9
Gross gains	24.7	21.9	41.6
Gross losses	35.6	26.3	27.0

3. Derivative Financial Instruments

The Company enters into the following types of derivatives:

Interest rate swaps: Interest rate swaps are used by the Company primarily to reduce market risks from changes in interest rates and to alter interest rate exposure arising from mismatches between assets and/or liabilities. Interest rate swaps are also used to hedge the interest rate risk associated with the value of assets it owns or in an anticipation of acquiring them. Using interest rate swaps, the Company agrees with another party to exchange, at specified intervals, the difference between fixed rate and floating rate interest payments, calculated by reference to an agreed upon notional principal amount. These transactions are entered into pursuant to master agreements that provide for a single net payment to be made to/from the counterparty at each due date. The Company utilizes these contracts in qualifying hedging relationships as well as non-qualifying hedging relationships.

Foreign exchange swaps: The Company uses foreign exchange or currency swaps to reduce the risk of change in the value, yield or cash flows associated with certain foreign denominated invested assets. Foreign exchange swaps represent contracts that require the exchange of foreign currency cash flows against U.S. dollar cash flows at regular periods, typically quarterly or semi-annually. The Company utilizes these contracts in qualifying hedging relationships as well as non-qualifying hedging relationships.

Credit default swaps: Credit default swaps are used to reduce credit loss exposure with respect to certain assets that the Company owns, or to assume credit exposure on certain assets that the Company does not own. Payments are made to or received from the counterparty at specified intervals. In the event of a default on the underlying credit exposure, the Company will either receive a payment (purchased credit protection) or will be required to make a payment (sold credit protection) equal to the par minus recovery value of the swap contract. The Company utilizes these contracts in non-qualifying hedging relationships.

Total return swaps: The Company uses total return swaps as a hedge against a decrease in variable annuity account values, which are invested in certain indices. Using total return swaps, the Company agrees with another party to exchange, at specified intervals, the difference between the economic risk and reward of assets or a market index and the LIBOR rate, calculated by reference to an agreed upon notional principal amount. No cash is exchanged at the onset of the contracts. Cash is paid and received over the life of the contract based upon the terms of the swaps. The Company utilizes these contracts in non-qualifying hedging relationships.

Currency forwards: The Company uses currency forward contracts to hedge policyholder liabilities associated with the variable annuity contracts which are linked to foreign indices. The currency fluctuations may result in a decrease in account values, which would increase the possibility of the Company incurring an expense for guaranteed benefits in excess of account values. The Company also utilizes currency forward contracts to hedge currency exposure related to invested assets. The Company utilizes these contracts in non-qualifying hedging relationships.

Forwards: The Company uses forward contracts to hedge certain invested assets against movement in interest rates, particularly mortgage rates. The Company uses To-Be-Announced mortgage-backed securities as an economic hedge against rate movements. The Company utilizes forward contracts in non-qualifying hedging relationships.

Futures: Futures contracts are used to hedge against a decrease in certain equity indices. Such decreases may result in a decrease in variable annuity account values which would increase the possibility of the Company incurring an expense for guaranteed benefits in excess of account values. The Company also uses futures contracts as a hedge against an increase in certain equity indices. Such increases may result in increased payments to the holders of the FIA contracts. The Company also uses interest rate futures contracts to hedge its exposure to market risks due to changes in interest rates. The Company enters into exchange traded futures with regulated futures commissions that are members of the exchange. The Company also posts initial and variation margins with the exchange on a daily basis. The Company utilizes exchange-traded futures in non-qualifying hedging relationships.

Swaptions: A swaption is an option to enter into a swap with a forward starting effective date. The Company uses swaptions to hedge the interest rate exposure associated with the minimum crediting rate and book value guarantees embedded in the retirement products that the Company offers. Increases in interest rates will generate losses on assets that are backing such liabilities. In certain instances, the Company locks in the economic impact of existing purchased swaptions by entering into offsetting written swaptions. Swaptions are also used to hedge against an increase in the interest rate benchmarked crediting strategies within FIA contracts. Such increases may result in increased payments to contract holders of FIA contracts and the interest rate swaptions offset this increased exposure. The Company pays a premium when it purchases the swaption. The Company utilizes these contracts in non-qualifying hedging relationships.

Options: The Company uses put options to manage the equity, interest rate and equity volatility risk of the economic liabilities associated with certain variable annuity minimum guaranteed benefits and/or to mitigate certain rebalancing costs resulting from increased volatility. The Company also uses call options to hedge against an increase in various equity indices. Such increases may result in increased payments to the holders of the FIA contracts. The Company pays an upfront premium to purchase these options. The Company utilizes these options in non-qualifying hedging relationships.

Variance swaps: The Company uses variance swaps to manage equity volatility risk on the economic liabilities associated with certain minimum guaranteed living benefits and/or to mitigate certain rebalancing costs resulting from increased volatility. An increase in the equity volatility results in a higher valuations of such liabilities. In an equity variance swap, the Company agrees with another party to exchange amounts in the future, based on the changes in equity volatility over a defined period. The Company utilizes equity variance swaps in non-qualifying hedging relationships.

Embedded derivatives: The Company also invests in certain fixed maturity instruments and has issued certain products that contain embedded derivatives whose market value is at least partially determined by, among other things, levels of or changes in domestic and/or foreign interest rates (short-term or long-term), exchange rates, prepayment rates, equity rates, or credit ratings/spreads. In addition, the Company has entered into coinsurance with funds withheld arrangements, which contain embedded derivatives.

The Company's use of derivatives is limited mainly to economic hedging to reduce the Company's exposure to cash flow variability of assets and liabilities, interest rate risk, credit risk, exchange rate risk and market risk. It is the Company's policy not to offset amounts recognized for derivative instruments and amounts recognized for the right to reclaim cash collateral or the obligation to return cash collateral arising from derivative instruments executed with the same counterparty under a master netting arrangement, which provides the Company with the legal right of offset.

The notional amounts and fair values of derivatives were as follows as of the dates indicated:

	December 31, 2015			December 31, 2014		
	Notional Amount	**Asset Fair Value**	**Liability Fair Value**	**Notional Amount**	**Asset Fair Value**	**Liability Fair Value**
Derivatives: Qualifying for hedge accounting[1]						
Cash flow hedges:			&sbsp;

Within products	N/A	-	3,628.1	N/A	-	3,488.8
Within reinsurance agreements	N/A	(15.6)	10.2	N/A	9.6	211.0
Total		$ 804.9	$ 3,842.9		$ 927.2	$ 4,040.4

[1] Open derivative contracts are reported as Derivatives assets or liabilities on the Balance Sheets at fair value.
N/A - Not Applicable

Based on the notional amounts, a substantial portion of the Company's derivative positions was not designated or did not qualify for hedge accounting as part of a hedging relationship as of December 31, 2015 and 2014. The Company utilizes derivative contracts mainly to hedge exposure to variability in cash flows, interest rate risk, credit risk, foreign exchange risk and equity market risk. The majority of derivatives used by the Company are designated as product hedges, which hedge the exposure arising from insurance liabilities or guarantees embedded in the contracts the Company offers through various product lines. These derivatives do not qualify for hedge accounting as they do not meet the criteria of being "highly effective" as outlined in ASC Topic 815, but do provide an economic hedge, which is in line with the Company's risk management objectives. The Company also uses derivatives contracts to hedge its exposure to various risks associated with the investment portfolio. The Company does not seek hedge accounting treatment for certain of these derivatives as they generally do not qualify for hedge accounting due to the criteria required under the portfolio hedging rules outlined in ASC Topic 815. The Company also uses credit default swaps coupled with other investments in order to produce the investment characteristics of otherwise permissible investments that do not qualify as effective accounting hedges under ASC Topic 815.

Although the Company has not elected to net its derivative exposures, the notional amounts and fair values of Over-The-Counter ("OTC") and cleared derivatives excluding exchange traded contracts and forward contracts (To Be Announced mortgage-backed securities) are presented in the tables below as of the dates indicated:

	December 31, 2015		
	Notional Amount	**Asset Fair Value**	**Liability Fair Value**
Credit contracts	$ 1,230.0	$ 2.3	$ 5.9
Equity contracts	11,528.3	167.5	53.9
Foreign exchange contracts	1,024.1	42.6	12.3
Interest rate contracts	24,030.4	530.8	120.1
		743.2	192.2
Counterparty netting[1]		(184.6)	(184.6)
Cash collateral netting[1]		(427.3)	(5.9)
Securities collateral netting[1]		(12.5)	(1.7)
Net receivables/payables		$ 118.8	$ -

[1] Represents the netting of receivable balances with payable balances, net of collateral, for the same counterparty under eligible netting agreements.

	December 31, 2014		
	Notional Amount	**Asset Fair Value**	**Liability Fair Value**
Credit contracts	$ 1,220.0	$ 4.1	$ 16.3
Equity contracts	13,184.3	317.1	201.7
Foreign exchange contracts	1,089.1	30.4	8.2
Interest rate contracts	24,099.5	436.7	106.3
		788.3	332.5
Counterparty netting[1]		(311.1)	(311.1)
Cash collateral netting[1]		(267.3)	(19.3)
Securities collateral netting[1]		(130.4)	(2.1)
Net receivables/payables		$ 79.5	$ -

[1] Represents the netting of receivable balances with payable balances, net of collateral, for the same counterparty under eligible netting agreements.

Collateral

Under the terms of the OTC Derivative International Swaps and Derivatives Association, Inc. ("ISDA ") agreements, the Company may receive from, or deliver to, counterparties collateral to assure that terms of the ISDA agreements will be met with regard to the Credit Support Annex ("CSA"). The terms of the CSA call for the Company to pay interest on any cash received equal to the Federal Funds rate. To the extent cash collateral is received and delivered, it is included in Payables under securities loan agreements, including collateral held and Short-term investments under securities loan agreements, including collateral delivered, respectively, on the Balance Sheets and is reinvested in short-term investments. Collateral held is used in accordance with the CSA to satisfy any obligations. Investment grade bonds owned by the Company are the source of noncash collateral posted, which is reported in Securities pledged on the Balance Sheets. As of December 31, 2015, the Company held $423.0 and $0.4 of net cash collateral related to OTC derivative contracts and cleared derivative contracts, respectively. As of December 31, 2014, the Company held $268.5 of net cash collateral and pledged $5.8 of net cash collateral related to OTC derivative contracts and cleared derivative contracts, respectively. In addition, as of December 31, 2015, the Company delivered $524.5 of securities and held $12.9 of securities as collateral. As of December 31, 2014, the Company delivered $505.6 of securities and held $130.5 of securities as collateral.

Net realized gains (losses) on derivatives were as follows for the periods indicated:

	Year Ended December 31,		
	2015	2014	2013
Derivatives: Qualifying for hedge accounting[(1)]:			
Cash flow hedges:			
Interest rate contracts	$ 0.3	$ 0.2	$ - *
Foreign exchange contracts	0.8	0.7	0.2
Fair value hedges:			
Interest rate contracts	(3.6)	(12.9)	15.6
Derivatives: Non-qualifying for hedge accounting[(2)]:			
Interest rate contracts	135.4	797.0	(920.0)
Foreign exchange contracts	56.8	91.8	53.6
Equity contracts	(277.3)	(911.4)	(2,204.2)
Credit contracts	0.8	0.8	4.6
Embedded derivatives:			
Within fixed maturity investments[(2)]	(5.0)	(2.7)	(24.3)
Within products[(2)]	95.8	(708.4)	961.7
Within reinsurance agreements[(3)]	175.6	(231.1)	311.3
Total	$ 179.6	$ (976.0)	$ (1,801.5)

* Less than $0.1.
(1) Changes in value for effective fair value hedges are recorded in Other net realized capital gains (losses). Changes in fair value upon disposal for effective cash flow hedges are amortized through Net investment income and the ineffective portion is recorded in Other net realized capital gains (losses) in the Statements of Operations. For the years ended December 31, 2015, 2014 and 2013, ineffective amounts were immaterial.
(2) Changes in value are included in Other net realized capital gains (losses) in the Statements of Operations.
(3) Changes in value are included in Interest credited and other benefits to contract owners/policyholders in the Statements of Operations.

Credit Default Swaps

The Company has entered into various credit default swaps. When credit default swaps are sold, the Company assumes credit exposure to certain assets that it does not own. Credit default swaps may also be purchased to reduce credit exposure in the Company's portfolio. Credit default swaps involve a transfer of credit risk from one party to another in exchange for periodic payments. As of December 31, 2015, the fair values of credit default swaps of $2.3 and $5.9 were included in Derivatives assets and Derivatives liabilities, respectively, on the Balance Sheets. As of December 31, 2014, the fair value of credit default swaps of $4.1 and $16.3 were included in Derivatives assets and Derivatives liabilities, respectively, on the Balance Sheets. As of December 31, 2015, and 2014, the maximum potential future net exposure to the Company was $220.0 on credit default swaps. These instruments are typically written for a maturity period of 5 years and contain no recourse provisions. If the Company's current debt and claims paying ratings were downgraded in the future, the terms in the Company's derivative agreements may be triggered, which could negatively impact overall liquidity.

4. Fair Value Measurements

Fair Value Measurement

The Company categorizes its financial instruments into a three-level hierarchy based on the priority of the inputs to the valuation technique, pursuant to ASU 2011-04, "Fair Value Measurements (ASC Topic 820): Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP" ("ASU 2011-04"). The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure fair value fall within different levels of the hierarchy, the category level is based on the lowest

priority level input that is significant to the fair value measurement of the instrument. Financial assets and liabilities recorded at fair value on the Balance Sheets are categorized as follows:

- Level 1 - Unadjusted quoted prices for identical assets or liabilities in an active market. The Company defines an active market as a market in which transactions take place with sufficient frequency and volume to provide pricing information on an ongoing basis.
- Level 2 - Quoted prices in markets that are not active or valuation techniques that require inputs that are observable either directly or indirectly for substantially the full term of the asset or liability. Level 2 inputs include the following:

a) Quoted prices for similar assets or liabilities in active markets;
b) Quoted prices for identical or similar assets or liabilities in non-active markets;
c) Inputs other than quoted market prices that are observable; and
d) Inputs that are derived principally from or corroborated by observable market data through correlation or other means.

- Level 3 - Prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. These valuations, whether derived internally or obtained from a third party, use critical assumptions that are not widely available to estimate market participant expectations in valuing the asset or liability.

When available, the estimated fair value of financial instruments is based on quoted prices in active markets that are readily and regularly obtainable. When quoted prices in active markets are not available, the determination of estimated fair value is based on market standard valuation methodologies, including discounted cash flow methodologies, matrix pricing or other similar techniques.

The following table presents the Company's hierarchy for its assets and liabilities measured at fair value on a recurring basis as of December 31, 2015:

	Level 1	Level 2	Level 3	Total
Assets:			&sbsp;	
Fixed maturities, including securities pledged:				
U.S. Treasuries	$ 1,049.2	$ 9.5	$ -	$ 1,058.7
U.S. Government agencies and authorities	-	81.9	-	81.9
State, municipalities and political subdivisions	-	360.5	-	360.5
U.S. corporate public securities	-	10,871.2	0.7	10,871.9
U.S. corporate private securities	-	2,067.1	327.3	2,394.4
Foreign corporate public securities and foreign governments[1]	-	2,791.8	1.2	2,793.0
Foreign corporate private securities[1]	-	2,481.0	145.0	2,626.0
Residential mortgage-backed securities	-	1,856.5	28.6	1,885.1
Commercial mortgage-backed securities	-	1,331.3	12.1	1,343.4
Other asset-backed securities	-	252.0	11.3	263.3
Total fixed maturities, including securities pledged	1,049.2	22,102.8	526.2	23,678.2
Equity securities, available-for-sale	12.5	-	6.7	19.2
Derivatives:				
Interest rate contracts	-	530.8	-	530.8
Foreign exchange contracts	-	42.6	-	42.6
Equity contracts	56.2	161.8	5.7	223.7
Credit contracts	-	2.3	-	2.3
Embedded derivative on reinsurance	-	(15.6)	-	(15.6)

Valuation of Financial Assets and Liabilities at Fair Value

Certain assets and liabilities are measured at estimated fair value on the Company's Balance Sheets. The Company defines fair value as the price that would be received to sell an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. The exit price and the transaction (or entry) price will be the same at initial recognition in many circumstances. However, in certain cases, the transaction price may not represent fair value. The fair value of a liability is based on the amount that would be paid to

transfer a liability to a third-party with an equal credit standing. Fair value is required to be a market-based measurement that is determined based on a hypothetical transaction at the measurement date, from a market participant's perspective. The Company considers three broad valuation techniques when a quoted price is unavailable: (i) the market approach, (ii) the income approach and (iii) the cost approach. The Company determines the most appropriate valuation technique to use, given the instrument being measured and the availability of sufficient inputs. The Company prioritizes the inputs to fair valuation techniques and allows for the use of unobservable inputs to the extent that observable inputs are not available.

The Company utilizes a number of valuation methodologies to determine the fair values of its financial assets and liabilities in conformity with the concepts of exit price and the fair value hierarchy as prescribed in ASC Topic 820. Valuations are obtained from third-party commercial pricing services, brokers and industry-standard, vendor-provided software that models the value based on market observable inputs. The valuations obtained from third-party commercial pricing services are non-binding. The Company reviews the assumptions and inputs used by third-party commercial pricing services for each reporting period in order to determine an appropriate fair value hierarchy level. The documentation and analysis obtained from third-party commercial pricing services are reviewed by the Company, including in-depth validation procedures confirming the observability of inputs. The valuations are reviewed and validated monthly through the internal valuation committee price variance review, comparisons to internal pricing models, back testing to recent trades or monitoring of trading volumes.

The following valuation methods and assumptions were used by the Company in estimating the reported values for the investments and derivatives described below:

Fixed maturities: The fair values for actively traded marketable bonds are determined based upon the quoted market prices and are classified as Level 1 assets. Assets in this category primarily include certain U.S. Treasury securities.

For fixed maturities classified as Level 2 assets, fair values are determined using a matrix-based market approach, based on prices obtained from third-party commercial pricing services and the Company’s matrix and analytics-based pricing models, which in each case incorporate a variety of market observable information as valuation inputs. The market observable inputs used for these fair value measurements, by fixed maturity asset class, are as follows:

U.S. Treasuries: Fair value is determined using third-party commercial pricing services, with the primary inputs being stripped interest and principal U.S. Treasury yield curves that represent a U.S. Treasury zero-coupon curve.
U.S. government agencies and authorities, State, municipalities and political subdivisions: Fair value is determined using third-party commercial pricing services, with the primary inputs being U.S. Treasury yield curves, trades of comparable securities, credit spreads off benchmark yields and issuer ratings.

U.S. corporate public securities, Foreign corporate public securities and foreign governments: Fair value is determined using third-party commercial pricing services, with the primary inputs being benchmark yields, trades of comparable securities, issuer ratings, bids and credit spreads off benchmark yields.

U.S. corporate private securities and Foreign corporate private securities: Fair values are determined using a matrix and analytics-based pricing model. The model incorporates the current level of risk-free interest rates, current corporate credit spreads, credit quality of the issuer and cash flow characteristics of the security. The model also considers a liquidity spread, the value of any collateral, the capital structure of the issuer, the presence of guarantees, and prices and quotes for comparably rated publicly traded securities.

RMBS, CMBS and ABS: Fair value is determined using third-party commercial pricing services, with the primary inputs being credit spreads off benchmark yields, prepayment speed assumptions, current and forecasted loss severity, debt service coverage ratios, collateral type, payment priority within tranche and the vintage of the loans underlying the security.

Generally, the Company does not obtain more than one vendor price from pricing services per instrument. The Company uses a hierarchy process in which prices are obtained from a primary vendor and, if that vendor is unable to provide the price, the next vendor in the hierarchy is contacted until a price is obtained or it is determined that a price cannot be obtained from a commercial

pricing service. When a price cannot be obtained from a commercial pricing service, independent broker quotes are solicited. Securities priced using independent broker quotes are classified as Level 3.

Broker quotes and prices obtained from pricing services are reviewed and validated through an internal valuation committee price variance review, comparisons to internal pricing models, back testing to recent trades, or monitoring of trading volumes. As of December 31, 2015, $504.8 and $18.6 billion of a total fair value of $23.7 billion in fixed maturities, including securities pledged, were valued using unadjusted broker quotes and unadjusted prices obtained from pricing services, respectively and verified through the review process. The remaining balance in fixed maturities consisted primarily of privately placed bonds valued using a matrix-based pricing. As of December 31, 2014, $467.8 and $18.1 billion of a total fair value of $23.3 billion in fixed maturities, including securities pledged, were valued using unadjusted broker quotes and unadjusted prices obtained from pricing services, respectively and verified through the review process. The remaining balance in fixed maturities consisted primarily of privately placed bonds valued using a matrix-based pricing.

All prices and broker quotes obtained go through the review process described above including valuations for which only one broker quote is obtained. After review, for those instruments where the price is determined to be appropriate, the unadjusted price provided is used for financial statement valuation. If it is determined that the price is questionable, another price may be requested from a different vendor. The internal valuation committee then reviews all prices for the instrument again, along with information from the review, to determine which price best represents exit price for the instrument.

Fair values of privately placed bonds are determined primarily using a matrix-based pricing model and are generally classified as Level 2 assets. The model considers the current level of risk-free interest rates, current corporate spreads, the credit quality of the issuer and cash flow characteristics of the security. Also considered are factors such as the net worth of the borrower, the value of collateral, the capital structure of the borrower, the presence of guarantees and the Company's evaluation of the borrower's ability to compete in its relevant market. Using this data, the model generates estimated market values which the Company considers reflective of the fair value of each privately placed bond.

Equity securities, available-for-sale: Fair values of publicly traded equity securities are based upon quoted market price and are classified as Level 1 assets. Other equity securities, typically private equities or equity securities not traded on an exchange, are valued by other sources such as analytics or brokers and are classified as Level 2 or Level 3 assets.

Derivatives: Derivatives are carried at fair value which is determined using the Company's derivative accounting system in conjunction with observable key financial data from third party sources, such as yield curves, exchange rates, S&P 500 Index prices, London Interbank Offered Rates ("LIBOR") and Overnight Index Swap ("OIS") rates. The Company uses OIS for valuations of collateralized interest rate derivatives, which are obtained from third-party sources. For those derivatives that are unable to be valued by the accounting system, the Company typically utilizes values established by third-party brokers. Counterparty credit risk is considered and incorporated in the Company's valuation process through counterparty credit rating requirements and monitoring of overall exposure. It is the Company's policy to transact only with investment grade counterparties with a credit rating of A- or better. The Company's nonperformance risk is also considered and incorporated in the Company's valuation process. Valuations for the Company's futures and interest rate forward contracts are based on unadjusted quoted prices from an active exchange and, therefore, are classified as Level 1. The Company also has certain credit default swaps and options that are priced using models that primarily use market observable inputs, but contain inputs that are not observable to market participants, which have been classified as Level 3. The remaining derivative instruments, including those priced by third-party vendors, are valued based on market observable inputs and are classified as Level 2.

Cash and cash equivalents, Short-term investments and Short-term investments under securities loan agreement: The carrying amounts for cash reflect the assets' fair values. The fair values for cash equivalents and most short-term investments are determined based on quoted market prices. These assets are classified as Level 1. Other short-term investments are valued and classified in the fair value hierarchy consistent with the policies described herein, depending on investment type.

Assets held in separate accounts: Assets held in separate accounts are reported at the quoted fair values of the underlying investments in the separate accounts. The underlying investments include mutual funds, short-term investments and cash, the valuations of which are based upon a quoted market price and are included in Level 1. Fixed maturity valuations are obtained from third-party commercial pricing services and brokers and are classified in the fair value hierarchy consistent with the policy described above for fixed maturities.

Guaranteed benefit derivatives: The Company records reserves for annuity contracts containing GMAB, GMWB and GMWBL riders. The guarantee is an embedded derivative and is required to be accounted for separately from the host variable annuity contract. The fair value of the obligation is calculated based on actuarial and capital market assumptions related to the projected cash flows, including benefits and related contract charges, over the anticipated life of the related contracts. The cash flow estimates are produced by using stochastic techniques under a variety of market return scenarios and other market implied assumptions. These derivatives are classified as Level 3 liabilities in the fair value hierarchy.

The indexed-crediting feature in the Company's FIA contracts is an embedded derivative that is required to be accounted for separately from the host contract. The fair value of the obligation is calculated based on actuarial and capital market assumptions related to the projected cash flows, including benefits and related contract charges, over the anticipated life of the related contracts. The cash flow estimates are produced by market implied assumptions. These derivatives are classified as Level 3 liabilities in the fair value hierarchy.

The discount rate used to determine the fair value of the Company's GMAB, GMWB, GMWBL and FIA embedded derivative liabilities includes an adjustment to reflect nonperformance risk. The nonperformance risk adjustment incorporates a blend of observable, similarly rated peer holding company credit default swap spreads, adjusted to reflect the credit quality of the Company, the issuer of the guarantee, as well as an adjustment to reflect the priority of policyholder claims.

The Company's valuation actuaries are responsible for the policies and procedures for valuing the embedded derivatives, reflecting the capital markets and actuarial valuation inputs and nonperformance risk in the estimate of the fair value of the embedded derivatives. The actuarial and capital market assumptions for each liability are approved by each product's Chief Risk Officer ("CRO"), including an independent annual review by the CRO. Models used to value the embedded derivatives must comply with the Company's governance policies.

Quarterly, an attribution analysis is performed to quantify changes in fair value measurements and a sensitivity analysis is used to analyze the changes. The changes in fair value measurements are also compared to corresponding movements in the hedge target to assess the validity of the attributions. The results of the attribution analysis are reviewed by the valuation actuaries, responsible CFOs, Controllers, CROs and/or others as nominated by management.

Embedded derivative on reinsurance: The carrying value of embedded derivatives is estimated based upon the change in the fair value of the assets supporting the funds withheld payable under reinsurance agreements. As the fair value of the assets held in trust is based on a quoted market price (Level 1), the fair value of the embedded derivative is based on market observable inputs and is classified as Level 2.

ansfers in and out of Level 1 and 2

There were no securities transferred between Level 1 and Level 2 for the years ended December 31, 2015 and 2014. The Company's policy is to recognize transfers in and transfers out as of the beginning of the reporting period.

Level 3 Financial Instruments

The fair values of certain assets and liabilities are determined using prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement (i.e., Level 3 as defined by ASC Topic 820), including but not limited to liquidity spreads for investments within markets deemed not currently active. These valuations, whether derived internally or obtained from a third party, use critical assumptions that are not widely available to estimate market participant expectations in valuing the asset or liability. In addition, the Company has determined, for certain financial instruments, an active market is such a significant input to determine fair value that the presence of an inactive market may lead to classification in Level 3. In light of the methodologies employed to obtain the fair values of financial assets and liabilities classified as Level 3, additional information is presented below.

The following table summarizes the change in fair value of the Company's Level 3 assets and liabilities and transfers in and out of Level 3 for the period indicated:

	Year Ended December 31, 2015										
	Fair Value as of January 1	Total Realized/Unrealized Gains (Losses) Included in:									
		Net Income	OCI	Purchases	Issuances	Sales	Settlements	Transfers into Level 3[3]	Transfers out of Level 3[3]	Fair Value as of December 31	Change In Unrealized Gains (Losses) Included in Earnings[4]

Cash and cash equivalents, short-term investments and short-term investments under securities loan agreements	-	-	-	1.8	-	-	-	-	-	1.8	-

[1] Primarily U.S. dollar denominated
[2] All gains and losses on Level 3 liabilities are classified as realized gains (losses) for the purpose of this disclosure because it is impracticable to track realized and unrealized gains (losses) separately on a contract-by-contract basis. These amounts are included in Other net realized capital gains (losses) in the Statements of Operations.
[3] The Company's policy is to recognize transfers in and transfers out as of the beginning of the reporting period.
[4] For financial instruments still held as of December 31, amounts are included in Net investment income and Total net realized capital gains (losses) in the Statements of Operations.

For the years ended December 31, 2015 and 2014, the transfers in and out of Level 3 for fixed maturities and equity securities, were due to the variation in inputs relied upon for valuation each quarter. Securities that are primarily valued using independent broker quotes when prices are not available from one of the commercial pricing services are reflected as transfers into Level 3. When securities are valued using more widely available information, the securities are transferred out of Level 3 and into Level 1 or 2, as appropriate.

Significant Unobservable Inputs

The Company's Level 3 fair value measurements of its fixed maturities, equity securities available-for-sale and equity and credit derivative contracts are primarily based on broker quotes for which the quantitative detail of the unobservable inputs is neither provided nor reasonably corroborated, thus negating the ability to perform a sensitivity analysis. The Company performs a review of broker quotes by performing a monthly price variance comparison and back tests broker quotes to recent trade prices.

Quantitative information about the significant unobservable inputs used in the Company's Level 3 fair value measurements of its guaranteed benefit derivatives is presented in the following sections and table.

Significant unobservable inputs used in the fair value measurements of GMABs, GMWBs and GMWBLs include long-term equity and interest rate implied volatility, correlations between the rate of return on policyholder funds and between interest rates and equity returns, nonperformance risk, mortality and policyholder behavior assumptions, such as benefit utilization, lapses and partial withdrawals. Such inputs are monitored quarterly.

Significant unobservable inputs used in the fair value measurements of FIAs include nonperformance risk and policyholder behavior assumptions, such as lapses and partial withdrawals. Such inputs are monitored quarterly.

Following is a description of selected inputs:

Equity/Interest Rate Volatility: A term-structure model is used to approximate implied volatility for the equity indices and swap rates for GMAB, GMWB and GMWBL fair value measurements. Where no implied volatility is readily available in the market, an alternative approach is applied based on historical volatility.

Correlations: Integrated interest rate and equity scenarios are used in GMAB, GMWB and GMWBL fair value measurements to better reflect market interest rates and interest rate volatility correlations between equity and fixed income fund groups and between equity fund groups and interest rates. The correlations are based on historical fund returns and swap rates from external sources.

Nonperformance Risk: For the estimate of the fair value of embedded derivatives associated with the Company's product guarantees, the Company uses a blend of observable, similarly rated peer company credit default swap spreads, adjusted to reflect the credit quality of the Company as well as adjustment to reflect the priority of policyholder claims.

Actuarial Assumptions: Management regularly reviews actuarial assumptions, which are based on the Company's experience and periodically reviewed against industry standards. Industry standards and Company experience may be limited on certain products.

The following table presents the unobservable inputs for Level 3 fair value measurements as of December 31, 2015:

	Range[1]		
Unobservable Input	**GMWB / GMWBL**	**GMAB**	**FIA**
Long-term equity implied volatility	15% to 25%	15% to 25%	-
Interest rate implied volatility	0.1% to 18%	0.1% to 18%	-
Correlations between:			
Equity Funds	48% to 98%	48% to 98%	-
Equity and Fixed Income Funds	-38% to 62%	-38% to 62%	-
Interest Rates and Equity Funds	-32% to 16%	-32% to 16%	-
Nonperformance risk	0.23% to 1.3%	0.23% to 1.3%	0.23% to 1.3%
Actuarial Assumptions:			
Benefit Utilization	85% to 100% [2]	-	-
Partial Withdrawals	0% to 10%	0% to 10%	0% to 10%
Lapses	0.08% to 22% [3][4]	0.08% to 25% [3][4]	0% to 60% [3]
Mortality	- [5]	- [5]	- [5]

[1] Represents the range of reasonable assumptions that management has used in its fair value calculations.

[2] Those policyholders who have elected systematic withdrawals are assumed to continue taking withdrawals. As a percent of account value, 36% are taking systematic withdrawals. Of those policyholders who are not taking withdrawals, the Company assumes that 85% will begin systematic withdrawals after a delay period. The utilization function varies by policyholder age and policy duration. Interactions with lapse and mortality also affect utilization. The utilization rate for GMWB and GMWBL tends to be lower for younger contract owners and contracts that have not reached their maximum accumulated GMWB and GMWBL benefit amount. There is also a lower utilization rate, though indirectly, for contracts that are less "in the money" (i.e., where the notional benefit amount is in excess of the account value) due to higher lapses. Conversely, the utilization rate tends to be higher for contract owners near or beyond retirement age and contracts that have accumulated their maximum GMWB or GMWBL benefit amount. There is also a higher utilization rate, though indirectly, for contracts which are highly "in the money". The chart below provides the GMWBL account value by current age group and average expected delay times from the associated attained age group as of December 31, 2015 (account value amounts are in $ billions).

	Account Values			
Attained Age Group	**In the Money**	**Out of the Money**	**Total**	**Average Expected Delay (Years)****
< 60	$ 2.2	$ - *	$ 2.2	9.0
60-69	6.1	- *	6.1	4.2
70+	5.4	- *	5.4	2.4
	$ 13.7	$ - *	$ 13.7	5.0

*Less than $0.1.

** For population expected to withdraw in future. Excludes policies taking systematic withdraws and 15% of policies the Company assumes will never withdraw.

[3] Lapse rates tend to be lower during the contractual surrender charge period and higher after the surrender charge period ends; the highest lapse rates occur in the year immediately after the end of the surrender charge period.

[4] The Company makes dynamic adjustments to lower the lapse rates for contracts that are more "in the money." The table below shows an analysis of policy account values according to whether they are in or out of the surrender charge period and to whether they are "in the money" or "out of the money" as of December 31, 2015 (account value amounts are in $ billions).

		GMAB		GMWB/GMWBL	
	Moneyness	**Account Value**	**Lapse Range**	**Account Value**	**Lapse Range**
During Surrender Charge Period					
	In the Money**	$ - *	0.08% to 7.2%	$ 4.9	0.08% to 5.6%
	Out of the Money	- *	0.41% to 7.9%	- *	0.36% to 5.9%
After Surrender Charge Period					
	In the Money**	$ - *	2.5% to 22.5%	$ 8.8	1.4% to 20.7%
	Out of the Money	- *	11.9% to 24.8%	0.6	5.0% to 21.7%

* Less than $0.1.

** The low end of the range corresponds to policies that are highly "in the money." The high end of the range corresponds to the policies that are close to zero in terms of "in the moneyness."

(5) The mortality rate is based on the 2012 Individual Annuity Mortality Basic table with mortality improvements.

The following table presents the unobservable inputs for Level 3 fair value measurements as of December 31, 2014:

	Range(1)		
Unobservable Input	**GMWB / GMWBL**	**GMAB**	**FIA**
Long-term equity implied volatility	15% to 25%	15% to 25%	-
Interest rate implied volatility	0.2% to 16% &bbsp;	0.2% to 16%	-
Correlations between:			
Equity Funds	49% to 98%	49% to 98%	-
Equity and Fixed Income Funds	-38% to 62%	-38% to 62%	-
Interest Rates and Equity Funds	-32% to -4%	-32% to -4%	-
Nonperformance risk	0.13% to 1.1%	0.13% to 1.1%	0.13% to 1.1%
Actuarial Assumptions:			
Benefit Utilization	85% to 100% (2)	-	-
Partial Withdrawals	0% to 10%	0% to 10%	0% to 5%
Lapses	0.08% to 24% (3)(4)	0.08% to 31% (3)(4)	0% to 60% (3)
Mortality	- (5)	- (5)	- (6)

(1) Represents the range of reasonable assumptions that management has used in its fair value calculations.

(2) Those policyholders who have elected systematic withdrawals are assumed to continue taking withdrawals. As a percent of account value, 33% are taking systematic withdrawals. Of those policyholders who are not taking withdrawals, the Company assumes that 85% will begin systematic withdrawals after a delay period. The utilization function varies by policyholder age and policy duration. Interactions with lapse and mortality also affect utilization. The utilization rate for GMWB and GMWBL tends to be lower for younger contract owners and contracts that have not reached their maximum accumulated GMWB and GMWBL benefit amount. There is also a lower utilization rate, though indirectly, for contracts that are less "in the money" (i.e., where the notional benefit amount is in excess of the account value) due to higher lapses. Conversely, the utilization rate tends to be higher for contract owners near or beyond retirement age and contracts that have accumulated their maximum GMWB or GMWBL benefit amount. There is also a higher utilization rate, though indirectly, for contracts which are highly "in the money". The chart below provides the GMWBL account value by current age group and average expected delay times from the associated attained age group as of December 31, 2014 (account value amounts are in $ billions).

	Account Values			
Attained Age Group	In the Money	Out of the Money	Total	Average Expected Delay (Years)*
< 60	$ 2.4	$ 0.5	$ 2.9	9.5
60-69	6.1	0.9	7.0	4.9
70+	5.0	0.5	5.5	3.1
	$ 13.5	$ 1.9	$ 15.4	5.8

* For population expected to withdraw in future. Excludes policies taking systematic withdraws and 15% of policies the Company assumes will never withdraw.

[3] Lapse rates tend to be lower during the contractual surrender charge period and higher after the surrender charge period ends; the highest lapse rates occur in the year immediately after the end of the surrender charge period.

[4] The Company makes dynamic adjustments to lower the lapse rates for contracts that are more "in the money." The table below shows an analysis of policy account values according to whether they are in or out of the surrender charge period and to whether they are "in the money" or "out of the money" as of December 31, 2014 (account value amounts are in $ billions).

		GMAB		GMWB/GMWBL	
	Moneyness	Account Value	Lapse Range	Account Value	Lapse Range
During Surrender Charge Period					
	In the Money**	$ - *	0.08% to 8.2%	$ 6.5	0.08% to 6.3%
	Out of the Money	- *	0.41% to 12%	1.1	0.36% to 7%
After Surrender Charge Period					
	In the Money**	$ - *	2.5% to 21%	$ 7.2	1.7% to 21%
	Out of the Money	0.1	12.3% to 31%	1.4	5.6% to 24%

* Less than $0.1.

** The low end of the range corresponds to policies that are highly "in the money." The high end of the range corresponds to the policies that are close to zero in terms of "in the moneyness."

[5] The mortality rate is based on the Annuity 2000 Basic table with mortality improvements.

[6] The mortality rate is based on the 2012 Individual Annuity Mortality Basic table with mortality improvements.

Generally, the following will cause an increase (decrease) in the GMAB, GMWB and GMWBL embedded derivative fair value liabilities:

- An increase (decrease) in long-term equity implied volatility
- An increase (decrease) in interest rate implied volatility
- An increase (decrease) in equity-interest rate correlations
- A decrease (increase) in nonperformance risk
- A decrease (increase) in mortality
- An increase (decrease) in benefit utilization
- A decrease (increase) in lapses

Changes in fund correlations may increase or decrease the fair value depending on the direction of the movement and the mix of funds. Changes in partial withdrawals may increase or decrease the fair value depending on the timing and magnitude of withdrawals.

Generally, the following will cause an increase (decrease) in the FIA embedded derivative fair value liability:

- A decrease (increase) in nonperformance risk
- A decrease (increase) in lapses

The Company notes the following interrelationships:

- Higher long-term equity implied volatility is often correlated with lower equity returns, which will result in higher in-the-moneyness, which in turn, results in lower lapses due to the dynamic lapse component reducing the lapses. This increases the projected number of policies that are available to use the GMWBL benefit and may also increase the fair value of the GMWBL.

- Generally, an increase (decrease) in benefit utilization will decrease (increase) lapses for GMWB and GMWBL.

Other Financial Instruments

The carrying values and estimated fair values of the Company's financial instruments as of the dates indicated:

	December 31, 2015		December 31, 2014	
	Carrying Value	Fair Value	Carrying Value	Fair Value
Assets:				
Fixed maturities, including securities pledged	$ 23,678.2	$ 23,678.2	$ 23,277.0	$ 23,277.0
Equity securities, available-for-sale	19.2	19.2	6.7	6.7
Mortgage loans on real estate	3,310.9	3,429.8	2,854.4	2,989.1
Policy loans	79.8	79.8	87.4	87.4
Cash, cash equivalents, short-term investments and short-term investments under securities loan agreements	1,948.6	1,948.6	1,279.3	1,279.3
Derivatives	799.4	799.4	891.4	891.4
Other investments	48.6	48.6	49.4	49.4
Deposits from affiliates	155.3	156.3	806.7	848.3
Embedded derivative on reinsurance	(15.6)	(15.6)	9.6	9.6
Assets held in separate accounts	33,355.5	33,355.5	38,547.7	38,547.7
Liabilities:				
Investment contract liabilities:				
Deferred annuities[(1)]	19,274.7	19,367.9	19,054.6	19,122.0
Funding agreements with fixed maturities and guaranteed investment contracts	1,105.7	1,083.1	1,114.8	1,091.5
Supplementary contracts, immediate annuities and other	1,766.5	1,955.3	1,296.7	1,404.5
Derivatives:				
Guaranteed benefit derivatives:				
FIA	1,779.1	1,779.1	1,924.4	1,924.4
GMAB/GMWB/GMWBL	1,849.0	1,849.0	1,564.4	1,564.4
Other derivatives	204.6	204.6	340.6	340.6
Long-term debt	435.0	524.7	435.0	545.6
Embedded derivative on reinsurance	10.2	10.2	211.0	211.0

[(1)] Certain amounts included in Deferred annuities are also reflected within the Guaranteed benefit derivatives section of the table above.

The following disclosures are made in accordance with the requirements of ASC Topic 825 which requires disclosure of fair value information about financial instruments, whether or not recognized at fair value on the Balance Sheets, for which it is practicable to estimate that value. In cases where quoted market prices are not available, fair values are based on estimates using present value or other valuation techniques. Those techniques are significantly affected by the assumptions used, including the discount rate and estimates of future cash flows. In that regard, the derived fair value estimates, in many cases, could not be realized in immediate settlement of the instrument.

ASC Topic 825 excludes certain financial instruments, including insurance contracts and all nonfinancial instruments from its disclosure requirements. Accordingly, the aggregate fair value amounts presented do not represent the underlying value of the Company.

The following valuation methods and assumptions were used by the Company in estimating the fair value of the following financial instruments, which are not carried at fair value on the Balance Sheets:

Mortgage loans on real estate: The fair values for mortgage loans on real estate are estimated on a monthly basis using discounted cash flow analyses and rates currently being offered in the marketplace for similar loans to borrowers with similar credit ratings. Loans with similar characteristics are aggregated for purposes of the calculations. Mortgage loans on real estate are classified as Level 3.

Policy loans: The fair value of policy loans approximates the carrying value of the loans. Policy loans are collateralized by the cash surrender value of the associated insurance contracts and are classified as Level 2.

Other investments: FHLB stock is carried at cost and periodically evaluated for impairment based on ultimate recovery of par value and is classified as Level 1.

Deposits from affiliates: Fair value is estimated based on the fair value of the liabilities for the underlying contracts, plus the fair value of the unamortized ceding allowance. The Fair value of the liabilities of the underlying contract is estimated based on the mean present value of stochastically modeled cash flows associated with the contract liabilities taking into account assumptions about contract holder behavior. The stochastic valuation scenario set is consistent with current market parameters and discount is taken using stochastically evolving short risk-free rates plus an adjustment for nonperformance risk. Margins for non-financial risks associated with the contract liabilities are also included. The fair value of the unamortized ceding allowance is based on the projected release ceding allowances and discounted at risk-free rates plus an adjustment for nonperformance risk. These liabilities are classified as Level 3.

Investment contract liabilities:

Deferred annuities: Fair value is estimated as the mean present value of stochastically modeled cash flows associated with the contract liabilities, taking into account assumptions about contract holder behavior. The stochastic valuation scenario set is consistent with current market parameters and discount is taken using stochastically evolving risk-free rates in the scenarios plus an adjustment for nonperformance risk. Margins for non-financial risks associated with the contract liabilities are also included. These liabilities are classified as Level 3.

Funding agreements with fixed maturities and guaranteed investment contracts: Fair value is estimated by discounting cash flows, including associated expenses for maintaining the contracts, at rates, that are risk-free rates plus an adjustment for nonperformance risk. These liabilities are classified as Level 2.

Supplementary contracts and immediate annuities: Fair value is estimated as the mean present value of the single deterministically modeled cash flows associated with the contract liabilities discounted using stochastically evolving short risk-free rates in the scenarios plus an adjustment for nonperformance risk. The valuation is consistent with current market parameters. Margins for non-financial risks associated with the contract liabilities are also included. These liabilities are classified as Level 3.

Long-term debt: Estimated fair value of the Company's notes to affiliates is based upon discounted future cash flows using a discount rate approximating the current market rate, incorporating nonperformance risk and is classified as Level 2.

Fair value estimates are made at a specific point in time, based on available market information and judgments about various financial instruments, such as estimates of timing and amounts of future cash flows. Such estimates do not reflect any premium or discount that could result from offering for sale at one time the Company's entire holdings of a particular financial instrument, nor do they consider the tax impact of the realization of unrealized capital gains (losses). In many cases, the fair value estimates cannot be substantiated by comparison to independent markets, nor can the disclosed value be realized in immediate settlement of the instruments. In evaluating the Company's management of interest rate, price and liquidity risks, the fair values of all assets and liabilities should be taken into consideration, not only those presented above.

5. Deferred Policy Acquisition Costs and Value of Business Acquired

The following table presents a rollforward of DAC and VOBA for the periods indicated:

	DAC	VOBA	Total
Balance at January 1, 2013	$ 2,968.2	$ 28.4	$ 2,996.6
Deferrals of commissions and expenses	99.7	-	99.7
Amortization:			
Amortization[2]	(1,681.3)	12.5	(1,668.8)
Interest accrued[1]	143.1	3.3	146.4
Net amortization included in the Statements of Operations	(1,538.2)	15.8	(1,522.4)
Change in unrealized capital gains/losses on available-for-sale securities	742.0	14.4	756.4
Balance as of December 31, 2013	2,271.7	58.6	2,330.3
Deferrals of commissions and expenses	118.2	-	118.2
Amortization:			
Amortization	24.4	(12.2)	12.2
Interest accrued[1]	100.5	3.3	103.8
Net amortization included in the Statements of Operations	124.9	(8.9)	116.0
Change in unrealized capital gains/losses on available-for-sale securities	(301.9)	(10.6)	(312.5)
Balance as of December 31, 2014	2,212.9	39.1	2,252.0
Deferrals of commissions and expenses	115.3	-	115.3
Amortization:			
Amortization[2]	(688.2)	(17.2)	(705.4)
Interest accrued[1]	35.8	2.6	38.4
Net amortization included in the Statements of Operations	(652.4)	(14.6)	(667.0)
Change in unrealized capital gains/losses on available-for-sale securities	424.4	20.1	444.5
Balance as of December 31, 2015	$ 2,100.2	$ 44.6	$ 2,144.8

[1] Interest accrued at the following rates for VOBA: 2.2% to 5.8% during 2015, 2.0% to 5.8% during 2014 and 1.0% to 6.0% during 2013.
[2] Includes loss recognition for DAC and VOBA of $275.7 and $1.2, respectively, during 2015 and loss recognition for DAC and VOBA of $305.0 and $1.0, respectively, during 2013. There was no loss recognition for DAC and VOBA during 2014.

The estimated amount of VOBA amortization expense, net of interest, for the next five years is presented in the following table. Actual amortization incurred during these years may vary as assumptions are modified to incorporate actual results and/or changes in best estimates of future results.

Year	Amount
2016	$ 8.4
2017	7.5
2018	6.4
2019	6.4
2020	6.4

6. Sales Inducements

During the years ended December 31, 2015, 2014 and 2013, the Company capitalized $22.0, $28.4 and $27.4, respectively, of Sales inducements to contract owners. During the years ended December 31, 2015, 2014 and 2013, the Company amortized $(109.8), $(19.3) and $(472.0), respectively, of Sales inducements to contract owners. The unamortized balance of capitalized Sales inducements to contract owners was $431.6 and $431.3 as of December 31, 2015 and 2014, respectively. Loss recognition related to Sales inducements to contract owners for the years ended December 31, 2015 and 2013 was $65.1 and $44.8, respectively. The Company had no loss recognition related to Sales inducements to contract owners for the year ended December 31, 2014.

7. Guaranteed Benefit Features

While the Company stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010, its currently-sold retail variable annuity contracts with separate account options guarantee the contract owner a return of no less than (i) total deposits made to the contract less any partial withdrawals, (ii) total deposits made to the contract less any partial withdrawals plus a minimum return, or (iii) the highest contract value on a specified date minus any withdrawals. These guarantees include benefits that are payable in the event of death, annuitization or at specified dates.

The Company also has certain indexed annuity products which contain guaranteed withdrawal benefit provisions. This provision guarantees an annual withdrawal amount for life that is calculated as a percentage of the benefit base, which equals premium paid at the time of product issue, and can increase by a rollup percentage (mainly 7%, 6% or a percentage linked to index credits earned, depending on versions of the benefit) or annual ratchet. The percentage used to determine the guaranteed annual withdrawal amount may vary by age at first withdrawal and depends on whether the benefit is for a single life or joint lives.

The Company’s major source of income from guaranteed benefit features is the base contract mortality, expense, and guaranteed death and living benefit rider fees charged to the contract owner, less the costs of administering the product and providing for the guaranteed death and living benefits.

The Company's closed block of variable annuity contracts offer one or more of the following guaranteed death and living benefits:

Guaranteed Minimum Death Benefits (GMDB)

- *Standard*: Guarantees that, upon the death of the individual specified in the policy, the death benefit will be no less than the premiums paid by the customer, adjusted for withdrawals.
- *Ratchet*: Guarantees that, upon the death of the individual specified in the policy, the death benefit will be no less than the greater of (1) Standard or (2) the maximum policy anniversary (or quarterly) value of the variable annuity, adjusted for withdrawals.
- *Rollup*: Guarantees that, upon the death of the individual specified in the policy, the death benefit will be no less than the aggregate premiums paid by the contract owner, with interest at the contractual rate per annum, adjusted for withdrawals. The Rollup may be subject to a maximum cap on the total benefit.
- *Combo*: Guarantees that, upon the death of the individual specified in the policy, the death benefit will be no less than the greater of (1) Ratchet or (2) Rollup.

Guaranteed Minimum Living Benefits

Guaranteed Minimum Income Benefit (GMIB): Guarantees a minimum income payout, exercisable only on a contract anniversary on or after a specified date, in most cases 10 years after purchase of the GMIB rider. The income payout is determined based on contractually established annuity factors multiplied by the benefit base. The benefit base equals the premium paid at the time of product issue and may increase over time based on a number of factors, including a rollup percentage (mainly 7% or 6% depending on the version of the benefit) and ratchet frequency subject to maximum caps which vary by product version (200%, 250% or 300% of initial premium).

Guaranteed Minimum Withdrawal Benefit and Guaranteed Minimum Withdrawal Benefit for Life (GMWB/GMWBL): Guarantees an annual withdrawal amount for a specified period of time (GMWB) or life (GMWBL) that is calculated as a percentage of the benefit base that equals premium paid at the time of product issue and may increase over time based on a number of factors, including a rollup percentage (mainly 7%, 6% or 0%, depending on versions of the benefit) and ratchet frequency (primarily annually or quarterly, depending on versions). The percentage used to determine the guaranteed annual withdrawal amount may vary by age at first withdrawal and depends on versions of the benefit. A joint life-time withdrawal benefit option was available to include coverage for spouses. Most versions of the withdrawal benefit included reset and/or step-up features that may increase the guaranteed withdrawal amount in certain conditions. Earlier versions of the withdrawal benefit guarantee that annual withdrawals of up to 7.0% of eligible premiums may be made until eligible premiums previously paid by the contract owner are returned, regardless of account value performance. Asset allocation requirements apply at all times where withdrawals are guaranteed for life.

Guaranteed Minimum Accumulation Benefit (GMAB): Guarantees that the account value will be at least 100% of the eligible premiums paid by the customer after 10 years, adjusted for withdrawals. The Company offered an alternative design that guaranteed the account value to be at least 200% of the eligible premiums paid by contract owners after 20 years.

The following assumptions and methodology were used to determine the guaranteed reserves for closed block of variable annuity contracts as of December 31, 2015 and 2014:

Area	Assumptions/Basis for Assumptions
Data used	Based on 1,000 investment performance scenarios.
Mean investment performance	GMDB: The mean investment performance varies by fund group. In general, the Company groups all separate account returns into 6 fund groups and generate stochastic returns for each of these fund groups. The overall mean blended separate account return is 8.1%. The general account fixed portion is a small percentage of the overall total. GMIB: The overall blended mean is 8.1% based on a single fund group. GMAB / GMWB / GMWBL: Zero rate curve.
Volatility	GMDB: 15.1% for 2015 and 15.8% for 2014. GMIB: 15.1% for 2015 and 15.8% for 2014. GMAB / GMWB / GMWBL: Implied volatilities through the first 5 years and then a blend of implied and historical thereafter.
Mortality	Depending on the type of benefit and gender, the Company uses the 2012 Individual Annuity Mortality Basic table with mortality improvement as of December 31, 2015 and the Annuity 2000 Basic table with mortality improvement as of December 31, 2014, further adjusted for company experience.
Lapse rates	Vary by contract type, share class, time remaining in the surrender charge period and in-the-moneyness.
Discount rates	GMDB / GMIB: 5.5% for 2015 and 2014. GMAB / GMWB / GMWBL: Zero rate curve plus adjustment for nonperformance risk.

Variable annuity contracts containing guaranteed minimum death and living benefits expose the Company to equity risk. With a decline in the equity markets, the Company has exposure to increasing claims due to the guaranteed minimum benefits. On the other hand, with an increase in the equity markets, the Company's exposure to risks associated with the guaranteed minimum benefits generally decreases. In order to mitigate the risk associated with guaranteed death and living benefits, the Company enters into reinsurance agreements and derivative positions on various public market indices chosen to closely replicate contract owner variable fund returns.

The calculation of the GMDB, GMIB, GMAB, GMWB, and GMWBL liabilities assumes dynamic surrenders and dynamic utilization of the guaranteed living benefit feature.

The liabilities for variable annuity contracts containing guaranteed minimum death and living benefits are recorded in separate account liabilities as follows as of December 31, 2015 and 2014. The separate account liabilities may include more than one type of guarantee. These liabilities are subject to the requirements for additional reserve liabilities under ASC Topic 944, which are recorded on the Balance Sheets in Future policy benefits and contract owner account balances. The paid and incurred amounts were as follows for the years ended December 31, 2015, 2014 and 2013:

	GMDB[1]	GMAB/GMWB	GMIB[2]	GMWBL[3]
Separate account liability at December 31, 2015	$ 33,321.3	$ 593.5	$ 11,338.1	$ 13,811.4
Separate account liability at December 31, 2014	$ 38,547.7	$ 728.9	$ 13,618.4	$ 15,444.4
Additional liability balance:				
Balance at January 1, 2013	$ 488.0	$ 76.0	$ -	$ 1,511.8
Incurred guaranteed benefits	(59.8)	(46.8)	-	(1,097.8)
Paid guaranteed benefits	(89.2)	(0.5)	-	-
Balance at December 31, 2013	339.0	28.7	-	414.0
Incurred guaranteed benefits	108.6	4.8	-	631.5
Paid guaranteed benefits	(73.3)	(0.7)	-	-
Balance at December 31, 2014	374.3	32.8	-	1,045.5
Incurred guaranteed benefits	231.4	(3.1)	-	200.5
Paid guaranteed benefits	(88.5)	(0.6)	-	-
Balance at December 31, 2015	$ 517.2	$ 29.1	$ -	$ 1,246.0

[1] The additional liability balances as of December 31, 2015, 2014, 2013 and as of January 1, 2013 are presented net of reinsurance of $32.8, $30.8, $33.2 and $143.1, respectively.
[2] The additional liability balances as of December 31, 2015, 2014, 2013 and as of January 1, 2013 are presented net of reinsurance of $1.4 billion, $1.1 billion, $1.1 billion and $1.2 billion, respectively.
[3] The additional liability balances as of December 31, 2015, 2014, 2013 and as of January 1, 2013 are presented net of reinsurance of $573.9, $486.1, $458.3 and $416.3, respectively.

The Company also calculates additional liabilities for FIA contracts with guaranteed withdrawal benefits. The additional liability represents the expected value of these benefits in excess of the projected account balance, and is accreted based on assessments over the accumulation period of the contract. The additional liability for FIA guaranteed withdrawal benefits was $91.0 and $19.7, as of December 31, 2015 and 2014, respectively. The additional liability is recorded in Future policy benefits and contract owner account balances on the Balance Sheets.

The net amount at risk for the GMDB, GMAB and GMWB benefits is equal to the guaranteed value of these benefits in excess of the account values.

The net amount at risk for the GMIB and GMWBL benefits is equal to the excess of the present value of the minimum guaranteed annuity payments available to the contract owner over the current account value.

The separate account values, net amount at risk, net of reinsurance, and the weighted average attained age of contract owners by type of minimum guaranteed benefit, were as follows as of the dates indicated.

	In the Event of Death	At Annuitization, Maturity, or Withdrawal		
	GMDB	GMAB/GMWB	GMIB	GMWBL
December 31, 2015				
Separate account value	$ 33,321.3	$ 593.5	$ 11,338.1	$ 13,811.4
Net amount at risk, net of reinsurance	$ 6,073.6	$ 17.2	$ -	$ -
Weighted average attained age	70	72	-	-
December 31, 2014				
Separate account value	$ 38,547.7	$ 728.9	$ 13,618.4	$ 15,444.4
Net amount at risk, net of reinsurance	$ 4,982.0	$ 15.4	$ -	$ -
Weighted average attained age	70	72	-	-

The aggregate fair value of equity securities, including mutual funds, supporting separate accounts with additional insurance benefits and minimum investment return guarantees as of December 31, 2015 and 2014 was $33.3 billion and $38.5 billion, respectively.

8. Reinsurance

The Company has reinsurance treaties with 14 unaffiliated reinsurers covering a portion of the mortality risks and guaranteed death and living benefits under its life and annuity contracts. The Company, as cedant, also has reinsurance treaties with two affiliates, SLD and SLDI, related to GICs, fixed annuities, variable annuities and universal life insurance policies. In addition, the Company assumed reinsurance risk under reinsurance treaties with its affiliates, ReliaStar Life Insurance Company ("RLI") and SLD related to certain life insurance policies and employee benefit group annual term policies. The Company remains liable to the extent its reinsurers do not meet their obligations under the reinsurance agreements. Furthermore, the Company has an agreement with SLD which is accounted for using the deposit method. For additional information regarding these transactions with affiliates, see the *Related Party Transactions* Note for further detail.

Deposits and reinsurance recoverable was comprised of the following as of the dates indicated:

	December 31,	
	2015	2014
Claims recoverable	$ 10.3	$ 8.7
Reserves ceded [(1)]	5,085.5	3,748.0
Deposits [(1)]	155.3	806.7
Reinsurance receivable, net [(1)]	386.7	396.3
Other	8.1	9.3
Total	$ 5,645.9	$ 4,969.0

[(1)] Includes amounts with affiliates - refer to the *Related Party Transactions* Note for further detail.

The following table summarizes the effect of reinsurance on Premiums for the periods indicated:

	December 31,		
	2015	2014	2013
Premiums:			
Direct premiums	$ 482.7	$ 634.2	$ 95.2
Reinsurance assumed [1]	428.5	407.7	454.9
Reinsurance ceded [1]	(405.4)	(504.1)	(113.8)
Net premiums	$ 505.8	$ 537.8	$ 436.3

9. Capital Contributions, Dividends and Statutory Information

Iowa insurance law imposes restrictions on an Iowa insurance company's ability to pay dividends to its parent. These restrictions are based in part on the prior year's statutory income and surplus. In general, dividends up to specified levels are considered ordinary and may be paid without prior approval. Dividends in larger amounts, or extraordinary dividends, are subject to approval by the Iowa Insurance Commission.

Under Iowa law, an extraordinary dividend or distribution is defined as a dividend or distribution that, together with other dividends or distributions made within the preceding twelve months, exceeds the greater of (1) ten percent (10.0%) of the Company's earned statutory surplus at the prior year end or (2) the Company's prior year statutory net gain from operations. Iowa law also prohibits an Iowa insurer from declaring or paying a dividend except out of its earned surplus unless prior insurance regulatory approval is obtained.

During the year ended December 31, 2015, the Company declared an ordinary dividend to its Parent in the amount of $394.0, which was paid to its Parent on May 20, 2015. During the year ended December 31, 2014, the Company paid an ordinary dividend in the amount of $216.0 to its Parent.

During the year ended December 31, 2015, the Company declared an extraordinary distribution in the amount of $98.0, subject to receipt of approval by the Iowa Insurance Division. The Iowa Insurance Division provided its approval on June 25, 2015, and the Company paid the extraordinary distribution to its Parent on June 26, 2015.

During the years ended December 31, 2015, and 2014, the Company did not receive any capital contributions from its Parent.

The Company is subject to minimum risk-based capital ("RBC") requirements established by the Division. The formulas for determining the amount of RBC specify various weighting factors that are applied to financial balances or various levels of activity based on the perceived degree of risk. Regulatory compliance is determined by a ratio of total adjusted capital ("TAC"), as defined by the National Association of Insurance Commissioners ("NAIC"), to authorized control level RBC, as defined by the NAIC. The Company exceeded the minimum RBC requirements that would require any regulatory or corrective action for all periods presented herein.

The Company is required to prepare statutory financial statements in accordance with statutory accounting practices prescribed or permitted by the Division. Such statutory accounting practices primarily differ from U.S. GAAP by charging policy acquisition costs to expense as incurred, establishing future policy benefit liabilities and contract owner account balances using different actuarial assumptions as well as valuing investments and certain assets and accounting for deferred taxes on a different basis. Certain assets that are not admitted under statutory accounting principles are charged directly to surplus. Depending on the regulations of the Division, the entire amount or a portion of an insurance company's asset balance can be non-admitted depending on specific rules regarding admissibility. The most significant non-admitted assets of the Company are typically deferred tax assets.

Statutory net income (loss) was $553.3, $335.6 and $(55.8), for the years ended December 31, 2015, 2014 and 2013, respectively. Statutory capital and surplus was $2.1 billion as of December 31, 2015 and 2014.

10. Accumulated Other Comprehensive Income (Loss)

Shareholder's equity included the following components of AOCI as of the dates indicated:

	December 31,		
	2015	**2014**	**2013**
Fixed maturities, net of OTTI	$ 406.8	$ 1,388.5	$ 827.5
Equity securities, available-for-sale	3.8	3.6	2.3
Derivatives	11.8	7.6	0.4
DAC/VOBA and Sales inducements adjustments on available-for-sale securities	(181.3)	(714.0)	(341.5)
Other	(35.9)	(35.5)	(35.3)

11. Income Taxes

Income tax expense (benefit) consisted of the following for the periods indicated:

	Year Ended December 31,		
	2015	2014	2013
Current tax expense (benefit):			
Federal	$ (68.5)	$ 69.9	$ 187.4
Total current tax expense (benefit)	(68.5)	69.9	187.4
Deferred tax expense (benefit):			
Federal	14.6	27.4	(1.9)
Total deferred tax expense (benefit)	14.6	27.4	(1.9)
Total income tax expense (benefit)	$ (53.9)	$ 97.3	$ 185.5

Income taxes were different from the amount computed by applying the federal income tax rate to Income (loss) before income taxes for the following reasons for the periods indicated:

	Year Ended December 31,		
	2015	**2014**	**2013**
Income (loss) before income taxes	$ (79.0)	$ 72.4	$ 168.6
Tax rate	35.0%	35.0%	35.0%
Income tax expense (benefit) at federal statutory rate	(27.7)	25.3	59.0
Tax effect of:			
Dividends received deduction	(76.3)	(58.6)	(84.0)
Valuation allowance	47.7	125.8	203.6
Audit settlements	-	2.8	-
Tax credits	2.3	2.0	(0.4)
Prior year tax	-	-	7.2
Non-deductible expense (benefit)	0.1	0.2	-
Other	-	(0.2)	0.1
Income tax expense (benefit)	$ (53.9)	$ 97.3	$ 185.5
Effective tax rate	68.2%	134.4%	110.0%

Temporary Differences

The tax effects of temporary differences that give rise to deferred tax assets and deferred tax liabilities as of the dates indicated, are presented below.

	Year Ended December 31,	
	2015	**2014**
Deferred tax assets		
Insurance reserves	$ 759.0	$ 774.9
Investments	867.9	997.7
Compensation and benefits	21.7	48.1
Other assets	21.6	24.2
Total gross assets before valuation allowance	1,670.2	1,844.9
Less: Valuation allowance	597.4	549.7
Assets, net of valuation allowance	1,072.8	1,295.2
Deferred tax liabilities		
Deferred policy acquisition costs	(842.7)	(862.6)
Net unrealized investment (gains) losses	(135.3)	(477.5)
Total gross liabilities	(978.0)	(1,340.1)
Net deferred income tax asset (liability)	$ 94.8	$ (44.9)

Valuation allowances are provided when it is considered unlikely that deferred tax assets will be realized. As of December 31, 2015 and 2014, the Company had total valuation allowances of $597.4 and $549.7, respectively. As of December 31, 2015 and 2014, $783.1 and $735.4, respectively, of these valuation allowances were allocated to continuing operations, and $(185.7) of these valuation allowances were allocated to Other comprehensive income (loss) related to realized and unrealized capital losses.

For the years ended December 31, 2015, 2014 and 2013, the increases in the valuation allowance were $47.7, $125.8 and $203.6, respectively, all of which were allocated to continuing operations.

Tax Sharing Agreement

The Company had a payable to Voya Financial, Inc. of $27.6 as of December 31, 2015 and a payable to Voya Financial, Inc. of $2.1 as of December 31, 2014, for federal income taxes under the intercompany tax sharing agreement.

The results of the Company's operations are included in the consolidated tax return of Voya Financial, Inc. Generally, the Company's financial statements recognize the current and deferred income tax consequences that result from the Company's activities during the current and preceding periods pursuant to the provisions of Income Taxes (ASC Topic 740) as if the Company were a separate taxpayer rather than a member of Voya Financial, Inc.'s consolidated income tax return group with the exception of any net operating loss carryforwards and capital loss carryforwards, which are recorded pursuant to the tax sharing agreement. If the Company instead were to follow a separate taxpayer approach without any exceptions, there would be no impact to income tax expense (benefit) for the periods indicated above. Also, any current tax benefit related to the Company's tax attributes realized by virtue of its inclusion in the consolidated tax return of Voya Financial, Inc. would have been recorded directly to equity rather than income. Under the tax sharing agreement, Voya Financial, Inc. will pay the Company for the tax benefits of ordinary and capital losses only in the event that the consolidated tax group actually uses the tax benefit of losses generated.

Unrecognized Tax Benefits

Reconciliations of the change in the unrecognized income tax benefits for the periods indicated are as follows:

	Year Ended December 31,		
	2015	2014	2013
Balance at beginning of period	$ 5.5	$ 2.7	$ 2.7
Additions for tax positions related to prior years	-	2.8	-
Balance at end of period	$ 5.5	$ 5.5	$ 2.7

The Company had $5.5, $5.5 and $2.7, respectively, of unrecognized tax benefits as of December 31, 2015, 2014 and 2013, which would affect the Company's effective tax rate if recognized.

Interest and Penalties

The Company recognizes accrued interest and penalties related to unrecognized tax benefits in current income taxes and income tax expense on the Balance Sheets and Statement of Operations, respectively. The Company had no accrued interest as of December 31, 2015 and 2014.

Tax Regulatory Matters

During April 2015, the Internal Revenue Service ("IRS") completed its examination of Voya Financial, Inc.'s consolidated return (including the Company) through tax year 2013. The 2013 audit settlement did not have a material impact on the Company. Voya Financial, Inc. (including the Company) is currently under audit by the IRS, and it is expected that the examination of tax year 2014 will be finalized within the next twelve months. Voya Financial, Inc. (including the Company) and the IRS have agreed to participate in the Compliance Assurance Process for the tax years 2014 through 2016.

The IRS issued a Directive dated July 17, 2014 that it should not challenge the qualification of certain hedges and should not challenge certain tax accounting methods. The Company does not expect this Directive to have a material impact on the Company.

The Company does not expect any material changes in the amount of the unrecognized tax benefit of $5.5 within the next twelve months. The timing of a payment (if any) associated with the unrecognized tax benefit cannot be reliably estimated.

12. Benefit Plans

Defined Benefit Plan

Voya Services Company sponsors the Voya Retirement Plan (the "Retirement Plan"). Substantially all employees of Voya Services Company and its affiliates (excluding certain employees) are eligible to participate, including the Company's employees.

The Retirement Plan is a tax qualified defined benefit plan, the benefits of which are guaranteed (within certain specified legal limits) by the Pension Benefit Guaranty Corporation ("PBGC"). Beginning January 1, 2012, the Retirement Plan adopted a cash balance pension formula instead of a final average pay ("FAP") formula, allowing all eligible employees to participate in the Retirement Plan. Participants will earn an annual credit equal to 4% of eligible compensation. Interest is credited monthly based on a 30-year U.S. Treasury securities bond rate published by the Internal Revenue Service in the preceding August of each year. The accrued vested cash pension balance benefit is portable; participants can take it if they leave the Company. For participants in the Retirement Plan as of December 31, 2011, there was a two-year transition period from the Retirement Plan's current FAP formula to the cash balance pension formula which ended December 31, 2013.

The costs allocated to the Company for its employees' participation in the Retirement Plan were $1.7, $2.1 and $2.3, for the years ended December 31, 2015, 2014 and 2013, respectively, and are included in Operating expenses in the Statements of Operations.

Defined Contribution Plan

Voya Services Company sponsors the Voya Savings Plan and ESOP (the "Savings Plan"). Substantially all employees of Voya Services Company and its affiliates (excluding certain employees) are eligible to participate, including the Company's employees other than Company agents. The Savings Plan is a tax qualified defined contribution and stock bonus plan, which includes an employee stock ownership plan component. Savings Plan benefits are not guaranteed by the PBGC. The Savings Plan allows eligible participants to defer into the Savings Plan a specified percentage of eligible compensation on a pretax basis. Voya Services Company matches such pre-tax contributions, up to a maximum of 6.0% of eligible compensation, subject to IRS limits. Matching contributions are subject to a 4-year graded vesting schedule. Contributions made to the Savings Plan are subject to certain limits imposed by applicable law. The cost allocated to the Company for the Savings Plan were $3.0, $3.3 and $3.6, for the years ended December 31, 2015, 2014 and 2013, respectively, and are included in Operating expenses in the Statements of Operations.

Non-Qualified Retirement Plans

Effective December 31, 2001, the Company, in conjunction with Voya Services Company, offers certain eligible employees (other than Career Agents) a Supplemental Executive Retirement Plan and an Excess Plan (collectively, the "SERPs"). Benefits under the SERPs are determined based on an eligible employee's years of service and average annual compensation for the highest five years during the last ten years of employment.

Effective January 1, 2012, the Supplemental Executive Retirement Plan was amended to coordinate with the amendment of the Retirement Plan from its current final average pay formula to a cash balance formula.

The SERPs are non-qualified defined benefit pension plans, which means all the SERPs benefits are payable from the general assets of the Company. These non-qualified defined benefit pension plans are not guaranteed by the PBGC.

Obligations and Funded Status

The following table summarizes the benefit obligations for the SERPs as of December 31, 2015 and 2014:

	Year Ended December 31,	
	2015	2014
Change in benefit obligation:		
Benefit obligation, January 1	$ 23.5	$ 19.9
Interest cost	1.0	1.0
Benefits paid	(1.7)	(1.3)
Actuarial (gains) losses on obligation	(1.2)	3.9
Benefit obligation, December 31	$ 21.6	$ 23.5

Amounts recognized on the Balance Sheets in Other liabilities and in AOCI were as follows as of December 31, 2015 and 2014:

	December 31,	
	2015	2014
Accrued benefit cost	$ (21.6)	$ (23.5)
Accumulated other comprehensive income (loss):		
Prior service cost (credit)	(0.1)	(0.2)
Net amount recognized	$ (21.7)	$ (23.7)

Assumptions

The weighted-average assumptions used in the measurement of the December 31, 2015 and 2014, benefit obligation for the SERPs were as follows:

	December 31,	
	2015	2014
Discount rate	4.81%	4.36%
Rate of compensation increase	4.00%	4.00%

In determining the discount rate assumption, the Company utilizes current market information provided by its plan actuaries, including a discounted cash flow analysis of the Company's pension obligation and general movements in the current market environment. The discount rate modeling process involves selecting a portfolio of high quality, noncallable bonds that will match the cash flows of the SERP. Based upon all available information, it was determined that 4.81% was the appropriate discount rate as of December 31, 2015, to calculate the Company's accrued benefit liability.

The weighted-average assumptions used in calculating the net pension cost were as follows:

	2015	2014	2013
Discount rate	4.36%	4.95%	4.05%
Rate of compensation increase	4.00%	4.00%	4.00%

Since the benefit plans of the Company are unfunded, an assumption for return on plan assets is not required.

Net Periodic Benefit Costs

Net periodic benefit costs for the SERPs were as follows for the years ended December 31, 2015, 2014 and 2013:

	Year Ended December 31,		
	2015	**2014**	**2013**
Interest cost	$ 1.0	$ 1.0	$ 0.9
Amortization of prior service cost (credit)	-	-	-
Net (gain) loss recognition	(1.2)	3.9	(4.6)
Net periodic (benefit) cost	$ (0.2)	$ 4.9	$ (3.7)

Cash Flows

In 2016, the Company is expected to contribute $1.1 to the SERPs. Future expected benefit payments related to the SERPs for the years ended December 31, 2016 through 2020, and thereafter through 2025, are estimated to be $1.1, $1.1, $1.2, $1.2, $1.2 and $6.7, respectively.

Share Based Compensation Plans

Certain employees of the Company participate in the 2013 and 2014 Omnibus Employee Incentive Plans ("the Omnibus Plans") sponsored by Voya Financial, Inc., with respect to awards granted in 2013 through 2015. Certain employees also participate in various ING Group share-based compensation plans with respect to awards granted prior to 2013. Upon closing of the IPO, certain awards granted by ING Group that, upon vesting, would have been issuable in the form of American Depository Receipts ("ADRs") of ING Group were converted into performance shares or restricted stock units ("RSUs") under the Omnibus Plans, that upon vesting, will be issuable in Voya Financial, Inc. common stock.

The Company was allocated compensation expense from Voya Financial, Inc. and ING Group of $12.0, $14.4 and $9.7, for the years ended December 31, 2015, 2014 and 2013, respectively.

The Company recognized tax benefits of $5.6, $5.1 and $1.2 in December 31, 2015, 2014 and 2013, respectively. Excess tax benefits are recognized in Additional paid-in capital and are accounted for in a single pool available to all share-based compensation awards. Excess tax benefits in Additional paid-in capital are not recognized until the benefits result in a reduction in taxes payable. The Company uses tax law ordering when determining when excess tax benefits have been realized.

Other Benefit Plans

In addition to providing retirement plan benefits, the Company, in conjunction with Voya Services Company, provides certain supplemental retirement benefits to eligible employees and health care and life insurance benefits to retired employees and other eligible dependents. The supplemental retirement plan includes a non-qualified defined benefit pension plan and a non-qualified defined contribution plan, which means all benefits are payable from the general assets of the Company. The postretirement health care plan is contributory, with retiree contribution levels adjusted annually and the Company subsidizes a portion of the monthly per-participant premium. Beginning August 1, 2009, the Company moved from self-insuring its supplemental health care costs and began to use a private-fee-for-service Medicare Advantage program for post-Medicare eligible retired participants. In addition, effective October 1, 2009, the Company no longer subsidizes medical premium costs for early retirees. This change does not impact any participant currently retired and receiving coverage under the plan or any employee who is eligible for coverage under the plan and whose employment ended before October 1, 2009. The Company continues to offer access to medical coverage until retirees become eligible for Medicare. The life insurance plan provides a flat amount of noncontributory coverage and optional contributory coverage. The Voya Financial, Inc. Deferred Compensation Savings Plan is a non-qualified deferred compensation plan that includes a 401(k) excess component. The benefits charges allocated to the Company related to all of these plans for the years ended December 31, 2015, 2014 and 2013, were $3.5, $3.6 and $3.8, respectively.

13. Commitments and Contingencies

Leases

The Company leases its office space and certain equipment under operating leases, the longest term of which expires in 2017.

For the years ended December 31, 2015, 2014 and 2013, rent expense for leases was $5.4, $7.1 and $6.8, respectively. The future net minimum payments under non-cancellable leases for the years ended December 31, 2016 and 2017 are estimated to be $7.0 and $5.3, respectively, and none thereafter, totaling $12.3. Lease expenses not paid directly by the Company were paid for by an affiliate and allocated to the Company.

Commitments

Through the normal course of investment operations, the Company commits to either purchase or sell securities, mortgage loans, or money market instruments, at a specified future date and at a specified price or yield. The inability of counterparties to honor these commitments may result in either a higher or lower replacement cost. Also, there is likely to be a change in the value of the securities underlying the commitments.

As of December 31, 2015 and 2014, the Company had off-balance sheet commitments to acquire mortgage loans of $323.6 and $156.6, respectively, and purchase limited partnerships and private placement investments of $285.9 and $57.5, respectively.

Federal Home Loan Bank Funding

The Company is a member of the FHLB of Des Moines and is required to maintain collateral to back funding agreements issued to the FHLB. As of December 31, 2015 and 2014, the Company had $950.4 and $950.1, respectively, in non-putable funding agreements, including accrued interest, issued to the FHLB. These non-putable funding agreements are included in Future policy benefits and contract owner account balances on the Balance Sheets. As of December 31, 2015 and 2014, assets with a market value of $1.1 billion collateralized the funding agreements to the FHLB. Assets pledged to the FHLB are included in Fixed maturities, available-for-sale, on the Balance Sheets.

Restricted Assets

The Company is required to maintain assets on deposit with various regulatory authorities to support its insurance operations. The Company may also post collateral in connection with certain securities lending, repurchase agreements, funding agreements, letter of credit ("LOC") and derivative transactions as described further in this note. The components of the fair value of the restricted assets were as follows as of the dates indicated:

	December 31,	
	2015	2014
Fixed maturity collateral pledged to FHLB	$ 1,096.0	$ 1,119.8
FHLB restricted stock[1]	48.0	48.0
Other fixed maturities-state deposits	11.5	11.4
Securities pledged[2]	672.4	626.8
Total restricted assets	$ 1,827.9	$ 1,806.0

[1] Reported in Other investments on the Balance Sheets.
[2] Includes the fair value of loaned securities of $147.9 and $121.2 as of December 31, 2015 and 2014, respectively. In addition, as of December 31, 2015 and 2014, the Company delivered securities as collateral of $524.5 and $505.6, respectively. Loaned securities and securities delivered as collateral are included in Securities pledged on the Balance Sheets.

Litigation, Regulatory Matters and Loss Contingencies

Litigation, regulatory and other loss contingencies arise in connection with the Company's activities as a diversified financial services firm. The Company is a defendant in a number of litigation matters arising from the conduct of its business, both in the

ordinary course and otherwise. In some of these matters, claimants seek to recover very large or indeterminate amounts, including compensatory, punitive, treble and exemplary damages. Modern pleading practice in the U.S. permits considerable variation in the assertion of monetary damages and other relief. Claimants are not always required to specify the monetary damages they seek or they may be required only to state an amount sufficient to meet a court's jurisdictional requirements. Moreover, some jurisdictions allow claimants to allege monetary damages that far exceed any reasonably possible verdict. The variability in pleading requirements and past experience demonstrates that the monetary and other relief that may be requested in a lawsuit or claim often bears little relevance to the merits or potential value of a claim. Litigation against the Company includes a variety of claims including negligence, breach of contract, fraud, violation of regulation or statute, breach of fiduciary duty, negligent misrepresentation, failure to supervise, elder abuse and other torts.

As with other financial services companies, the Company periodically receives informal and formal requests for information from various state and federal governmental agencies and self-regulatory organizations in connection with inquiries and investigations of the products and practices of the Company or the financial services industry. It is the practice of the Company to cooperate fully in these matters. Regulatory investigations, exams, inquiries and audits could result in regulatory action against the Company. The potential outcome of such action is difficult to predict but could subject the Company to adverse consequences, including, but not limited to, settlement payments, additional payments to beneficiaries and additional escheatment of funds deemed abandoned under state laws. They may also result in fines and penalties and changes to the Company's procedures for the identification and escheatment of abandoned property or the correction of processing errors and other financial liability.

The outcome of a litigation or regulatory matter is difficult to predict and the amount or range of potential losses associated with these or other loss contingencies, requires significant management judgment. It is not possible to predict the ultimate outcome or to provide reasonably possible losses or ranges of losses for all pending regulatory matters, litigation, and other loss contingencies. While it is possible that an adverse outcome in certain cases could have a material adverse effect upon the Company's financial position, based on information currently known, management believes that neither the outcome of pending litigation and regulatory matters, nor potential liabilities associated with other loss contingencies, are likely to have such an effect. However, given the large and indeterminate amounts sought in certain litigation and the inherent unpredictability of all such matters, it is possible that an adverse outcome in certain of the Company's litigation or regulatory matters, or liabilities arising from other loss contingencies, could, from time to time, have a material adverse effect upon the Company's results of operations or cash flows in a particular quarterly or annual period.

For some matters, the Company is able to estimate a possible range of loss. For such matters in which a loss is probable, an accrual has been made. For matters where the Company, however, believes a loss is reasonably possible, but not probable, no accrual is required. For matters for which an accrual has been made, but there remains a reasonably possible range of loss in excess of the amounts accrued or for matters where no accrual is required the Company develops an estimate of the unaccrued amounts of the reasonably possible range of losses. As of December 31, 2015, the Company estimates the aggregate range of reasonably possible losses, in excess of any amounts accrued for these matters as of such date, is not material to the Company.

For other matters, the Company is currently not able to estimate the reasonably possible loss or range of loss. The Company is often unable to estimate the possible loss or range of loss until developments in such matters have provided sufficient information to support an assessment of the range of possible loss, such as quantification of a damage demand from plaintiffs, discovery from plaintiffs and other parties, investigation of factual allegations, rulings by a court on motions or appeals, analysis by experts and the progress of settlement discussions. On a quarterly and annual basis, the Company reviews relevant information with respect to litigation and regulatory contingencies and updates the Company's accruals, disclosures and reasonably possible losses or ranges of loss based on such reviews.

14. Related Party Transactions

Operating Agreements

The Company has certain agreements whereby it generates revenues and incurs expenses with affiliated entities. The agreements are as follows:

- Underwriting and distribution agreement with Directed Services LLC ("DSL") (successor by merger to Directed Services, Inc.), an affiliated broker-dealer, whereby DSL serves as the principal underwriter for variable insurance products issued

by the Company. DSL is authorized to enter into agreements with broker-dealers to distribute the Company's variable products and appoint representatives of the broker-dealers as agents. For the years ended December 31, 2015, 2014 and 2013, commissions were incurred in the amounts of $198.3, $217.0 and $218.4, respectively.

- Asset management agreement with Voya Investment Management LLC ("VIM"), an affiliate, in which VIM provides asset management, administration and accounting services for VIAC's general account. The Company records a fee, which is paid quarterly, based on the value of the assets under management. For the years ended December 31, 2015, 2014 and 2013, expenses were incurred in the amounts of $52.8, $48.1 and $50.0, respectively.

- Intercompany agreement with DSL pursuant to which DSL agreed, effective January 1, 2010, to pay the Company, on a monthly basis, a portion of the revenues DSL earns as investment adviser to certain U.S. registered investment companies that are investment options under certain of the Company's variable insurance products. For the years ended December 31, 2015, 2014 and 2013, revenue under the DSL intercompany agreement was $115.5, $139.9 and $147.4, respectively.

- Intercompany agreement with VIM pursuant to which VIM agreed, effective January 1, 2010, to pay the Company, on a monthly basis, a portion of the revenues VIM earns as investment adviser to certain U.S. registered investment companies that are investment options under certain of the Company's variable insurance products. For the years ended December 31, 2015, 2014 and 2013, revenue under the VIM intercompany agreement was $44.3, $41.8 and $34.7, respectively.

- Services agreements with Voya Services Company dated September 1, 2000 and January 1, 2001, respectively, for administrative, management, financial, information technology and finance and treasury services. For the years ended December 31, 2015, 2014 and 2013, expenses were incurred in the amounts of $135.2, $106.9 and $101.9, respectively. Effective October 1, 2010, the services agreement with Voya Services Company dated January 1, 2001, was amended in order for the Company to provide Voya Services Company with use of the corporate office facility at 5780 Powers Ferry Road, N.W., Atlanta, GA (the "Atlanta Office") in exchange for Voya Services Company's payment of the Company's direct and indirect costs for the Atlanta Office.

- Services agreement between the Company and its U.S. insurance company affiliates and other affiliates dated January 1, 2001, amended effective January 1, 2002, December 31, 2007 and October 1, 2008, for administrative, management, professional, advisory, consulting and other services. For the years ended December 31, 2015, 2014 and 2013, expenses related to the agreements were incurred in the amount of $15.0, $13.2 and $12.1, respectively.

- Administrative Services Agreement between the Company, ReliaStar Life Insurance Company of New York ("RLNY"), an affiliate and other U.S. insurance company affiliates dated March 1, 2003, amended effective August 1, 2004, in which the Company and affiliates provide services to RLNY. For the years ended December 31, 2015, 2014 and 2013, revenue related to the agreement was $2.2, $2.3 and $2.2, respectively.

- Variable annuity and fixed insurance products issued by the Company are sold by Voya Financial Advisors, Inc. ("VFA"), an affiliate of the Company. For the years ended December 31, 2015, 2014 and 2013 commission expenses incurred by the Company were $10.6, $10.9 and $10.5, respectively.

Management and service contracts and all cost sharing arrangements with other affiliated companies are allocated in accordance with the Company's expense and cost allocation methods. Revenues and expenses recorded as a result of transactions and agreements with affiliates may not be the same as those incurred if the Company was not a wholly owned subsidiary of its Parent.

Reinsurance Agreements

Reinsurance Ceded

As of December 31, 2015 and 2014, total reserves ceded to affiliates were $5,019.9 and $3,684.4, respectively. For the years ended December 31, 2015, 2014 and 2013, premiums ceded to affiliates were $404.5, $502.5 and $112.2, respectively.

Waiver of Premium - Coinsurance Funds Withheld

Effective October 1, 2010, the Company entered into a coinsurance funds withheld agreement with its affiliate, SLDI. Under the terms of the agreement, the Company ceded to SLDI 100% of the group life waiver of premium liability (except for groups covered under rate credit agreements) assumed from RLI, related to the Group Annual Term Coinsurance Funds Withheld agreement between the Company and RLI described under "Reinsurance Assumed" below.

As of December 31, 2015 and 2014, the value of the funds withheld liability under this agreement was $170.6 and $180.4, respectively, which is included in Funds held under reinsurance treaties with affiliates on the Balance Sheets. In addition, as of December 31, 2015 and 2014, the Company had an embedded derivative under this agreement with a value of $(5.6) and $3.6, respectively, which is recorded in Funds held under reinsurance treaties with affiliates on the Balance Sheets. As of December 31, 2015 and 2014, reserves ceded by the Company under this agreement were $203.6 and $216.7, respectively.

Guaranteed Living Benefit - Coinsurance and Coinsurance Funds Withheld

Effective June 30, 2008, the Company entered into an automatic reinsurance agreement with an affiliate, SLDI, covering 100% of the benefits guaranteed under specific variable annuity guaranteed living benefit riders attached to certain variable annuity contracts issued by the Company on or after January 1, 2000.

Also effective June 30, 2008, the Company entered into a services agreement with SLDI, under which the Company provides certain actuarial risk modeling consulting services to SLDI with respect to hedge positions undertaken by SLDI in connection with the reinsurance agreement. For the years ended December 31, 2015, 2014 and 2013, revenue related to the agreement was $10.9, $12.3, and $12.3, respectively.

Effective July 1, 2009, the reinsurance agreement was amended and restated to change the reinsurance basis from coinsurance to a combined coinsurance and coinsurance funds withheld basis. On July 31, 2009, SLDI transferred assets with a market value of $3.2 billion to the Company and the Company deposited those assets into a funds withheld trust account. As of December 31, 2015 and 2014, the assets on deposit in the trust account were $6.6 billion and $5.5 billion, respectively. The Company also established a corresponding funds withheld liability to SLDI, which is included in Funds held under reinsurance treaties with affiliates on the Balance Sheets. Funds held under reinsurance treaties with affiliates had a balance of $6.6 billion as of December 31, 2015 and $5.3 billion as of December 31, 2014. In addition, as of December 31, 2015 and 2014, the Company had an embedded derivative with a value of $15.8 and $207.4, respectively, which is recorded in Funds held under reinsurance treaties with affiliates on the Balance Sheets.

Also effective July 1, 2009, the Company and SLDI entered into an asset management services agreement, under which SLDI serves as asset manager for the funds withheld account. SLDI has retained its affiliate, VIM, as sub-advisor for the funds withheld account.

Effective October 1, 2011, the Company and SLDI entered into an amended and restated automatic reinsurance agreement in order to provide more flexibility to the Company and SLDI with respect to the collateralization of the reserves related to the variable annuity guaranteed living benefits reinsured under the agreement. As of December 31, 2015 and 2014, reserves ceded by the Company under this agreement were $4.8 billion and $3.4 billion, respectively. In addition, a deferred loss in the amount of $283.3 and $308.1 as of December 31, 2015 and 2014, respectively, is included in Other assets on the Balance Sheets and is amortized over the period of benefit in Other expense in the Statement of Operations.

On May 8, 2013, following the Voya Financial, Inc. IPO, Voya Financial, Inc. made a capital contribution in the amount of $1.8 billion into SLDI, which SLDI deposited into the funds withheld trust account established to provide collateral for the variable

annuity guaranteed living benefit riders ceded to SLDI under the amended and restated automatic reinsurance agreement. Upon deposit of such contributed capital into the funds withheld trust, the Company submitted to ING Bank N.V. ("ING Bank") $1.5 billion of contingent capital LOC issued by ING Bank under the $1.5 billion contingent capital LOC facility between ING Bank and SLDI, and the contingent capital LOCs were canceled and the facility was terminated.

Multi-year Guaranteed Fixed Annuity - Coinsurance

Effective May 1, 2005, the Company entered into a coinsurance agreement with its affiliate, SLD. Under the terms of the agreement, SLD assumed and accepted the responsibility for paying, when due, 100% of the liabilities arising under the multi-year guaranteed fixed annuity contracts issued by the Company between January 1, 2001 and December 31, 2003. The coinsurance agreement was accounted for using the deposit method. In addition, the Company assigned to SLD all future premiums received by the Company attributable to the ceded contracts.

Under the terms of the agreement, the Company ceded $2.5 billion in account balances and transferred a ceding commission and $2.7 billion in assets to SLD, resulting in a realized capital gain of $47.9 to the Company, which reduced the ceding commission.

The coinsurance agreement was accounted for using the deposit method. As such, $2.7 billion of Deposit receivable from affiliate was established on the Balance Sheets. As of December 31, 2014, the deposit receivable was $653.2. On September 25, 2015, the Company recaptured, via a commutation agreement, the multi-year guaranteed fixed annuity contracts ceded under the coinsurance agreement. Under the terms of the agreement, which was effective July 1, 2015, the Company received net assets in the amount of $618.7 in satisfaction of the deposit receivable balance and recognized a pre-tax loss of $4.2 in 2015. The Company incurred amortization expense of the negative ceding commission of $3.2, $6.6 and $4.8, for the years ended December 31, 2015, 2014 and 2013, respectively, which is recorded in Other expense in the Statements of Operations.

Universal Life - Coinsurance

Effective January 1, 2000, the Company entered into a 100% coinsurance agreement with its affiliate, SLD, covering certain universal life policies which had been issued and in force as of, as well as any such policies issued after, the effective date of the agreement. As of December 31, 2015 and 2014, reserves ceded by the Company under this agreement were $20.6 and $20.0, respectively.

Guaranteed Investment Contract - Coinsurance

Effective August 20, 1999, the Company entered into a Facultative Coinsurance Agreement with its affiliate, SLD. Under the terms of the agreement, the Company facultatively cedes, from time to time, certain GICs to SLD on a 100% coinsurance basis. The Company utilizes this reinsurance facility primarily for diversification and asset-liability management purposes in connection with this business. The coinsurance agreement is accounted for using the deposit method. As of December 31, 2015 and 2014, the deposit receivable was $155.3 and $153.5, respectively.

<u>Reinsurance Assumed</u>

As of December 31, 2015 and 2014, total reserves assumed from affiliates were $438.7 and $439.1, respectively. For the years ended December 31, 2015, 2014 and 2013, premiums assumed from affiliates were $428.5, $407.7 and $454.9, respectively.

Level Premium Term Life Insurance - Stop-loss

Effective January 1, 2012, the Company entered into a stop-loss agreement with RLI, which was amended and restated April 1, 2012, under which the Company agreed to indemnify RLI, and RLI agreed to reinsure with the Company, the aggregate mortality risk under the combined blocks of level premium term life insurance policies issued by RLI between January 1, 2009 and December 31, 2009 and also between January 1, 2012 and December 31, 2012. This coverage included certain level premium term life insurance policies assumed by RLI from RLNY under an Automatic Coinsurance Agreement effective March 1, 2008. Under the terms of the agreement, the Company will make benefit payments to RLI equal to the amount of claims in excess of the attachment point (equal to a percentage of net reinsurance premium) up to the maximum fully covered benefit. The stop-loss agreement is

accounted for using the deposit method. A fee receivable from affiliate of $0.4 as of December 31, 2015 and 2014 is included in Other liabilities on the Balance Sheets. The fee is accrued and subsequently settled in cash each quarterly accounting period.

Effective July 1, 2012, the Company entered into a stop-loss agreement with its affiliate, SLD, under which the Company agrees to indemnify SLD, and SLD agrees to reinsure with the Company, aggregate mortality risk under certain level premium term life insurance policies assumed by SLD from RLI and written by either RLI or RLNY with issue dates between January 1, 2007 and March 31, 2008 and between January 1, 2010 and December 31, 2010. Under the terms of the agreement, the Company will make benefit payments to SLD equal to the amount of claims in excess of the attachment point (equal to a percentage of net reinsurance premium) up to the maximum fully covered benefit. The stop-loss agreement was accounted for using the deposit method and, effective October 1, 2014, the agreement was terminated.

Group Annual Term - Coinsurance Funds Withheld

Effective December 31, 2008, the Company entered into a coinsurance funds withheld agreement with RLI for an indefinite duration. Under the terms of the agreement, the Company assumed 100% quota share of RLI's net retained liability under certain Employee Benefits Group Annual Term policies, including disability waiver of premium.

The initial premium of $219.9 was equal to the aggregate reserve assumed by the Company. Thereafter, premiums are equal to the total earned gross premiums collected by RLI from policyholders. RLI will retain all reinsurance premiums payable to the Company as funds withheld, as security for ceded liabilities and against which ceded losses will be offset. Monthly, the Company will receive or pay a net settlement. This agreement was amended and restated October 1, 2010 to better reflect the current investment environment and to modify the treatment of claims under certain policies under which claims are not paid in the form of a single lump sum; the underlying terms described above remained unchanged. (Please see also description of "Waiver of Premium Coinsurance Funds Withheld" agreement between the Company and SLDI under "Reinsurance Ceded" above). As of December 31, 2015 and 2014, reserves assumed by the Company under this agreement were $438.7 and $439.1, respectively.

As of December 31, 2015 and 2014, the value of the funds withheld by ceding companies under this agreement was $464.8 and $467.3, respectively, which is included in Deposit and reinsurance recoverable on the Balance Sheets. In addition, as of December 31, 2015 and 2014, the Company had an embedded derivative under this agreement with a value of $(15.6) and $9.6, respectively.

Reciprocal Loan Agreement

The Company maintains a reciprocal loan agreement with Voya Financial, Inc., an affiliate, to facilitate the handling of unanticipated short-term cash requirements that arise in the ordinary course of business. Under this agreement, which became effective in January 2004, and based upon its renewal on January 14, 2014, expires on January 14, 2024, either party can borrow from the other up to 3.0% of the Company's statutory net admitted assets, excluding Separate Accounts, as of the preceding December 31. For the years ended December 31, 2015 and 2014, interest on any borrowing by either the Company or Voya Financial, Inc. was charged at a rate based on the prevailing market rate for similar third-party borrowings or securities. During the year ended December 31, 2013, interest on any Company borrowing was charged at the rate of Voya Financial, Inc.'s cost of funds for the interest period, plus 0.15%. During the year ended December 31, 2013, interest on any Voya Financial, Inc. borrowing was charged at a rate based on the prevailing interest rate of U.S. commercial paper available for purchase with a similar duration.

Under this agreement, the Company incurred minimal interest expense for the year ended December 31, 2015. The Company did not incur interest expense for the years ended December 31, 2014 and 2013. The Company earned interest income of $0.7, $0.2 and $0.0, for the years ended December 31, 2015, 2014 and 2013, respectively. Interest expense and income are included in Interest expense and Net investment income, respectively, in the Statements of Operations. As of December 31, 2015 and 2014, the Company did not have any outstanding receivable/payable with Voya Financial, Inc. under the reciprocal loan agreement.

Long-Term Debt with Affiliates

The Company issued a 30-year surplus note in the principal amount of $35.0 on December 8, 1999, to its affiliate, SLD, which matures on December 7, 2029. Interest is charged at an annual rate of 7.98%. Payment of the note and related accrued interest is subordinate to payments due to contract owners and claimant and beneficiary claims, as well as debts owed to all other classes of

debtors, other than surplus note holders. Any payment of principal and/or interest made is subject to the prior approval of the Iowa Insurance Commissioner. Interest expense was $2.8 for the years ended December 31, 2015, 2014 and 2013. On December 29, 2004, the Company issued surplus notes in the aggregate principal amount of $400.0 (the "Notes"), scheduled to mature on December 29, 2034, to its affiliates, Voya Retirement Insurance and Annuity Company, RLI and SLDI. The Notes bear interest at a rate of 6.26% per year. Any payment of principal and/or interest is subject to the prior approval of the Iowa Insurance Commissioner. Interest expense was $25.4 for the years ended December 31, 2015, 2014 and 2013.

Derivatives

The Company is party to several derivative contracts with NN Group and ING Bank and one or more of ING Bank's subsidiaries. Each of these contracts was entered into as a result of a competitive bid, which included unaffiliated counterparties. The Company is exposed to various risks relating to its ongoing business operations, including but not limited to interest rate risk, foreign currency risk and equity market risk. To manage these risks, the Company uses various strategies, including derivatives contracts, certain of which are with related parties, such as interest rate swaps, equity options and currency forwards.

As of December 31, 2015, such notional amounts are outstanding with ING Group and NN Group; however, ING Group and NN Group are no longer related parties. As of December 31, 2014, the outstanding notional amount with ING Bank and NN Group was $457.1 (consisting of currency forwards of $178.0 and equity options of $279.1). As of December 31, 2014, the market values for these contracts was $8.8. For the years ended December 31, 2015, 2014 and 2013, the Company recorded Other net realized capital gains (losses) in the Statements of Operations of $17.7, $4.6 and $0.8, respectively, with ING Bank and NN Group.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

The Company carried out an evaluation, under the supervision and with the participation of its management, including its Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of the Company's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended ("Exchange Act")) as of the end of the period covered by this report. Based on that evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that the Company's current disclosure controls and procedures are effective in ensuring that material information relating to the Company required to be disclosed in the Company's periodic SEC filings is made known to them in a timely manner.

Management's Annual Report on Internal Control Over Financial Reporting

Management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) for the Company. The Company's internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements of the Company in accordance with U.S. generally accepted accounting principles. The Company's internal control over financial reporting includes those policies and procedures that:

- pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. generally accepted accounting principles and that receipts and expenditures are being made only in accordance with authorizations of the Company's management and directors; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management has assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2015. In making its assessment, management has used the criteria set forth in "Internal Control - Integrated Framework (2013)" issued by the Committee of Sponsoring Organizations of the Treadway Commission.

In the opinion of management, the Company has maintained effective internal control over financial reporting as of December 31, 2015.

Attestation Report of the Company's Registered Public Accounting Firm

This annual report does not include an attestation report of the Company's registered public accounting firm regarding internal control over financial reporting. Management's report was not subject to attestation by the Company's registered public accounting firm pursuant to Title IX, Section 989G of the Dodd-Frank Act, which provides non-accelerated filers such as the Company with an exemption from Section 404(b) of the Sarbanes-Oxley Act, the provision that otherwise requires an issuer to provide an attestation report by its registered public accounting firm on management's assessment of internal control over financial reporting.

Changes in Internal Control Over Financial Reporting

There were no changes in the internal controls over financial reporting of the Company (as defined in Rule 13a-15(f) of the Exchange Act) that occurred during the quarter ended December 31, 2015 that have materially affected or are reasonably likely to materially affect these internal controls over financial reporting.

Item 9B. Other Information

Section 219 of the Iran Threat Reduction and Syria Human Rights Act of 2012, which was signed into law on August 10, 2012, added a new subsection (r) to Section 13 of the Exchange Act, which requires us to disclose whether the Company or any of its affiliates, including ING Groep N.V ("ING Group" or "ING") or its affiliates, has engaged during the year ended December 31, 2015 in certain Iran-related activities, including any transaction or dealing with the Government of Iran that is not conducted pursuant to a specific authorization of the U.S. Government. For purposes of this disclosure, "affiliates" included ING Group through March 9, 2015.

Neither Voya Financial, Inc. nor any of its subsidiaries, including the Company has knowingly engaged in any transaction or dealing reportable under Section 13(r) of the Exchange Act during the year ended December 31, 2015. The disclosure below relates solely to a limited legacy portfolio of guarantees, accounts, loans and relationships maintained by ING Bank N.V. ("ING Bank"), a subsidiary of ING Group and therefore an affiliate of Voya Financial, Inc. and the Company through March 9, 2015, and does not relate to any activities conducted by Voya Financial, Inc. or its subsidiaries, including the Company or involve the management of Voya Financial, Inc. or its subsidiaries, including the Company, and the information below is based on information provided to the Company by ING Bank.

Other than the transactions described below, at no time during the period in which ING Group continued to be an affiliate of Voya Financial, Inc. and the Company did ING Group or any of its affiliates knowingly conduct or engage in any activities that would require disclosure to the SEC pursuant to Section 13(r) of the Exchange Act. During the period that ING Group continued to be an affiliate of Voya Financial, Inc., ING Bank maintained a limited legacy portfolio of guarantees, accounts, and loans that involved various entities owned by the Government of Iran. ING Bank also had limited legacy relationships with certain persons who were designated under Executive Orders 13224 and 13382. These positions remained on the books, but accounts related thereto may be 'frozen' under applicable laws and procedures. In such cases, any interest or other payments ING Bank was legally required to make in connection with said positions were made into 'frozen' accounts. Funds could only be withdrawn by relevant parties from these 'frozen' accounts after due regulatory consent from the relevant competent authorities. ING Bank had strict controls in place to ensure that no unauthorized account activity took place while the account was 'frozen'. ING Bank may receive loan repayments, but all legacy loan repayments received by ING Bank had been duly authorized by the relevant competent authorities. During the period of 2015 in which ING Group continued to be an affiliate of Voya Financial, Inc. and the Company, ING Bank had gross revenues of approximately $5.8 million related to these activities, which was principally related to legacy loan repayments and commissions on guarantees. ING Bank estimates that it had net profit of approximately $31.5 thousand related to these activities. ING Bank has informed us that it intends to terminate each of the legacy positions as the nature thereof and applicable law permits.

PART III

Item 10. Directors, Executive Officers and Corporate Governance

Omitted pursuant to General Instruction I(2) of Form 10-K, except with respect to compliance with Sections 406 and 407 of the Sarbanes-Oxley Act of 2002.

a. Code of Ethics for Financial Professionals
The Company has approved and adopted a Code of Ethics for Financial Professionals (which was filed as Exhibit 14 to the Company's Form 10-K, as filed with the Securities and Exchange Commission on March 29, 2004, File No. 033-87270), pursuant to the requirements of Section 406 of the Sarbanes-Oxley Act of 2002. Any waiver of the Code of Ethics will be disclosed by the Company by way of a Form 8-K filing.

b. Designation of Board Financial Expert
The Company has designated Ewout L. Steenbergen, Director, as its Board Financial Expert, pursuant to the requirements of Section 407 of the Sarbanes-Oxley Act of 2002. Because the Company is not subject to the requirements of Exchange Act Rule 10A-3, it does not have any outside directors sitting on its board.

Item 11. Executive Compensation

Omitted pursuant to General Instruction I(2) of Form 10-K.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

Omitted pursuant to General Instruction I(2) of Form 10-K.

Item 13. Certain Relationships, Related Transactions and Director Independence

Omitted pursuant to General Instruction I(2) of Form 10-K.

Item 14. Principal Accounting Fees and Services
(Dollar amounts in millions, unless otherwise stated)

In 2015 and 2014, Ernst & Young LLP ("Ernst & Young") served as the principal external auditing firm for Voya Financial, Inc., including Voya Insurance and Annuity Company ("VIAC" or the "Company", as appropriate). Voya Financial, Inc. subsidiaries, including VIAC, are allocated Ernst & Young fees attributable to services rendered by Ernst & Young to each subsidiary. Ernst & Young fees allocated to the Company along with a description of the services rendered by Ernst & Young to the Company are detailed below for the periods indicated.

	Year Ended December 31,	
	2015	**2014**
Audit fees	$ 2.1	$ 3.4
Audit-related fees	1.0	0.3
Tax fees	- *	- *
All other fees	- *	0.1
	$ 3.1	$ 3.8

* Less than $0.1.

Audit Fees

Audit fees were allocated to VIAC and include fees associated with professional services rendered by the auditors for the audit of the annual financial statements of the Company and review of the Company's interim financial statements.

Audit-related Fees

Audit-related fees were allocated to VIAC for assurance and related services that are reasonably related to the performance of the audit or review of the financial statements and are not reported under the audit fee item above. These services consisted primarily of the audit of financial information supporting the Securities and Exchange Commission ("SEC") product filings.

Tax Fees

There were minimal tax fees allocated to VIAC in 2015 and 2014. Tax fees allocated to VIAC were primarily for tax compliance. These services consisted of tax compliance, including the review of tax disclosures and proper completion of tax forms, assistance with questions regarding tax audits and tax planning and advisory services related to common forms of domestic taxation (i.e., income tax and capital tax).

All Other Fees

There were minimal fees allocated to VIAC in 2015 and 2014 under the category "All other fees." Other fees allocated to VIAC under this category typically include fees paid for products and services other than the audit fees, audit-related fees and tax fees described above and consist primarily of advisory services.

Pre-approval Policies and Procedures

VIAC is subject to the pre-approval policies and procedures of Voya Financial, Inc. Audit, audit-related and non-audit services provided to the Company by the independent registered public accountants of Voya Financial, Inc. (the "External Auditor") are included in the total annual budgeted amounts for Voya Financial, Inc. and pre-approved by the audit committee of Voya Financial, Inc. (the "Voya Financial audit committee"). Pursuant to the pre-approval policies and procedures of Voya Financial, Inc., the Voya Financial audit committee is required to pre-approve all services provided by the External Auditor to Voya Financial, Inc. and its subsidiaries, including the Company. The pre-approval policies and procedures of Voya Financial, Inc. distinguish five types of services: (1) audit services, (2) audit-related services, (3) tax services, (4) other services that are not audit, audit-related, tax, or prohibited services and (5) prohibited services (as described in the Sarbanes-Oxley Act of 2002).

The pre-approval procedures of Voya Financial, Inc. consist of a general pre-approval procedure and a specific pre-approval procedure.

General Pre-approval Procedure

The Voya Financial audit committee pre-approves audit, audit-related, tax and other services to be provided by the External Auditor to Voya Financial, Inc. and its subsidiaries on an annual basis, and sets the maximum annual amount for such pre-approved services. Throughout the year, the Voya Financial audit committee receives from the External Auditor an overview of all services provided, including related fees and supported by sufficiently detailed information. The Voya Financial audit committee evaluates this overview quarterly. Additionally, the Voya Financial, Inc. Corporate Controller monitors the amounts paid versus the pre-approved amounts throughout the year.

Specific Pre-approval Procedure

In addition to the general pre-approval procedure of Voya Financial, Inc., each proposed External Auditor engagement by Voya Financial, Inc. or one of its subsidiaries that is expected to generate fees in excess of the pre-approved amounts, must be approved by the Voya Financial audit committee after recommendation of Voya Financial, Inc. management on a case-by-case basis.

In 2015 and 2014, 100% of each of the audit-related services, tax services and all other services provided to the Company were pre-approved by the audit committee of Voya Financial, Inc. In 2013, 100% of each of the audit-related services, tax services and all other services provided to the Company were pre-approved by the audit committees of Voya Financial, Inc. and ING Groep N.V.

Report of Independent Registered Public Accounting Firm

The Board of Directors
Voya Insurance and Annuity Company

We have audited the financial statements of Voya Insurance and Annuity Company as of December 31, 2015 and 2014, and for each of the three years in the period ended December 31, 2015, and have issued our report thereon dated March 18, 2016 (included elsewhere in this Annual Report (Form 10-K)). Our audits also included the financial statement schedules, listed in Item 15.a. of this Annual Report (Form 10-K). These schedules are the responsibility of the Company's management. Our responsibility is to express an opinion on these schedules based on our audits.

In our opinion, the financial statement schedules referred to above, when considered in relation to the basic financial statements taken as a whole, present fairly, in all material respects, the information set forth therein.

[1]Attached as Exhibit 101 to this report are the following Interactive Data Files formatted in XBRL (eXtensible Business Reporting Language): (i) Balance Sheets as of December 31, 2015 and 2014; (ii) Statements of Operations for the years ended December 31, 2015, 2014 and 2013; (iii) Statements of Comprehensive Income for the years ended December 31, 2015, 2014 and 2013; (iv) Statements of Changes in Shareholder's Equity for the years ended December 31, 2015, 2014 and 2013; (v) Statements of Cash Flows for the years ended December 31, 2015, 2014 and 2013; and (vi) Notes to the Financial Statements.

Users of this data are advised pursuant to Rule 401 of Regulation S-T that the information contained in the XBRL documents is unaudited and these are not the official publicly filed financial statements of Voya Insurance and Annuity Company.

+ Filed herewith.

Exhibit 10.34

COMMUTATION AGREEMENT

This Commutation Agreement (this "Agreement") is made effective 12:01 a.m., Local Standard Time, July 1, 2015 (the "Effective Date"), by and between Voya Insurance and Annuity Company, formerly known as ING USA Annuity and Life Insurance Company, an Iowa insurance company (hereinafter "Company"), and Security Life of Denver Insurance Company, a Colorado insurance company (hereinafter "Reinsurer"). Together, Company and Reinsurer are referred to herein as the "Parties" or individually as a "Party".

RECITALS

WHEREAS, Company and Reinsurer are parties to that certain Coinsurance Agreement, effective May 1, 2005, pursuant to which Company ceded to Reinsurer 100% of all liabilities arising under certain specified contracts comprising "Deferred Annuities - MYGA" as defined in the Coinsurance Agreement (the "Reinsurance Agreement"); and

WHEREAS, the Parties contemplate Company recapturing the ceded risks under the Reinsurance Agreement subject to a mutually agreed valuation process, and the Parties have settled on Reinsurer's share of the outstanding obligations with respect to such ceded risks and other good and valuable consideration to support a recapture of such ceded risks; and

WHEREAS, the Parties now desire to fully and finally settle and commute all of their respective past, present, and future obligations and liabilities, known and unknown, pertaining to the losses incurred by Company and ceded to Reinsurer under the Reinsurance Agreement.

NOW, THEREFORE, in consideration of the covenants set forth herein and the payment made pursuant to paragraph 2 below (the sufficiency of which is hereby acknowledged), it is agreed by and between the Parties as follows:

1. On the terms and subject to the conditions of this Agreement, including the payment obligations set forth below, the Reinsurance Agreement is hereby entirely commuted and finally settled. No further premiums are due and no further reinsurance shall be provided under the Reinsurance Agreement after the Effective Date.

2. Reinsurer shall pay, or cause to be paid to Company, an amount equal to (i) the statutory reserves for the ceded liabilities under the Reinsurance Agreement (including contract reserves and interest maintenance reserves) as of June 30, 2015, and (ii) a negative ceding commission in an amount equal to Twenty Million Dollars ($20,000,000.00) (together, the "Commutation Amount"). To satisfy payment of the Commutation Amount, Reinsurer will transfer to Company assets and/or cash in amounts and values as identified on the attached Schedule A (the "Transfer"), and the Transfer will be consummated within thirty (30) calendar days following the full execution of this Agreement.

3. The payment of the Commutation Amount represents a full and final settlement of any and all amounts claimed heretofore and any and all amounts hereafter said to be due under, in respect of or in any way arising from the Reinsurance Agreement.

4. Subject to receipt of the Commutation Amount payment, the Parties hereby irrevocably release, discharge, indemnify and hold harmless each other and their respective predecessors, parents, affiliates, subsidiaries, officers, directors, employees, shareholders, policyholders, successors and assigns from any and all liabilities, including, but not limited to, all obligations, adjustments, executions, offsets, actions, causes of action, suits, debts, sums of money, accounts, reckonings, bonds, bills, covenants, contracts, controversies, agreements, promises, damages, judgments, claims, demands, duties, omissions, costs, expenses and/or losses whatsoever, whether known or unknown, reported or unreported, and whether arising in the past, present or future, which they and their respective predecessors, successors and assigns ever had, now have, or hereafter may have, whether grounded in law or equity, in contract or in tort, against the other by reason of any matter whatsoever arising out of the Reinsurance Agreement, it being the intention of the Parties that this Agreement shall operate as a full and final settlement of each of the past, current and future liabilities of Company and Reinsurer under the Reinsurance Agreement.

5. The Parties absolutely and unconditionally covenant and agree with each other, their respective successors and assigns, that neither Party will hereafter for any reason whatsoever, demand, claim or file suit or initiate arbitration proceedings against the other in respect of any matters arising out of the Reinsurance Agreement, except with respect to enforcement of this Agreement.

6. Miscellaneous Provisions.

6.1 This Agreement is the result of arm's length negotiations, and the terms of this Agreement have been completely read and fully understood after each Party had the opportunity to consult with its attorneys and are voluntarily accepted by both the Parties. In the event of a dispute over this Agreement, there shall be no construction or interpretation against the drafter.

6.2 Each of the Parties represents and warrants to the other that it is a corporation in good standing in its state of domicile; that it is fully authorized and empowered to execute and deliver this Agreement; that the persons executing this Agreement are fully authorized to do so; that it has not assigned, sold or transferred any interest in the Reinsurance Agreement, or claim or right that is affected by this Agreement, to any other person or entity; that no authorization, consent or approval of any governmental entity is required to make this Agreement valid and enforceable; that no other agreement, undertaking, contract, law, or matter exists that might render this Agreement void, voidable, or unenforceable and that this Agreement is enforceable against each in accordance with its terms.

6.3 This Agreement constitutes the entire agreement between the parties as respects its subject matter. Any and all discussions and agreements previously entertained between the Parties concerning the subject matter herein are merged into this Agreement. This Agreement may not be modified or amended, except by written instrument executed by each of the Parties hereto.

6.4 This Agreement is made by and between the Parties, and is not intended to make any other person or entity a third-party beneficiary of this Agreement and such third parties have no rights under this Agreement.

6.5 If any provision of this Agreement should be rendered invalid, illegal or unenforceable by the law, regulations or public policy of any jurisdiction, such provision will be considered void in such jurisdiction, but this will not affect the validity or enforceability of such provision in any other jurisdiction. The parties will renegotiate this Agreement in good faith to cure such invalid, illegal or unenforceable provision. If such negotiations are unsuccessful to resolve the matter, then (a) such invalid, illegal or unenforceable provision will be deleted from the Agreement, (b) to the maximum extent permitted by law, such invalidity, illegality or unenforceability will not affect any other provisions of this Agreement and (c) this Agreement will be construed so as to carry out its original intent.

6.6 The Parties agree that all matters relating to the terms, background discussions, negotiation and implementation of the Agreement, but not the existence of the Agreement itself, shall be confidential, and will not be disclosed by either Party without the written consent of the other except as follows. Either Party may disclose the terms and conditions of the Agreement to its reinsurers, provided such reinsurers are notified of the confidentiality requirements. In addition, the Parties may disclose the terms and conditions to the following: [a] to the parties' directors, officers, employees, attorneys, affiliates, rating agencies, reinsurers, brokers and auditors having a genuine need to know, provided such individuals are notified of the confidentiality requirements; or [b] as required by operation of law, including but not limited to statute, rule, regulation, order or subpoena or any judicial, quasi-judicial, administrative, governmental or regulatory body or agency. Either Party disclosing such terms and conditions pursuant to [b] herein shall give the other Party reasonable advance notice of any subpoena or discovery request from any person other than a regulatory authority having jurisdiction over that Party, in order that the other Party has an opportunity, at its own expense, to take appropriate legal or protective action.

6.7 The failure of any Party to enforce, at any time, any of the provisions of this Agreement shall in no way be construed to be a waiver of such provisions, nor in any way to affect the validity of the Agreement, or any part thereof, or the rights of such Party to thereafter enforce any of such provisions.

6.8 This Agreement may be signed in counterparts**,** each of which shall be an original and all of which taken together shall constitute one and the same agreement. Facsimile signatures shall be sufficient for the execution of this Agreement and shall be binding with the same force as original signatures.

6.9 This Agreement shall be interpreted and enforced in accordance with the law of the State of Iowa (without giving effect to the principles of conflicts of law thereof). In any action arising out of or relating to this Agreement, the Parties hereby consent to the exclusive jurisdiction of any State or Federal Court sitting in the State of Iowa. This Agreement is not subject to the arbitration provisions in the Reinsurance Agreement.

IN WITNESS WHEREOF, each Party has executed this Agreement by a duly authorized officer or attorney duly empowered to sign on its behalf.

CERTIFICATION

I, David P. Wiland, certify that:

1. I have reviewed this annual report on Form 10-K of Voya Insurance and Annuity Company;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

NOTE CONCERNING FORWARD-LOOKING STATEMENTS

This *Annual Report on Form* 10-K, including "Risk Factors," "Management's Narrative Analysis of the Results of Operations and Financial Condition," and "Business" contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements include statements relating to future developments in our business or expectations for our future financial performance and any statement not involving a historical fact. Forward-looking statements use words such as "anticipate," "believe," "estimate," "expect," "intend," "plan," and other words and terms of similar meaning in connection with a discussion of future operating or financial performance. Actual results, performance or events may differ materially from those projected in any forward-looking statement due to, among other things, (i) general economic conditions, particularly economic conditions in our core markets, (ii) performance of financial markets, including emerging markets, (iii) the frequency and severity of insured loss events, (iv) mortality and morbidity levels, (v) persistency and lapse levels, (vi) interest rates, (vii) currency exchange rates, (viii) general competitive factors, (ix) changes in laws and regulations; (x) changes in the policies of governments and/or regulatory authorities; and (xi) other factors described in the section "Item 1A. Risk Factors."

The risks included here are not exhaustive. Current reports on Form 8-K and other documents filed with the Securities and Exchange Commission ("SEC") include additional factors that could affect our businesses and financial performance. Moreover, we operate in a rapidly changing and competitive environment. New risk factors emerge from time to time, and it is not possible for management to predict all such risk factors.

PART I

Item 1. Business

(Dollar amounts in millions, unless otherwise stated)

Organization of Business

Voya Insurance and Annuity Company ("VIAC" or "the Company") is a stock life insurance company domiciled in the State of Iowa and provides financial products and services in the United States. VIAC is authorized to conduct its insurance business in all states, except New York and in the District of Columbia.

Prior to May 2013, Voya Financial, Inc., together with its subsidiaries, including the Company, was an indirect, wholly owned subsidiary of ING Groep N.V. ("ING Group" or "ING"), a global financial services holding company based in The Netherlands. In May 2013, Voya Financial, Inc. completed its initial public offering of common stock, including the issuance and sale of common stock by Voya Financial, Inc. and the sale of shares of common stock owned indirectly by ING Group. Between October 2013 and March 2015, ING Group completed the sale of its remaining shares of common stock of Voya Financial, Inc. in a series of registered public offerings. ING Group continues to hold certain warrants to purchase up to 26,050,846 shares of Voya Financial, Inc. common stock at an exercise price of $48.75, in each case subject to adjustments.

VIAC is a direct, wholly owned subsidiary of Voya Holdings Inc. ("Parent"), which is a direct, wholly owned subsidiary of Voya Financial, Inc.

Description of Business

We currently offer various insurance products, including fixed and indexed annuities, investment-only products and payout annuities for pre-retirement wealth accumulation and postretirement income management. Our annuity products are distributed by national and regional brokerage and securities firms, independent broker-dealers, banks, life insurance companies with captive agency sales forces, independent insurance agents, independent marketing organizations and affiliated broker-dealers. Our primary annuity customers are individual consumers. We stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010, as part of a global business strategy and risk reduction plan. New amounts will continue to be deposited in VIAC variable annuities as add-on premiums to existing contracts.

In 2009, we made a strategic decision to run-off over time the assets and liabilities related to guaranteed investment contracts and funding agreements previously issued to institutional investors and corporate benefit plans. As such, no guaranteed investment contracts were outstanding during 2016 and 2015. Additionally, all of the previously issued funding agreements will mature or be terminated by the end of 2017. We may issue new funding agreements to support liquidity in the future.

See "-Reserves for Future Policy Benefits and Separate Accounts" below for a discussion of our reserves by product type.

We have one operating segment, which offers the products described below.

Products and Services

Products currently offered by us are designed to address customer needs for tax-advantaged savings, retirement needs and wealth-protection concerns, as well as funding agreements. As mentioned above, the Company stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010. However, because the existing contracts remain in effect, they are described below.

Fixed Annuities: The fixed annuities offered by us are general account products and include single premium immediate, multi-year guaranteed, annual reset and fixed indexed annuities ("FIA"). Under fixed annuity contracts, the principal amount is guaranteed and, for a specified time period, we credit interest to the contract owner accounts at a fixed interest rate. Interest on FIAs is credited based on allocations selected by a customer in one or more of the strategies we offer and upon policy parameters that we set. The FIA strategies include a fixed interest rate option, as well as several options based upon performance of various external financial market indices. Such indices may include equity indices, such as the Standard & Poor's 500 Index ("S&P 500"), or an interest rate benchmark, such as the change in London Interbank Offered Rates ("LIBOR"). For accounting purposes, the index return component of an FIA is considered an embedded derivative. See further discussion under "-Reserves for Future Policy Benefits and Separate Accounts" below. We bear the investment risk on fixed annuities, because, while we credit contract owner accounts with a stated interest rate, we cannot be certain the investment income earned on the general account assets will exceed that rate.

Some FIAs contain guaranteed withdrawal benefit features at an additional cost. These living benefits guarantee a minimum annual withdrawal amount for life. The amount of the guaranteed annual withdrawal may vary by age at first withdrawal.

Our major source of income from fixed annuities is the spread between the investment income earned on the underlying general account assets and the interest rate credited to contract owner accounts.

Funding Agreements: We also have funding agreements issued to institutional customers. We profit from this business by earning income in excess of the amount credited to the customer accounts, less the cost of administering the product. We bear the investment risk because, while we credit customer accounts with an interest rate based on a predetermined index, plus a spread or a fixed rate, we cannot be certain the investment income earned on the general account investments, less expenses will exceed that rate. Funding agreements may also be used to support liquidity.

Variable Annuities: While we stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010, our existing variable annuities are investment vehicles in which contract owner deposits are recorded and primarily maintained in separate accounts established by us and registered with the SEC as a unit investment trust. Unlike fixed annuities, variable annuity contract owners bear the risk of investment gains and losses associated with the selected investment allocation. We, however, issued certain guaranteed death and living benefits (described below) under which we bear specific risks associated with these products.

Separate account assets and liabilities generally represent funds maintained to meet specific investment objectives of contract owners. In general, investment income and investment gains and losses accrue directly to the separate accounts. The assets of the separate account are legally segregated and are not subject to claims that arise out of any of our other business.

Separate account assets supporting variable options under variable annuity contracts are invested, as designated by the contract owner or participant under a contract, in shares of sub-accounts managed by our affiliates or in other selected sub-accounts not managed by our affiliates. Variable annuity deposits are allocated to various sub-accounts established within the separate account. Each sub-account represents a different investment option into which the contract owner may allocate deposits. The account value of a variable annuity contract is equal to the aggregate value of the sub-accounts selected by the contract owner, including the value allocated to any fixed account, less fees and expenses. We offer investment options for our variable annuities covering a wide range of investment styles, including large, mid and small cap equity funds, as well as fixed income alternatives. Many of the variable annuity contracts issued by us are combination contracts, offering both variable and fixed options under which some or all of the deposits may be allocated by the contract owner to a fixed account.

Minimum Guarantees: Variable annuity contracts containing minimum guaranteed death and living benefits expose us to equity risk. A decrease in the equity markets may cause a decrease in the account values, thereby increasing the possibility that we may be required to pay amounts to contract owners due to guaranteed death and living benefits. An increase in the value of the equity markets may increase account values for these contracts, thereby decreasing our risk associated with guaranteed death and living benefits.

We stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010. However, our existing variable annuity block of business contains certain guaranteed death and living benefits made available to contract owners as described in Quantitative and Qualitative Disclosures About Market Risk in Part II, Item 7A. of this Annual Report on Form 10-K.

Other Insurance Products

Historically, we provided interest-sensitive, traditional life insurance and health insurance products. All health insurance has been ceded to other insurers and new policies are no longer written. We ceased the issuance of life insurance policies in 2001, and all life insurance business is currently in run-off. A certain portion of the assets held in the general account is dedicated to funding this block of business.

Fees and Margins

Insurance and expense charges, investment management fees, service fees and other fees earned by us vary by product and depend on, among other factors, the funding option selected by the customer under the product. For annuity products where assets are allocated to variable funding options through a separate account, we may charge the separate account asset-based insurance and expense fees.

In addition, where the customer selects a variable funding option, we may receive compensation from the fund's adviser, administrator, or other affiliated entity, for the performance of certain administrative, recordkeeping or other services. This compensation, which may be deducted from fund assets, may include a share of the management fee, service fees, 12b-1 distribution fees or other revenues based on a percentage of average net assets held in the fund by us. For funds managed by an affiliate, additional compensation may be received in the form of intercompany payments from the fund's investment advisor or the investment advisor's parent in order to allocate revenue and profits across the organization.

For fixed funding options, we earn a margin that is based on the difference between income earned on the investments supporting the liability and interest credited to customers.

We may also receive other fees or charges depending on the nature of the products.

Strategy, Method of Distribution and Principal Markets

We believe longer life expectancies, an aging population and growing concern over the stability and availability of the Social Security system have made retirement planning a priority for many Americans. The target market for our annuity products is primarily individuals.

The principal distribution channels of our fixed annuities, fixed index annuities, and investment-only products include independent broker-dealers, independent marketing organizations, affiliated broker-dealers, captive insurance companies and banks. Products are represented by advisors and agents that would affiliate with one of the above channels.

Our investment-only products' new sales are obtained from either a "rollover" from an existing retirement account, a 1035-exchange or funded through non-qualified after-tax dollars.

Indexed annuities are marketed primarily based on underlying guarantee features coupled with consumer-friendly product designs offering the potential for equity market upside. We also offer fixed annuities offering a guaranteed interest rate or annuity payment suitable for clients seeking a stable return.

We stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010, as part of a business strategy and risk reduction plan. Some new amounts will continue to be deposited on VIAC variable annuities as add-on deposits to existing contracts.

Funding agreements are issued to institutional investors through direct sales by home office personnel. In 2009, we made a strategic decision to run-off over-time the assets and liabilities related to the guaranteed investment contracts and funding agreements previously issued. There are no guaranteed investment contracts remaining and no new guaranteed investment contracts will be issued. All of the previously issued funding agreements will mature or be terminated by the end of 2017. New funding agreements may be issued to support liquidity.

Since December 2013, we have been engaged in a strategic relationship with The Allstate Corporation ("Allstate") under which Allstate offers a full suite of our fixed annuity product offerings to Allstate customers. In addition, during 2015, we engaged in a strategic relationship with Farmers Financial Solutions, a part of the Farmers Insurance Group of Companies, under which we are the exclusive provider of indexed annuity products to Farmers customers.

Assets Under Management

A substantial portion of our fees, other charges and margins, are based on assets under management ("AUM"). AUM represents on-balance sheet assets supporting customer account values/liabilities and surplus. Customer account values reflect the amount of policyholder equity that has accumulated within annuity, funding agreement and other insurance products. AUM includes general account assets in which we bear the investment risk and separate account assets in which the contract owner bears the investment risk. AUM-based revenues increase or decrease with a rise or fall in the amount of AUM, whether caused by changes in capital markets or by net flows.

AUM is principally affected by net deposits (i.e., annuity premiums and funding agreement deposits, less surrenders) and investment performance (i.e., interest credited to contract owner accounts for assets that earn a fixed return or market performance for assets that earn a variable return). The general and separate account AUM were as follows as of the dates indicated:

	December 31,	
	2016	2015
Variable annuities	$ 35,719.8	$ 36,415.8
Fixed annuities	18,349.1	18,132.2
Funding agreements	200.1	950.4
Other products	1,193.3	970.1
Total	$ 55,462.3	$ 56,468.5

Competition

The competitive annuity market faces competition from banks, mutual fund companies and traditional insurance carriers. Increasing competition within the retirement savings business offers consumers many choices. Our annuity products compete in the annuity market principally on the basis of investment performance, product design, brand recognition, financial strength ratings, distribution capabilities, levels of charges and credited rates, reputation and customer service.

Investment-only products compete with brokerage accounts and other financial service and asset allocation offerings.

Reserves for Future Policy Benefits and Separate Accounts

We establish and carry actuarially-determined reserves that are calculated to meet our future obligations. Reserves also include estimates of unpaid claims as well as claims that we believe have been incurred but have not yet been reported as of the balance sheet date. The principal assumptions used to establish liabilities for future policy benefits are based upon Company experience and periodically reviewed against industry standards. These assumptions include mortality, morbidity, policy lapse, contract renewal, payment of subsequent premiums or deposits by the contract owner, retirement, investment returns, inflation, benefit utilization and expenses. Changes in, or deviations from, the assumptions used can significantly affect our reserve levels and related results of operations.

Reserves for traditional life insurance contracts (term insurance, participating and non-participating whole life insurance and traditional group life insurance) and accident and health insurance represent the present value of future benefits to be paid to or on behalf of contract owners and related expenses, less the present value of future net premiums. Assumptions as to interest rates, mortality, expenses and persistency are based on our estimates of anticipated experience at the period the policy is sold or acquired, including a provision for adverse deviation. Interest rates used to calculate the present value of these reserves ranged from 2.3% to 7.2%.

Reserves for payout contracts with life contingencies are equal to the present value of expected future payments. Assumptions as to interest rates, mortality and expenses are based on our estimates of experience at the period the policy is sold or acquired, including a provision for adverse deviation. Such assumptions generally vary by annuity plan type, year of issue and policy duration. Interest rates used to calculate the present value of future benefits ranged from 1.0% to 7.5%.

The aggregate initial liability for reserves related to FIAs is equal to the deposit received plus a bonus, if applicable, and is split into a host component and an embedded derivative component. Thereafter, the host liability accumulates at a set interest rate and the embedded derivative liability is recognized at fair value, with the change in fair value recorded in Other net realized capital gains (losses) in the Statements of Operations.

Reserves for universal life products are equal to cumulative deposits, less withdrawals and charges, plus credited interest thereon.

The Company calculates additional reserve liabilities for certain variable annuity guaranteed benefits, FIA withdrawal benefits and universal life products with certain patterns of cost of insurance charges and certain other fees. The additional reserve for such products recognizes the portion of contract assessments received in early years used to compensate the insurer for services provided in later years.

We calculate a benefit ratio for each block of business that meets the requirements for additional reserves and calculate an additional reserve by accumulating amounts equal to the benefit ratio multiplied by the assessments for each period, reduced by excess benefits during the period. The additional reserve is accumulated at interest rates consistent with the deferred policy acquisition costs model for the period. The calculated reserve includes a provision for universal life contracts with patterns of cost of insurance charges that produce expected gains from the insurance benefit function followed by losses from that function in later years.

Guaranteed minimum accumulation benefits ("GMAB"), guaranteed minimum withdrawal benefits ("GMWB") without life contingent payouts and guaranteed minimum withdrawal benefits for life ("GMWBL") are considered to be embedded derivatives. The additional reserves for these guarantees are recognized at fair value, with the change in fair value recorded in Other net realized capital gains (losses) in the Statements of Operations.

Reserves for funding agreements are calculated using the amount deposited with us, less withdrawals, plus interest accrued to the ending valuation date. Interest on these contracts is accrued by a predetermined index, plus a spread or a fixed rate, established at the issue date of the contract.

Our life and annuity insurance reserves (general and separate account) and deposit-type funds were comprised of each type of the following products as of the dates indicated:

	December 31,			
	2016		2015	
	Reserves	% of Total	Reserves	% of Total
Variable annuity	$ 39,265.4	65.6%	$ 40,353.9	66.0%
Fixed annuity	18,745.7	31.3%	18,117.8	29.7%
Funding agreements	347.1	0.6%	1,048.2	1.7%
Other products	1,517.1	2.5%	1,585.4	2.6%
Total	$ 59,875.3	100.0%	$ 61,105.3	100.0%

Reinsurance Arrangements

We utilize indemnity reinsurance agreements to reduce our exposure to losses from our annuity and life insurance businesses. Reinsurance permits recovery of a portion of losses from reinsurers, although it does not discharge our primary liability as the direct insurer of the risks. Reinsurance treaties are structured as monthly or yearly renewable term, coinsurance, or modified coinsurance. The Company also evaluates the financial strength of potential reinsurers and continually monitors the financial condition of reinsurers.

As of December 31, 2016, we have a significant concentration of ceded reinsurance with our affiliates, Security Life of Denver Insurance Company ("SLD") and Roaring River II, Inc. ("RRII"), a subsidiary of Security Life of Denver International Limited ("SLDI"), primarily related to funding agreements and universal life policies with respect to SLD and variable annuities with respect to RRII. The outstanding reinsurance recoverable balances may fluctuate from period to period.

One of the main risks reinsured by us is the guaranteed minimum death benefits ("GMDB") on our variable annuity policies issued prior to January 1, 2000. For contracts issued on or after January 1, 2000, we hedge our exposure due to these products. Other reinsurance contracts coinsure life, accident and health and annuity businesses. We continually monitor and evaluate the financial strength and credit ratings of our reinsurers. Only those reinsurance recoverable balances deemed probable of recovery are reflected as assets on our Balance Sheets.

Prior to July 1, 2016, we had an amended and restated automatic reinsurance agreement with SLDI, on a combined coinsurance and coinsurance funds withheld basis, covering 100% of the benefits guaranteed under specific variable annuity guaranteed living benefit riders attached to certain variable annuity contracts issued by us on or after January 1, 2000.

Effective July 1, 2016, SLDI acquired RRII, a Missouri life reinsurance captive, from its affiliate, ReliaStar Life Insurance Company, and also effective July 1, 2016, RRII redomesticated from the State of Missouri to the State of Arizona. Effective July 1, 2016, we, SLDI and RRII entered into release, consent and novation agreements pursuant to which RRII assumed the variable annuity guaranteed living benefits previously reinsured to SLDI under the automatic reinsurance agreement.

We also currently reinsure risks ceded by our affiliates, ReliaStar Life Insurance Company ("RLI") and SLD, on life insurance policies through a coinsurance funds withheld agreement, a quota share retrocession agreement and stop-loss agreements.

See Liquidity and Capital Resources-Reinsurance Agreements in Part II, Item 7. of this Annual Report on Form 10-K for further discussion of our reinsurance arrangements.

Investment Overview and Strategy

Our investment strategy seeks to achieve sustainable risk-adjusted returns by focusing on principal preservation, disciplined matching of asset characteristics with liability requirements and the diversification of risks. Investment activities are undertaken according to investment policy statements that contain internally established guidelines and risk tolerances and in all cases are required to comply with applicable laws and insurance regulations. Risk tolerances are established for credit risk, credit spread risk, market risk, liquidity risk and concentration risk across issuers, sectors and asset types that seek to mitigate the impact of cash flow variability arising from these risks.

Investments are managed by Voya Investment Management LLC, our affiliate, pursuant to an investment advisory agreement. Portfolios are established for groups of products with similar liability characteristics within us. Our investment portfolio consists largely of high quality fixed maturity securities and short-term investments, investments in commercial mortgage loans, limited partnerships and other instruments, including a small amount of equity holdings. Fixed maturity securities include publicly issued corporate bonds, government bonds, privately placed notes and bonds, mortgage-backed securities and asset-backed securities. We use derivatives for hedging purposes and to replicate exposure to other assets as a more efficient means of assuming credit exposure similar to bonds of the underlying issuer(s).

Employees and Other Shared Services

We had 470 employees as of December 31, 2016, primarily focused on managing new business processing, customer service and product management for us and certain of our affiliates, as well as providing product development and distribution, actuarial and finance services to us and certain of our affiliates. We also utilize services provided by Voya Services Company and other affiliates. These services include underwriting, risk management, human resources, investment management, information technology, legal and compliance services, as well as other new business processing, product distribution, marketing, customer service, product management, actuarial and finance related services. The affiliated companies are reimbursed for our use of various services and facilities under a variety of intercompany agreements.

On June 2, 2014, our affiliate, Voya Services Company entered into an agreement to outsource the actuarial valuation, modeling and hedging functions for our retail variable annuity products for which we ceased sales in 2010 to Milliman, Inc. ("Milliman"). Under this agreement, Milliman performs the calculation of financial reporting and risk metrics, along with the analytics used to determine hedge positions. We will continue to oversee and manage our existing block of variable annuity business and retain full accountability for assumptions and methodologies, as well as the setting of hedge objectives and the execution of hedge positions. This agreement will allow us to create a more variable cost structure for the block of variable annuity business.

REGULATION

Our operations and businesses are subject to a significant number of Federal and state laws, regulations, administrative determinations and similar legal constraints. Such laws and regulations are generally designed to protect our policyholders, contract owners and other customers and not our stockholders. Many of the laws and regulations to which we are subject are regularly re-examined and existing or future laws and regulations may become more restrictive or otherwise adversely affect our operations.

Following is a description of certain legal and regulatory frameworks to which we are or may be subject.

Insurance Regulation

Our operations are subject to comprehensive regulation and supervision under U.S. state and federal laws. Each U.S. state, the District of Columbia and U.S. territories and possessions have insurance laws that apply to companies licensed to carry on an insurance business in the jurisdiction. We are subject to the insurance laws of the State of Iowa, where we are domiciled and other jurisdictions in which we transact business. The primary regulator of our insurance operations is the Division of Insurance for the State of Iowa.

State insurance regulators have broad administrative powers with respect to all aspects of the insurance business including: licensing to transact business, licensing agents, admittance of assets to statutory surplus, regulating premium rates for certain insurance products, approving policy forms, regulating unfair trade and claims practices, establishing reserve requirements and solvency standards, establishing credit for reinsurance requirements, fixing maximum interest rates on life insurance policy loans and minimum accumulation or surrender values and other matters. State insurance laws and regulations include numerous provisions governing the marketplace conduct of insurers, including provisions governing the form and content of disclosures to consumers, product illustrations, advertising, product replacement, suitability, sales and underwriting practices, complaint handling and claims handling. State regulators enforce these provisions through periodic market conduct examinations. State insurance laws and regulations regulating affiliate transactions, the payment of dividends, and change of control transactions are discussed in greater detail below.

State insurance laws and regulations require us to file financial statements with state insurance regulators everywhere we are licensed and our operations and accounts are subject to examination by those regulators at any time. We prepare statutory financial statements in accordance with accounting practices and procedures prescribed or permitted by these regulators. The National Association of Insurance Commissioners (the “NAIC”) has approved a series of uniform statutory accounting principles ("SAP") that have been adopted, in some cases with minor modifications, by all state insurance regulators.

As a basis of accounting, SAP was developed to monitor and regulate the solvency of insurance companies. In developing SAP, insurance regulators were primarily concerned with assuring an insurer’s ability to pay all its current and future obligations to policyholders. As a result, statutory accounting focuses on conservatively valuing the assets and liabilities of insurers, generally in accordance with standards specified by the insurer’s domiciliary state. The values for assets, liabilities and equity reflected in financial statements prepared in accordance with U.S. GAAP are usually different from those reflected in financial statements prepared under SAP.

State insurance regulators conduct periodic financial examinations of the books, records, accounts and business practices of insurers domiciled in their states, generally every three to five years. Financial examinations are generally carried out in cooperation with the insurance regulators of other states under guidelines promulgated by the NAIC. State and federal insurance and securities regulatory authorities and other state law enforcement agencies and attorneys general also from time to time make inquiries and conduct examinations or investigations regarding the compliance by our company, as well as other companies in our industry, with, among other things, insurance laws and securities laws.

State insurance regulators, the NAIC and other regulatory bodies are also investigating the use of affiliated captive reinsurers or off-shore entities to reinsure insurance risks and the NAIC has made recent advances in captive reform. In June 2014, the NAIC adopted a new regulatory framework for captives assuming business governed by Regulations XXX or AXXX, called the "Rector framework". In December 2014, the NAIC adopted Actuarial Guideline 48 (“AG48”) which established a new regulatory requirement applicable to XXX and AG38 reserves ceded to reinsurers, including affiliated reinsurers, as the first step in implementing the Rector framework. As adopted, AG48 limits the type of assets that may be used as collateral to cover the XXX and AG38 statutory reserves and is applied prospectively to existing reinsurance transactions that reinsure policies issued on or after January 1, 2015 and new reinsurance transactions entered into on or after January 1, 2015. The purpose of AG48 was to implement the substantive requirements of the Rector Framework, effective January 1, 2015, pending development and adoption by the states of the new term and Universal Life Insurance Reserve Financing Model Regulation (the "XXX/AXXX Regulation"). The NAIC charged multiple working groups with the responsibility to prepare the XXX/AXXX Regulation and in December 2016, the NAIC adopted the XXX/AXXX Regulation and amended AG48 to align its provisions with the XXX/AXXX Regulation. In 2014, the NAIC also considered a proposal to require states to apply NAIC accreditation standards, applicable to traditional insurers, to captive reinsurers. In 2015, the NAIC adopted such a proposal, in the form of a revised preamble to the NAIC accreditation standards (the "Standard"), with an effective date of January 1, 2016 for application of the Standard to captives that assume XXX or AXXX business. Under the Standard, a state will be deemed in compliance as it relates to XXX or AXXX captives if the applicable reinsurance transaction satisfies AG 48. In addition, the Standard applies prospectively, so that XXX or AXXX captives will not be subject to the Standard if reinsured policies were issued prior to January 1, 2015 and ceded so that they were part of a reinsurance arrangement as of December 31, 2014. The NAIC left for future action application of the Standard to captives that assume variable annuity business. As drafted, it appears that the Standard would apply to our affiliated Arizona captives, SLDI and its wholly owned subsidiary RRII.

During 2015, The NAIC Financial Conditions (E) Committee (the "E Committee") established the Variable Annuities Issues (E) Working Group ("VAIWG") to oversee the NAIC's efforts to study and address, as appropriate, regulatory issues resulting in variable annuity captive reinsurance transactions. In November 2015, upon recommendation of the VAIWG, the E Committee adopted a Variable Annuities Framework for Change (the "VA Framework for Change") which recommends charges for NAIC working groups to adjust the variable annuity statutory framework applicable to all insurers that have written or are writing variable

annuity business. The VA Framework for Change contemplates a holistic set of reforms that would improve the current reserve and capital framework and address root cause issues that result in the use of captive arrangements but would not mandate recapture by insurers of VA cessions to captives. In November 2015, the VAIWG engaged Oliver Wyman ("OW") to conduct a quantitative impact study involving industry participants including the Company, of various reforms outlined in the VA Framework for Change (the "QIS"). OW completed the QIS in July of 2016 and reported its initial findings to the VAIWG in late August. The OW report proposed certain revisions to the current VA reserve and capital framework and recommended a second quantitative impact study be conducted so that testing can inform the proper calibration for certain conceptual and/or preliminary parameters set out in the OW proposal. Following a public comment period in the fourth quarter of 2016 and several meetings on the OW proposal, the VAIWG determined that a second quantitative impact study (the "QIS2") involving industry participants, including us, will be conducted by OW. The QIS 2 began in February 2017 and is expected to be completed by September 2017, with NAIC deliberations on QIS2 results during the fourth quarter of 2017. Although the QIS timetable indicates the VAIWG expects to complete work in 2017, timing for implementation of changes to the current VA reserve and capital framework remains uncertain.

We cannot predict what revisions, if any, would be made to the XXX/AXXX Regulation or the Standard for application to captives that assume XXX or AXXX business, as states consider their adoption or undertake their implementation, to the VA Framework for Change proposal as a result of QIS2 and ongoing NAIC deliberations, or to the Standard, if adopted for variable annuity captives. It is also unclear whether these or other proposals will be adopted by the NAIC, or what additional actions and regulatory changes will result from the continued captives scrutiny and reform efforts by the NAIC and other regulatory bodies. We utilize affiliated captive insurers to satisfy certain statutory reserve requirements related to certain of our variable annuity contracts. If state insurance regulators determine to restrict our use of affiliated captive reinsurers, it could require us to increase statutory reserves, incur higher operating or tax costs or reduce sales. See "Item 1A. Risk Factors - Risks Related to Regulation - Our businesses are heavily regulated, and changes in regulation in the United States, enforcement actions and regulatory investigations may reduce profitability".

Insurance Holding Company Regulation

Because we are part of an affiliated group of companies, we are subject to the insurance holding company law of the State of Iowa, our state of domicile. State insurance holding company law generally requires each insurance company directly or indirectly owned by the holding company to register with the insurance regulator in the insurance company’s state of domicile and to furnish annually financial and other information about the operations of companies within the holding company system. Generally, all transactions affecting the insurers in the holding company system must be fair and reasonable and, if material, require prior notice and approval or non-disapproval by the state’s insurance regulator.

Change of Control. State insurance holding company regulations, including those of Iowa, generally provide that no person, corporation or other entity may acquire control of an insurance company, or a controlling interest in any parent company of an insurance company, without the prior approval of such insurance company’s domiciliary state insurance regulator. Under Iowa law, any person acquiring, directly or indirectly, 10% or more of the voting securities of an insurance company is presumed to have acquired “control” of the company. This statutory presumption of control may be rebutted by a showing that control does not exist in fact. Our Iowa insurance regulators, however, may find that “control” exists in circumstances in which a person owns or controls less than 10% of voting securities.

To obtain approval of any change in control, any proposed acquirer must file with the Iowa Division of Insurance an application disclosing, among other information, its background, financial condition, the financial condition of its affiliates, the source and amount of funds by which it will effect the acquisition, the criteria used in determining the nature and amount of consideration to be paid for the acquisition, proposed changes in the management and operations of the insurance company and other related matters.

Any purchaser of shares of common stock representing 10% or more of the voting power of our capital stock or that of Voya Financial, Inc. will be presumed to have acquired control of our Company unless, following application by that purchaser with the Iowa Division of Insurance, the Insurance Commissioner determines otherwise.

NAIC Amendments. In 2010, the NAIC adopted significant changes to the insurance holding company model act and regulations (the “NAIC Amendments”). The NAIC Amendments include a requirement that an insurance holding company system’s ultimate controlling person submit annually to its lead state insurance regulator an “enterprise risk report” that identifies activities, circumstances or events involving one or more affiliates of an insurer that, if not remedied properly, are likely to have a material adverse effect upon the financial condition or liquidity of the insurer or its insurance holding company system as a whole. The NAIC Amendments also include a provision requiring a controlling person to submit prior notice to its domiciliary insurance regulator of a divestiture of control. The NAIC Amendments must be adopted by the individual state legislatures and insurance regulators in order to be effective. Iowa adopted its version of the NAIC Amendments.

In addition, the NAIC has proposed a “Solvency Modernization Initiative” which focuses on: (1) capital requirements; (2) corporate governance and risk management; (3) group supervision; (4) statutory accounting and financial reporting; and (5) reinsurance. This initiative has resulted in the adoption by the NAIC in September 2012 of the Risk Management and Own Risk and Solvency Assessment Model Act ("ORSA"), which has been enacted by the Iowa legislature. ORSA requires that insurers maintain a risk management framework and conduct an internal own risk and solvency assessment of the insurer's material risks in normal and stressed environments. The assessment must be documented in a confidential annual summary report, a copy of which must be made available to regulators as required or upon request. In accordance with statutory requirements, Voya Financial, Inc. has prepared and submitted ORSA summary reports since 2015 on behalf of the consolidated enterprise to the Connecticut Insurance Department, the lead insurance regulator of Voya Financial, Inc.'s consolidated enterprise. This initiative also resulted in the adoption by the NAIC in August 2014 of the Corporate Governance Annual Filing Model Act, which requires insurers to make an annual confidential filing regarding their corporate governance policies. This new model has been enacted by the Iowa legislature and Voya Financial, Inc. submitted its first filing on behalf of the consolidated enterprise to the Connecticut Insurance Department in 2016.

Dividend Payment Restrictions. The insurance law of an insurance company’s state of domicile imposes certain restrictions on a domiciliary insurance company’s ability to pay dividends to its parent. These restrictions are based in part on the prior year’s statutory income and surplus. In general, dividends up to specified levels are considered ordinary and may be paid without prior approval. Dividends in larger amounts, or extraordinary dividends, are subject to approval by the insurance commissioner of the state of domicile of the insurance subsidiary proposing to pay the dividend. In addition, under Iowa insurance law, no dividend or other distribution exceeding an amount equal to an insurance company's earned surplus may be paid without the domiciliary insurance regulator's prior approval.

Financial Regulation

Policy and Contract Reserve Sufficiency Analysis. Under the laws and regulations of Iowa, we are required to conduct annual analyses of the sufficiency of our life and annuity statutory reserves. Other jurisdictions in which we are licensed may have certain reserve requirements that differ from our state of domicile. In each case, a qualified actuary must submit an opinion that states that the aggregate statutory reserves, when considered in light of the assets held with respect to such reserves, are sufficient to meet the insurer’s contractual obligations and related expenses. If such an opinion cannot be rendered, the affected insurer must set up additional statutory reserves by moving funds from available statutory surplus. We submit these opinions annually to applicable insurance regulatory authorities.

Recent actions by the NAIC. In recent years the NAIC has undertaken a process to redefine the reserve methodology for certain of our insurance liabilities under a framework known as Principles-Based Reserving (“PBR”). Under PBR, an insurer’s reserves are still required to be conservative, since a primary focus of SAP is the protection of policyholders, however, greater credence is given to the insurer’s realized past experience and anticipated future experience as well as to current economic conditions. An important part of the PBR framework was the adoption of AG43 as of December 31, 2009 for variable annuity guaranteed benefits.

Surplus and Capital Requirements. Insurance regulators have the discretionary authority, in connection with the ongoing licensing of insurance companies, to limit or prohibit the ability of an insurer to issue new policies if, in the regulators’ judgment, the insurer is not maintaining a minimum amount of surplus or is in hazardous financial condition. Insurance regulators may also limit the ability of an insurer to issue new life insurance policies and annuity contracts above an amount based upon the face amount and premiums of policies of a similar type issued in the prior year. We do not currently believe that the current or anticipated levels of our statutory surplus present a material risk that any such regulator would limit the amount of new policies that we may issue.

Risk-Based Capital. The NAIC has adopted risk-based capital ("RBC") requirements for life, health and property and casualty insurance companies. The requirements provide a method for analyzing the minimum amount of adjusted capital (statutory capital and surplus plus other adjustments) appropriate for an insurance company to support its overall business operations, taking into account the risk characteristics of the company’s assets, liabilities and certain off-balance sheet items. State insurance regulators use the RBC requirements as an early warning tool to identify possibly inadequately capitalized insurers. An insurance company found to have insufficient statutory capital based on its RBC ratio may be subject to varying levels of additional regulatory oversight depending on the level of capital inadequacy. As of December 31, 2016, our RBC exceeded statutory minimum RBC levels that would require any regulatory or corrective action.

The NAIC is currently working with the American Academy of Actuaries as they consider possible updates to the asset factors that are used to calculate the RBC requirements for the investment portfolio assets. The NAIC review may lead to an expansion in the number of NAIC asset class categories for factor-based RBC requirements and the adoption of new factors, which could

increase capital requirements on some securities and decrease capital requirements on others. We cannot predict what, if any, changes may result from this review or their potential impact on our RBC ratios. We will continue to monitor developments in this area.

IRIS Tests. The NAIC has developed a set of financial relationships or tests known as the Insurance Regulatory Information System ("IRIS") to assist state regulators in monitoring the financial condition of U.S. insurance companies and identifying companies requiring special attention or action. For IRIS ratio purposes, we submit data to the NAIC on an annual basis. The NAIC analyzes this data using prescribed financial data ratios. A ratio falling outside the prescribed "usual range" is not considered a failing result. Rather, unusual values are viewed as part of the regulatory early monitoring system. In many cases, it is not unusual for financially sound companies to have one or more ratios that fall outside the usual range.

Regulators typically investigate or monitor an insurance company if its IRIS ratios fall outside the prescribed usual range for four or more of the ratios, but each state has the right to inquire about any ratios falling outside the usual range. The inquiries made by state insurance regulators into an insurance company's IRIS ratios can take various forms.

Management does not anticipate regulatory action as a result of the 2016 IRIS ratio results. In all instances in prior years, regulators have been satisfied upon follow-up that no regulatory action was required. It is possible that similar results may not occur in the future.

Insurance Guaranty Associations. Each state has insurance guaranty association laws that require insurance companies doing business in the state to participate in various types of guaranty associations or other similar arrangements. The laws are designed to protect policyholders from losses under insurance policies issued by insurance companies that become impaired or insolvent. Typically, these associations levy assessments, up to prescribed limits, on member insurers on the basis of the member insurer's proportionate share of the business in the relevant jurisdiction in the lines of business in which the impaired or insolvent insurer is engaged. Some jurisdictions permit member insurers to recover assessments that they paid through full or partial premium tax offsets, usually over a period of years.

We accrue the cost of future guaranty fund assessments based on estimates of insurance company insolvencies provided by the National Organization of Life and Health Insurance Guaranty Associations and the amount of premiums written in each state. We have estimated this undiscounted liability to be $0.9 million and $1.2 million as of December 31, 2016 and 2015, respectively. We have also recorded an asset of $1.3 million and $1.7 million as of December 31, 2016 and 2015, respectively, for future credits to premium taxes. We estimate our liabilities for future assessments under state insurance guaranty association laws. We believe the reserves established are adequate for future assessments relating to insurance companies that are currently subject to insolvency proceedings.

Marketing and Sales

State insurance regulators have become more active in adopting and enforcing suitability standards with respect to sales of fixed, indexed and variable annuities. In particular, the NAIC has adopted a revised Suitability in Annuity Transactions Model Regulation ("SAT"), which will, if enacted by the states, place new responsibilities upon issuing insurance companies with respect to the suitability of annuity sales, including responsibilities for training agents. Many states have already taken action to adopt provisions based on the SAT.

Cybersecurity Regulatory Activity

The NAIC, other state and federal regulatory bodies and self-regulatory organizations like FINRA are focused on cybersecurity standards for the financial services industry and have issued guidance regarding cybersecurity standards and protocols. During 2017, we expect cybersecurity risk management, prioritization and reporting to continue to be an area of significant regulatory focus by such regulatory bodies and self-regulatory organizations.

Federal Initiatives Affecting Insurance Operations

The U.S. federal government generally does not directly regulate the insurance business. However, the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act") established the Federal Stability Oversight Council ("FSOC"), which is authorized to designate non-bank financial companies as systemically significant and accordingly subject such companies to regulation and supervision by the Board of Governors of the Federal Reserve System (the "Federal Reserve") if the FSOC determines that material financial distress at the company or the scope of the company's activities could pose a threat to the financial

stability of the U.S. See "--Financial Reform Legislation and Initiatives -- Dodd-Frank Wall Street Reform and Consumer Protection Act" below.

The Dodd-Frank Act also established FIO within the United States Department of the Treasury (“Treasury Department”). While not having a general supervisory or regulatory authority over the business of insurance, the director of this office performs various functions with respect to insurance, including serving as a non-voting member of the FSOC, making recommendations to the FSOC regarding insurers to be designated for more stringent regulation as a nonbank financial entity supervised by the Federal Reserve and representing the U.S. in the negotiation of international insurance agreements with foreign insurance regulators. The Dodd-Frank Act also required the director of FIO to conduct a study on how to modernize and improve the system of insurance regulation in the United States and that report was issued in December 2013. FIO has an ongoing charge to monitor all aspects of the insurance industry and state insurance regulatory developments, including those called for in its modernization report and present options for federal involvement if deemed necessary. There is substantial uncertainty as to whether aspects of the Dodd-Frank Act or regulatory bodies established thereunder will be impacted by regulatory or legislative changes made by the Trump administration or Congress.

Federal legislation and administrative policies in several areas can significantly and adversely affect insurance companies. These areas include federal health care regulation, pension regulation, financial services regulation, federal tax laws relating to life insurance companies and their products and the USA PATRIOT Act of 2001 (the “Patriot Act”) requiring, among other things, the establishment of anti-money laundering monitoring programs.

While too early to meaningfully assess the prospects of specific federal measures, and their application to us, the interplay between the federal legislative agenda advanced by Congressional Republicans and that of the Trump administration may significantly affect the insurance business, including measures that would change the tax treatment of insurance products relative to other financial products, simplify tax-advantaged or tax-exempt savings and retirement vehicles, restructure the corporate income tax provisions, or modify or eliminate the estate tax.

Regulation of Annuity Products

Our annuity products are subject to federal and state tax, securities, fiduciary, insurance and other laws and regulations. The SEC, the Financial Industry Regulatory Authority ("FINRA"), state securities commissions, state insurance departments and the Department of Labor (“DOL”) and the Treasury Department are the principal regulators that regulate these products. The Dodd-Frank Act may also impact our annuity operations. See “Financial Reform Legislation and Initiatives-Dodd-Frank Wall Street Reform and Consumer Protection Act” below.

We sell variable annuities that are registered with the SEC as securities under the Securities Act of 1933, as amended (the “Securities Act”) and are subject to regulation by the SEC and FINRA. In addition, certain fixed and indexed annuities we may offer are registered as securities under the Securities Act. The variable annuity products are issued through separate accounts and some of the separate accounts are registered as investment companies under the Investment Company Act of 1940 (the “Investment Company Act”), and are regulated by state law. Each separate account is generally divided into sub-accounts, each of which invests in an underlying mutual fund which is itself a registered investment company under the Investment Company Act. Such mutual funds, and in certain states, our variable annuity products, are subject to filing and other requirements under state securities laws. Federal and state securities laws and regulations are primarily intended to protect investors and generally grant broad rulemaking and enforcement powers to regulatory agencies. Federal and state securities regulatory authorities and FINRA from time to time make inquiries and conduct examinations regarding compliance by us and our affiliates with securities and other laws and regulations.

Distribution of our annuity products registered as securities are affected by laws and regulations applicable to broker-dealers. Pursuant to the Dodd-Frank Act, the SEC is authorized to establish a standard of conduct applicable to brokers and dealers whereby they would be required to act in the best interest of the customer without regard to the financial or other interest of the broker or dealer when providing personalized investment advice to retail and other customers. A January 2011 SEC study acknowledges that the offering of proprietary products would not be a per se violation of any such standard of care and that broker-dealers selling proprietary or a limited range of products could be permitted to make certain disclosures about their limited product offerings and obtain customer consents or acknowledgments. The SEC has not yet decided whether to propose rules creating a uniform standard of conduct applicable to broker-dealers and investment advisers.

In April 2016, the Department of Labor (“DOL”) issued a final rule that will broaden the definition of “fiduciary” for purposes of Employment Retirement Income Security Act (“ERISA”) and the Internal Revenue Code, as it applies to a person or entity providing investment advice with respect to ERISA plans or IRAs. The rule expands the circumstances in which providers of investment advice to ERISA plan sponsors and plan participants, and IRA investors, are deemed to act in a fiduciary capacity. The rule requires

such providers to act in their clients' "best interests", not influenced by any conflicts of interest, including due to the direct or indirect receipt of compensation that varies based on the fiduciary's investment recommendation. The rule is scheduled to take effect on April 10, 2017, but, as described below, it is currently uncertain whether the rule will be delayed, amended or repealed. If and when the rule takes effect, certain business activities in which we currently engage, such as IRA rollovers and other IRA sales, will become subject to a heightened fiduciary standard. Where VIAC is deemed to act in a fiduciary capacity, we will in certain cases need to either modify our sale and compensation practices or find an applicable exemption.

The DOL concurrently adopted a "best interest contract exemption" ("BIC") intended to enable continuation of certain existing industry practices relating to receipt of commissions and other compensation. We expect this exemption to go into effect only if the rule does. While this exemption would enable us and our distributors to continue many historical practices - subject, among other things, to a heightened best interests standard and a requirement that compensation be "reasonable" - there are practical difficulties with relying on the exemption that we believe will limit its utility in certain markets, particularly the retail annuities market, where many of our current distributors are not able to rely on exemption because they do not do business through regulated financial institutions. While it is too early to predict what impact this would have on our annuities and other businesses, we may experience a material decline in sales of products that can only be practicably sold in reliance on the BIC, such as variable annuities and fixed indexed annuities.

In addition, the rule may make it easier for the DOL in enforcement actions, and for plaintiffs' attorneys in litigation to attempt to extend fiduciary status to, or to claim fiduciary or contractual breach by, advisors who would not be deemed fiduciaries under current regulations. Compliance with the proposed rule could also increase our overall operational costs for providing some of the services we currently provide.

President Trump issued a directive in February 2017 requiring the DOL to take certain actions with respect to the rule, which may result in its revision or a delay in its implementation beyond its April 10, 2017 first applicability date. On March 2, 2017 the DOL published in the Federal Register (i) a proposal to delay applicability of the rule for 60 days beyond April 10, 2017, which is subject to a 15-day notice-and-comment period, and (ii) a request for comments on whether and how the rule should be modified in furtherance of the presidential directive, which is subject to a 45-day notice and comment period. It is unclear whether the DOL will delay applicability of the rule after the close of the 15-day comment period, and whether, or to what extent, the DOL will revise the rule after the close of the 45-day comment period. On March 10, 2017, the DOL announced a temporary policy to not enforce compliance with the rule for a transition period while the DOL considers the proposed delay described above. This policy does not, however, extend to the enforcement of the rule with respect to IRAs or private rights of action, and therefore appears to provide incomplete relief in the event a delay is not finalized prior to April 10, 2017.

Financial Reform Legislation and Initiatives

Dodd-Frank Wall Street Reform and Consumer Protection Act

On July 21, 2010, President Obama signed into law the Dodd-Frank Act, which effects comprehensive changes to the regulation of financial services in the United States. The Dodd-Frank Act directs existing and newly-created government agencies and bodies to perform studies and promulgate a multitude of regulations implementing the law, a process that has substantially advanced but is not yet complete. While some studies have already been completed and the rule-making process is well underway, there continues to be uncertainty regarding the results of ongoing studies and the ultimate requirements of regulations that have not yet been adopted. Although the new presidential administration has indicated a desire to revise or reverse some of its provisions, the fate of these proposals is unclear, and we cannot predict with certainty how the Dodd-Frank Act will continue to affect the financial markets generally, or impact our business, ratings, results of operations, cash flows or financial condition.

The Dodd-Frank Act created a new agency, the FSOC, which is authorized to subject nonbank financial companies to the supervision of the Federal Reserve if the FSOC determines that, among other matters, material financial distress at the company or the scope of the company's activities could pose risks to the financial stability of the United States. If we or Voya Financial, Inc. were designated by the FSOC as a systemically significant nonbank financial company subject to supervision by the Federal Reserve, we would become subject to a comprehensive system of prudential regulation, including minimum capital requirements, liquidity standards, credit exposure requirements, overall risk management requirements, management interlock prohibitions, a requirement to maintain a plan for rapid and orderly dissolution in the event of severe financial distress, stress testing, and additional fees and assessments and restrictions on proprietary trading and certain investments. The exact scope and consequences of these standards and requirements are subject to ongoing rulemaking activity by various federal banking regulators and therefore are currently unclear. However, this comprehensive system of prudential regulation, if applied to Voya Financial, Inc. or us, would significantly impact the manner in which we operate and could materially and adversely impact the profitability of one or more of our business lines or the level of capital required to support our activities. In designating non-bank financial companies for heightened prudential

regulation by the Federal Reserve, the FSOC considers, among other matters, the scope, size and potential impact of their activities on the financial stability of the United States.

In addition, the Dodd-Frank Act contains numerous other provisions, some of which may have an impact on us. These include:

- The FSOC may recommend that state insurance regulators or other regulators apply new or heightened standards and safeguards for activities or practices we and other insurers or other financial services companies engage in if the FSOC determines that those activities or practices could create or increase the risk that significant liquidity, credit or other problems spread among financial companies. We cannot predict whether any such recommendations will be made or their effect on our business, results of operations, cash flows or financial condition.

- The Dodd-Frank Act creates a new framework for regulating over-the-counter ("OTC") derivatives, which may increase the costs of hedging and other permitted derivatives trading activity undertaken by us. Under the new regulatory regime and subject to certain exceptions, certain standardized OTC interest rate and credit derivatives must now be cleared through a centralized clearinghouse and executed on a centralized exchange or execution facility, and the CFTC and the SEC may designate additional types of OTC derivatives for mandatory clearing and trade execution requirements in the future. In addition to mandatory central clearing and trade execution of certain OTC derivatives, market participants like us are or will be (directly or indirectly) subject to regulatory requirements which may include reporting and recordkeeping, and capital and margin requirements. Specifically, in October 2015, federal banking regulators issued final rules establishing minimum margin requirements for non-centrally cleared derivatives with swaps entities that they prudentially regulate, which includes many of the swap dealers that transact derivatives with us. Similarly, in December 2015, the CFTC issued final rules establishing nearly identical margin requirements with swap dealers that are not otherwise subject to regulation by the federal banking regulators, which includes many non-bank swap dealers that transact derivatives with us. Both the CFTC and prudential regulator margin rules require the exchange of initial and variation margin for non-centrally cleared derivatives with certain types of counterparties, including financial end users like us. In addition to initial margin on centrally cleared swaps required under Dodd-Frank since 2013, the margin rules for OTC swaps will require posting of initial margin for most non-centrally cleared derivatives transacted by us commencing in 2020 as well as variation margin commencing in 2017. As a result of the transition to central clearing and the new regulatory regime governing OTC derivatives (especially margin requirements for non-centrally cleared derivatives), we will be required to hold more cash and highly liquid securities resulting in lower yields. In addition, increased capital charges imposed by regulators on non-cash collateral held by bank counterparties and central clearinghouses is expected to result in higher hedging costs, causing a reduction in income from investments. These developments present potentially significant business, liquidity and operational risk for us which could materially and adversely impact both the cost and our ability to effectively hedge various risks, including equity, interest rate, currency and duration risks within many of our insurance and annuity products and investment portfolios. In addition, inconsistencies between the Dodd-Frank Act regime and parallel regimes in other jurisdictions, such as the EU, may further increase costs of hedging or inhibit our ability to access market liquidity in those other jurisdictions.

- The Dodd-Frank Act established FIO within the Treasury Department to be headed by a director appointed by the Secretary of the Treasury. See "Insurance Regulation-Federal Initiatives Affecting Insurance Operations" above.

- The Dodd-Frank Act includes various securities law reforms that may affect our business practices and the liabilities and/or exposures associated therewith. See "Regulation of Annuity Products" above.

Until final regulations are promulgated pursuant to the Dodd-Frank Act, the full impact of the Dodd-Frank Act on our businesses, products, results of operation and financial condition will remain unclear. Additionally, there is substantial uncertainty as to whether aspects of the Dodd-Frank Act or regulatory bodies established thereunder will be impacted by regulatory or legislative changes made by the Trump administration or Congress.

Other Laws and Regulations

USA Patriot Act

The Patriot Act contains anti-money laundering and financial transparency laws applicable to broker-dealers and other financial services companies, including insurance companies. The Patriot Act seeks to promote cooperation among financial institutions, regulators and law enforcement entities in identifying parties that may be involved in terrorism or money laundering. Anti-money laundering laws outside of the United States contain provisions that may be different, conflicting or more rigorous. Internal practices, procedures and controls are required to meet the increased obligations of financial institutions to identify their customers, watch

for and report suspicious transactions, respond to requests for information by regulatory authorities and law enforcement agencies and share information with other financial institutions.

We are also required to follow certain economic and trade sanctions programs administered by the Office of Foreign Asset Control that prohibit or restrict transactions with suspected countries, their governments and, in certain circumstances, their nationals. We are also subject to regulations governing bribery and other anti-corruption measures.

Privacy Laws and Regulation

U.S. federal and state laws and regulations require financial institutions, including insurance companies, to protect the security and confidentiality of personal information and to notify consumers about their policies and practices relating to their collection and disclosure of consumer information and the protection of the security and confidentiality of that information. The disclosure and security of protected health information is also governed by federal and state laws. In particular, regulations promulgated by the U.S. Department of Health and Human Services regulate the disclosure and use of protected health information by health insurers and others (including life insurers), the physical and procedural safeguards employed to protect the security of that information and the electronic transmission of such information. Federal and state laws require notice to affected individuals, law enforcement, regulators and others if there is a breach of the security of certain personal information, including social security numbers, and require holders of certain personal information to protect the security of the data. Federal regulations require financial institutions to implement effective programs to detect, prevent and mitigate identity theft. Federal and state laws and regulations regulate the ability of financial institutions to make telemarketing calls and to send unsolicited e-mail or fax messages to consumers and customers. Federal laws and regulations also regulate the permissible uses of certain types of personal information, including consumer report information. Federal and state governments and regulatory bodies may consider additional or more detailed regulation regarding these subjects.

Environmental Considerations

Our ownership and operation of real property and properties within our commercial mortgage loan portfolio is subject to federal, state and local environmental laws and regulations. Risks of hidden environmental liabilities and the costs of any required clean-up are inherent in owning and operating real property. Under the laws of certain states, contamination of a property may give rise to a lien on the property to secure recovery of the costs of clean-up, which could adversely affect the valuation of, and increase the liabilities associated with, the commercial mortgage loans we hold. In several states, this lien has priority over the lien of an existing mortgage against such property. In addition, we may be liable, in certain circumstances, as an “owner” or “operator,” for costs of cleaning-up releases or threatened releases of hazardous substances at a property mortgaged to us under the federal Comprehensive Environmental Response, Compensation and Liability Act of 1980 and the laws of certain states. Application of various other federal and state environmental laws could also result in the imposition of liability on us for costs associated with environmental hazards.

We routinely conduct environmental assessments prior to closing any new commercial mortgage loans or to taking title to real estate. Although unexpected environmental liabilities can always arise, we seek to minimize this risk by undertaking these environmental assessments and complying with our internal environmental policies and procedures.

Item 1A. Risk Factors
(Dollar amounts in millions, unless otherwise stated)

We face a variety of risks that are substantial and inherent in our business, including market, liquidity, credit, operational, legal, regulatory and reputational risks. The following are some of the more important factors that could affect our business.

Risks Related to Our Business - General

Continued difficult conditions in the global capital markets and the economy generally have affected and may continue to affect our business, results of operations and financial condition.

Our business and results of operations are materially affected by conditions in the global capital markets and the economy generally. Slowing growth rates globally and the uncertain consequences of changing monetary policies among the world's large central banks could create economic disruption, decrease asset prices, increase market volatility and potentially affect the availability and cost of credit.

Although we carry out business almost exclusively in the United States, we are affected by both domestic and international macroeconomic developments. In the short and medium term, the U.S. market faces difficulties that include persistent weakness in economic growth, volatility in asset prices and questions surrounding the monetary policy being pursued by the Federal Open Market Committee ("FOMC") of the Federal Reserve, which has gradually begun to tighten. In the longer term, concerns persist around the long-term sustainability of the nation’s debt profile, especially given expectations regarding future entitlement spending and persistent budget deficits, the effect on the financial system of the significant regulatory changes enacted in the aftermath of the 2008-09 financial crisis, and the consequences of potentially significant changes to Federal legislation, in particular with respect to tax and fiscal policy.

In particular, the results of the November 2016 U.S. presidential and congressional elections could give rise to significant changes in U.S. economic and foreign policy, including with respect to trade, immigration, and military engagements, any or all of which could have a material impact on global financial markets and economic conditions.

Internationally, slowing levels of growth in developing markets, in particular in China, could have significant adverse consequences for the level of global economic activity, and on commodity and other asset markets. To the extent this results in falling commodity and energy prices, significant dislocations in global credit and currency markets may occur, as the consequences of lower prices, revenues and asset prices are felt by borrowers and exporters, and in turn creditors and investors. In addition, the Chinese market faces concerns surrounding the stability of its credit, equity and real estate markets, and any crisis in these markets could have global consequences.

In Europe, concerns regarding the economic and fiscal viability of countries such as Greece continue to contribute to long-term structural headwinds in the Eurozone, and significant concerns persist regarding the sovereign debt of Greece and certain other Eurozone countries. In recent times, political events have increasingly threatened the cohesiveness of the European Union, and are likely to result in the cessation or rollback of the political and economic integration of Europe that has occurred over the past several decades. In particular, the results of the "Brexit" referendum held by the United Kingdom in 2016 and the U.K. government’s declared intention to withdraw from the EU could have substantial adverse consequences for the U.K. and European economies. The financial and political turmoil in Europe continues to be a long-term threat to global capital markets and remains a challenge to global financial stability. If countries, such as Greece, require additional financial support or if their sovereign credit ratings decline further, yields on such sovereign debt may increase, the cost of borrowing may increase and the availability of credit may become more limited. Additionally, the possibility of capital market volatility spreading through a highly integrated and interdependent banking system remains elevated. In the event of any default or similar event with respect to a sovereign issuer, some financial institutions may suffer significant losses for which they would require additional capital, which may not be available.

In 2015, the FOMC began to tighten U.S. monetary policy as it seeks to gradually reverse programs and policies that have, in recent years, fostered a historically low interest rate environment. The effect of this effort, and the novel mechanism through which the FOMC is implementing it, remains uncertain, and could include increased volatility in debt, equity, currency and commodity markets. As the FOMC moves towards normalizing monetary policy and moving short-term interest rates off of their lower bound, the central bank may adversely affect prospects for continued economic recovery with little headroom for incremental monetary accommodation. Any increase in interest rates resulting from the FOMC's monetary policy would generally result in declining values for fixed income investments, including those we hold in our investment portfolio. A failure to successfully implement a tightening policy, on the other hand, could lead to a continued persistence of low interest rates and an associated adverse effect on

certain of our long-dated liabilities and the reserves we are required to hold against them. Our results of operations, investment portfolio and AUM are exposed to these risks and may be adversely affected as a result.

More generally, the international system has in recent years faced heightened geopolitical risk, most notably in Eastern Europe and the Middle East, but also in Africa and Southeast Asia, and events in any one of these regions could give rise to an increase in market volatility or a decrease in global economic output.

Even in the absence of a market downturn, our annuity, retirement and investment products, as well as our investment returns and our access to and cost of financing, are sensitive to equity, fixed income, real estate and other market fluctuations and general economic and political conditions. These fluctuations and conditions could materially and adversely affect our results of operations, financial condition and liquidity, including in the following respects:

- We provide a number of annuity, retirement and investment products that expose us to risks associated with fluctuations in interest rates, market indices, securities prices, default rates, the value of real estate assets, currency exchange rates and credit spreads. The profitability of many of our annuity, retirement and investment products depends in part on the value of the general accounts and separate accounts supporting them, which may fluctuate substantially depending on the foregoing conditions.
- Volatility or downturns in the equity markets can cause a reduction in fee income on annuity products. Because these products generate fees related primarily to the value of AUM, a decline in the equity markets could reduce our revenues.
- A change in market conditions, including prolonged periods of high or low inflation or interest rates, could cause a change in consumer sentiment and adversely affect sales and could cause the actual persistency of these products to vary from their anticipated persistency (the probability that a product will remain in force from one period to the next) and adversely affect profitability. Changing economic conditions or adverse public perception of financial institutions can influence customer behavior, which can result in, among other things, an increase or decrease in claims, lapses, withdrawals, deposits or surrenders in certain products, any of which could adversely affect profitability.
- An equity market decline, decreases in prevailing interest rates or a prolonged period of low interest rates could result in the value of guaranteed minimum benefits contained in certain of our life insurance, annuity and retirement products being higher than current account values or higher than anticipated in our pricing assumptions, requiring us to materially increase reserves for such products, and may result in a decrease in customer lapses, thereby increasing the cost to us. In addition, such a scenario could lead to increased amortization and/or unfavorable unlocking of our deferred acquisition costs ("DAC") and value of business acquired ("VOBA").
- We have significant investment and derivative portfolios that include, among other investments, corporate securities, asset-backed securities ("ABS"), equities and commercial mortgages. Economic conditions as well as adverse capital market and credit conditions, interest rate changes, changes in mortgage prepayment behavior or declines in the value of underlying collateral will impact the credit quality, liquidity and value of our investment and derivative portfolios, potentially resulting in higher capital charges and unrealized or realized losses and decreased investment income. The value of our investments and derivative portfolios may also be impacted by reductions in price transparency, changes in the assumptions or methodology we use to estimate fair value and changes in investor confidence or preferences, which could potentially result in higher realized or unrealized losses and have a material adverse effect on our results of operations or financial condition. Market volatility may also make it difficult to value certain of our securities if trading becomes less frequent.
- Market conditions determine the availability and cost of the reinsurance protection we purchase and may result in additional expenses for reinsurance or an inability to obtain sufficient reinsurance on acceptable terms, which could adversely affect the profitability of future business and the availability of capital to support new sales.
- Hedging instruments we use to manage product and other risks might not perform as intended or expected, which could result in higher realized losses and unanticipated cash needs to collateralize or settle such transactions. Adverse market conditions can limit the availability and increase the costs of hedging instruments, and such costs may not be recovered in the pricing of the underlying products being hedged. In addition, hedging counterparties may fail to perform their obligations resulting in unhedged exposures and losses on positions that are not collateralized.
- Regardless of market conditions, certain investments we hold, including privately placed fixed income investments, investments in private equity funds and commercial mortgages, are relatively illiquid. If we need to sell these investments, we may have difficulty selling them in a timely manner or at a price equal to what we could otherwise realize by holding the investment to maturity.
- We are exposed to interest rate and equity risk based upon the discount rate and expected long-term rate of return assumptions associated with our pension and other retirement benefit obligations. Sustained declines in long-term interest rates or equity returns could have a negative effect on the funded status of these plans and/or increase our future funding costs.

- Fluctuations in our operating results and realized and unrealized gains and losses on our investment and derivative portfolio may impact our tax profile, our ability to optimally utilize tax attributes and our deferred income tax assets.
- A default by any financial institution or by a sovereign could lead to additional defaults by other market participants. The failure of a sufficiently large and influential institution could disrupt securities markets or clearance and settlement systems and lead to a chain of defaults, because the commercial and financial soundness of many financial institutions may be closely related as a result of credit, trading, clearing or other relationships. Even the perceived lack of creditworthiness of a counterparty may lead to market-wide liquidity problems and losses or defaults by us or by other institutions. This risk is sometimes referred to as "systemic risk" and may adversely affect financial intermediaries, such as clearing agencies, clearing houses, banks, securities firms and exchanges with which we interact on a daily basis. Systemic risk could have a material adverse effect on our ability to raise new funding and on our business, results of operations, financial condition, liquidity and/or business prospects. In addition, such a failure could impact future product sales as a potential result of reduced confidence in the financial services industry. Regulatory changes implemented to address systemic risk could also cause market participants to curtail their participation in certain market activities, which could decrease market liquidity and increase trading and other costs.
- Widening credit spreads, if not offset by equal or greater declines in the risk-free interest rate, would also cause the total interest rate payable on newly issued securities to increase, and thus would have the same effect as an increase in underlying interest rates with respect to the valuation of our current portfolio.

To the extent that any of the foregoing risks were to emerge in a manner that adversely affected general economic conditions, financial markets, or the markets for our products and services, our financial condition, liquidity, and results of operations could be materially adversely affected.

Adverse capital and credit market conditions may impact our ability to access liquidity and capital, as well as the cost of credit and capital.

Adverse capital market conditions may affect the availability and cost of borrowed funds, thereby impacting our ability to support or grow our businesses. We need liquidity to pay our operating expenses, interest on our debt and dividends to our parent, to maintain our securities lending activities and to replace certain maturing liabilities. Without sufficient liquidity, we will be forced to curtail our operations and our business will suffer. Our principal sources of liquidity are insurance premiums and fees, annuity deposits and cash flow from investments and assets.

In the event current resources do not satisfy our needs, we may have to seek additional financing. The availability of additional financing will depend on a variety of factors such as market conditions, the general availability of credit, the volume of trading activities, the overall availability of credit to the financial services industry and our credit ratings and credit capacity, as well as the possibility that customers or lenders could develop a negative perception of our long- or short-term financial prospects. Similarly, our access to funds may be limited if regulatory authorities or rating agencies take negative actions against us. If our internal sources of liquidity prove to be insufficient, there is a risk that we may not be able to successfully obtain additional financing on favorable terms, or at all. Any actions we might take to access financing may cause rating agencies to reevaluate our ratings.

Disruptions, uncertainty or volatility in the capital and credit markets may also limit our access to capital. Such market conditions may in the future limit our ability to raise additional capital to support business growth, or to counter-balance the consequences of losses or increased regulatory reserves and rating agency capital requirements. This would have the potential to decrease both our profitability and our financial flexibility. Our results of operations, financial condition, liquidity, statutory capital and rating agency capital position could be materially and adversely affected by disruptions in the financial markets.

The level of interest rates may adversely affect our profitability, particularly in the event of a continuation of the current low interest rate environment or a period of rapidly increasing interest rates.

During periods of declining interest rates or a prolonged period of low interest rates, life insurance and annuity products may be relatively more attractive to consumers due to minimum guarantees that are frequently mandated by regulators, resulting in increased premium payments on products with flexible premium features and a higher percentage of insurance and annuity contracts remaining in force from year-to-year than we anticipated in our pricing, potentially resulting in greater claims costs than we expected and asset/liability cash flow mismatches. A decrease in interest rates or a prolonged period of low interest rates may also require additional provisions for guarantees included in life insurance and annuity contracts, as the guarantees become more valuable to policyholders. During a period of decreasing interest rates or a prolonged period of low interest rates, our investment earnings may decrease because the interest earnings on our recently purchased fixed income investments will likely have declined in parallel with market interest rates. In addition, a prolonged low interest rate period may result in higher costs for certain derivative instruments that may be used to hedge certain of our product risks. RMBS and callable fixed income securities in our investment

portfolios will be more likely to be prepaid or redeemed as borrowers seek to borrow at lower interest rates. Consequently, we may be required to reinvest the proceeds in securities bearing lower interest rates. Accordingly, during periods of declining interest rates, our profitability may suffer as the result of a decrease in the spread between interest rates credited to policyholders and contract owners and returns on our investment portfolios. An extended period of declining or prolonged low interest rates or a prolonged period of low interest rates may also cause us to change our long-term view of the interest rates that we can earn on our investments. Such a change in our view would cause us to change the long-term interest rate that we assume in our calculation of insurance assets and liabilities under U.S. GAAP. We most recently made such a downward revision in the third quarter of 2016. Any future revision would result in increased reserves, accelerated amortization of DAC and other unfavorable consequences, which would be incremental to those consequences recorded in connection with the most recent revision. In addition, certain statutory capital and reserve requirements are based on formulas or models that consider interest rates, and an extended period of low interest rates may increase the statutory capital we are required to hold and the amount of assets we must maintain to support statutory reserves.

We believe a continuation of the current low interest rate environment would also negatively affect our financial performance. In addition, we expect that a continuation of the current low interest rate environment would reduce our Company's risk-based capital ratio in an amount that could be material.

Conversely, in periods of rapidly increasing interest rates, policy loans, and withdrawals from, and/or surrenders of, life insurance and annuity contracts and certain funding agreements may increase as policyholders choose to seek higher investment returns. Obtaining cash to satisfy these obligations may require us to liquidate fixed income investments at a time when market prices for those assets are depressed because of increases in interest rates. This may result in realized investment losses. Regardless of whether we realize an investment loss, such cash payments would result in a decrease in total invested assets and may decrease our net income and capitalization levels. Premature withdrawals may also cause us to accelerate amortization of DAC, which would also reduce our net income. An increase in market interest rates could also have a material adverse effect on the value of our investment portfolio by, for example, decreasing the estimated fair values of the fixed income securities within our investment portfolio. An increase in market interest rates could also create a significant collateral posting requirement associated with our interest rate hedge programs and Federal Home Loan Bank ("FHLB") funding agreements, which could materially and adversely affect liquidity. In addition, an increase in market interest rates could require us to pay higher interest rates on debt securities we may issue in the financial markets from time to time to finance our operations, which would increase our interest expenses and reduce our results of operations. An increase in interest rates could result in decreased fee income associated with a decline in the value of variable annuity account balances invested in fixed income funds, which also might affect the value of the underlying guarantees within these variable annuities. Lastly, certain statutory reserve requirements are based on formulas or models that consider forward interest rates and an increase in forward interest rates may increase the statutory reserves we are required to hold thereby reducing statutory capital.

Changes in prevailing interest rates may negatively affect our business including the level of net interest margin we earn. In a period of changing interest rates, interest expense may increase and interest credited to policyholders may change at different rates than the interest earned on assets. Accordingly, changes in interest rates could decrease net interest margin. Changes in interest rates may negatively affect the value of our assets and our ability to realize gains or avoid losses from the sale of those assets, all of which also ultimately affect earnings. In addition, our insurance and annuity products and certain of our retirement and investment products are sensitive to inflation rate fluctuations. A sustained increase in the inflation rate in our principal markets may also negatively affect our business, financial condition and results of operation. For example, a sustained increase in the inflation rate may result in an increase in nominal market interest rates. A failure to accurately anticipate higher inflation and factor it into our product pricing assumptions may result in mispricing of our products, which could materially and adversely impact our results of operations.

A downgrade or a potential downgrade in our financial strength or credit ratings could result in a loss of business and adversely affect our results of operations and financial condition.

Ratings are important to our business. Credit ratings represent the opinions of rating agencies regarding an entity's ability to repay its indebtedness. Our credit ratings are important to our ability to raise capital through the issuance of debt and to the cost of such financing. Financial strength ratings, which are sometimes referred to as "claims-paying" ratings, represent the opinions of rating agencies regarding the financial ability of an insurance company to meet its obligations under an insurance policy. Financial strength ratings are important factors affecting public confidence in insurers. Our financial strength ratings are important to our ability to sell our products and services to our customers. Ratings are not recommendations to buy our securities. Each of the rating agencies reviews its ratings periodically, and our current ratings may not be maintained in the future.

Our ratings could be downgraded at any time and without notice by any rating agency. For a description of material rating actions that have occurred from the end of 2015 through the date of this Annual Report on Form 10-K, see "Item 7. Management's Narrative Analysis of the Results of Operations and Financial Condition-Liquidity and Capital Resources-Ratings."

A downgrade of our financial strength rating could affect our competitive position by making it more difficult for us to market our products as potential customers may select companies with higher financial strength ratings and by leading to increased withdrawals by current customers seeking companies with higher financial strength ratings. This could lead to a decrease in AUM and result in lower fee income. Furthermore, sales of assets to meet customer withdrawal demands could also result in losses, depending on market conditions. In addition, a downgrade in either our financial strength or credit ratings could potentially, among other things, increase our borrowing costs and make it more difficult to access financing; adversely affect the availability of LOCs and other financial guarantees; result in additional collateral requirements, or other required payments or termination rights under derivative contracts or other agreements; and/or impair, or cause the termination of, our relationships with creditors, broker-dealers, distributors, reinsurers or trading counterparties, which could potentially negatively affect our profitability, liquidity and/or capital. In addition, we use assumptions of market participants in estimating the fair value of our liabilities, including insurance liabilities that are classified as embedded derivatives under U.S. GAAP. These assumptions include our nonperformance risk (i.e., the risk that the obligations will not be fulfilled). Therefore, changes in our credit or financial strength ratings or the credit or financial strength ratings of Voya Financial, Inc. may affect the fair value of our liabilities.

As rating agencies continue to evaluate the financial services industry, it is possible that rating agencies will heighten the level of scrutiny that they apply to financial institutions, increase the frequency and scope of their credit reviews, request additional information from the companies that they rate and potentially adjust upward the capital and other requirements employed in the rating agency models for maintenance of certain ratings levels. It is possible that the outcome of any such review of us would have additional adverse ratings consequences, which could have a material adverse effect on our results of operations, financial condition and liquidity. We may need to take actions in response to changing standards or capital requirements set by any of the rating agencies which could cause our business and operations to suffer. We cannot predict what additional actions rating agencies may take, or what actions we may take in response to the actions of rating agencies.

Because we operate in highly competitive markets, we may not be able to increase or maintain our market share, which may have an adverse effect on our results of operations and financial condition.

In each of our businesses we face intense competition, including from domestic and foreign insurance companies, broker-dealers, financial advisors, asset managers and diversified financial institutions, banks, technology companies and start-up financial services providers, both for the ultimate customers for our products and for distribution through independent distribution channels. We compete based on a number of factors including brand recognition, reputation, quality of service, quality of investment advice, investment performance of our products, product features, scope of distribution, price, perceived financial strength and credit ratings, scale and level of customer service. A decline in our competitive position as to one or more of these factors could adversely affect our profitability. In addition, we may in the future sacrifice our competitive or market position in order to improve our profitability. Many of our competitors are large and well-established and some have greater market share or breadth of distribution, offer a broader range of products, services or features, assume a greater level of risk, or have higher claims-paying or credit ratings than we do. Furthermore, the preferences of the end consumers for our products and services may shift, including as a result of technological innovations affecting the marketplaces in which we operate. To the extent our competitors are more successful than we are at adopting new technology and adapting to the changing preferences of the marketplace, our competitiveness may decline.

In recent years, there has been substantial consolidation among companies in the financial services industry resulting in increased competition from large, well-capitalized financial services firms. Future economic turmoil may accelerate additional consolidation activity. Many of our competitors also have been able to increase their distribution systems through mergers, acquisitions, partnerships or other contractual arrangements. Furthermore, larger competitors may have lower operating costs and have an ability to absorb greater risk, while maintaining financial strength ratings, allowing them to price products more competitively. These competitive pressures could result in increased pressure on the pricing of certain of our products and services, and could harm our ability to maintain or increase profitability. In addition, if our financial strength and credit ratings are lower than our competitors, we may experience increased surrenders and/or a significant decline in sales. The competitive landscape in which we operate may be further affected by the government sponsored programs or regulatory changes in the United States and similar governmental actions outside of the United States. Competitors that receive governmental financing, guarantees or other assistance, or that are not subject to the same regulatory constraints, may have or obtain pricing or other competitive advantages. Due to the competitive nature of the financial services industry, there can be no assurance that we will continue to effectively compete within the industry or that competition will not have a material adverse impact on our business, results of operations and financial condition.

Our risk management policies and procedures, including hedge programs, may prove inadequate for the risks we face, which could negatively affect our business and financial condition or result in losses.

We have developed risk management policies and procedures, including hedge programs that utilize derivative financial instruments, and expect to continue to do so in the future. Nonetheless, our policies and procedures to identify, monitor and manage risks may not be fully effective, particularly during extremely turbulent times. Many of our methods of managing risk and exposures are based upon observed historical market behavior or statistics based on historical models. As a result, these methods may not predict future exposures, which could be significantly greater than historical measures indicate. Other risk management methods depend on the evaluation of information regarding markets, customers, catastrophe occurrence or other matters that is publicly available or otherwise accessible to us. This information may not always be accurate, complete, up-to-date or properly evaluated. Management of operational, legal and regulatory risks requires, among other things, policies and procedures to record and verify large numbers of transactions and events. These policies and procedures may not be fully effective.

We employ various strategies, including hedging and reinsurance, with the objective of mitigating risks inherent in our business and operations. These risks include current or future changes in the fair value of our assets and liabilities, current or future changes in cash flows, the effect of interest rates, equity markets and credit spread changes, the occurrence of credit defaults, currency fluctuations and changes in mortality and longevity. We seek to control these risks by, among other things, entering into reinsurance contracts and derivative instruments, such as swaps, options, futures and forward contracts. See "Reinsurance subjects us to the credit risk of reinsurers and may not be available, affordable or adequate to protect us against losses" for a description of risks associated with our use of reinsurance. Developing an effective strategy for dealing with these risks is complex, and no strategy can completely insulate us from such risks. Our hedging strategies also rely on assumptions and projections regarding our assets, liabilities, general market factors and the creditworthiness of our counterparties that may prove to be incorrect or prove to be inadequate. Accordingly, our hedging activities may not have the desired beneficial impact on our results of operations or financial condition. Hedging strategies involve transaction costs and other costs, and if we terminate a hedging arrangement, we may also be required to pay additional costs, such as transaction fees or breakage costs. We may incur losses on transactions after taking into account our hedging strategies. In particular, our hedging strategies focus on the protection of regulatory and rating agency capital, rather than U.S. GAAP earnings. As U.S. GAAP accounting differs from the methods used to determine regulatory reserves and rating agency capital requirements, our hedge program tends to create earnings volatility in our U.S. GAAP financial statements. Further, the nature, timing, design or execution of our hedging transactions could actually increase our risks and losses. Our hedging strategies and the derivatives that we use, or may use in the future, may not adequately mitigate or offset the hedged risk and our hedging transactions may result in losses.

Past or future misconduct by our employees, agents, intermediaries, representatives of our broker-dealer affiliates or employees of our vendors could result in violations of law by us, regulatory sanctions and/or serious reputational or financial harm and the precautions we take to prevent and detect this activity may not be effective in all cases. Although we employ controls and procedures designed to monitor associates' business decisions and to prevent us from taking excessive or inappropriate risks, associates may take such risks regardless of such controls and procedures. Our compensation policies and practices are reviewed by us as part of our overall risk management program, but it is possible that such compensation policies and practices could inadvertently incentivize excessive or inappropriate risk taking. If our associates take excessive or inappropriate risks, those risks could harm our reputation and have a material adverse effect on our results of operations and financial condition.

The inability of counterparties to meet their financial obligations could have an adverse effect on our results of operations.

Third parties that owe us money, securities or other assets may not pay or perform under their obligations. These parties include the issuers or guarantors of securities we hold, customers, reinsurers, trading counterparties, securities lending and repurchase counterparties, counterparties under swaps, credit default and other derivative contracts, clearing agents, exchanges, clearing houses and other financial intermediaries. Defaults by one or more of these parties on their obligations to us due to bankruptcy, lack of liquidity, downturns in the economy or real estate values, operational failure or other factors, or even rumors about potential defaults by one or more of these parties, could have a material adverse effect on our results of operations, financial condition and liquidity.

We routinely execute a high volume of transactions such as unsecured debt instruments, derivative transactions and equity investments with counterparties and customers in the financial services industry, including broker-dealers, commercial and investment banks, mutual and hedge funds, institutional clients, futures clearing merchants, swap dealers, insurance companies and other institutions, resulting in large periodic settlement amounts which may result in our having significant credit exposure to one or more of such counterparties or customers. Many of these transactions comprise derivative instruments with a number of counterparties in order to hedge various risks, including equity and interest rate market risk features within many of our insurance and annuity products. Our obligations under our products are not changed by our hedging activities and we are liable for our obligations even if our derivative counterparties do not pay us. As a result, we face concentration risk with respect to liabilities

or amounts we expect to collect from specific counterparties and customers. A default by, or even concerns about the creditworthiness of, one or more of these counterparties or customers could have an adverse effect on our results of operations or liquidity. There is no assurance that losses on, or impairments to the carrying value of, these assets due to counterparty credit risk would not materially and adversely affect our business, results of operations or financial condition.

We are also subject to the risk that our rights against third parties may not be enforceable in all circumstances. The deterioration or perceived deterioration in the credit quality of third parties whose securities or obligations we hold could result in losses and/or adversely affect our ability to rehypothecate or otherwise use those securities or obligations for liquidity purposes. While in many cases we are permitted to require additional collateral from counterparties that experience financial difficulty, disputes may arise as to the amount of collateral we are entitled to receive and the value of pledged assets. Our credit risk may also be exacerbated when the collateral we hold cannot be realized or is liquidated at prices not sufficient to recover the full amount of the loan or derivative exposure that is due to us, which is most likely to occur during periods of illiquidity and depressed asset valuations, such as those experienced during the financial crisis of 2008-09. The termination of contracts and the foreclosure on collateral may subject us to claims for the improper exercise of rights under the contracts. Bankruptcies, downgrades and disputes with counterparties as to the valuation of collateral tend to increase in times of market stress and illiquidity.

Requirements to post collateral or make payments related to changes in market value of specified assets may adversely affect liquidity.

The amount of collateral we may be required to post under short-term financing agreements, FHLB funding agreements and derivative transactions may increase under certain circumstances. Pursuant to the terms of some transactions, we could be required to make payment to our counterparties related to any change in the market value of the specified collateral assets. Such requirements could have an adverse effect on liquidity. Furthermore, with respect to any such payments, we may have unsecured risk to the counterparty as these amounts may not be required to be segregated from the counterparty's other funds, may not be held in a third-party custodial account and may not be required to be paid to us by the counterparty until the termination of the transaction. Additionally, the implementation of the Dodd-Frank Act and the resultant changes in collateral requirements may increase the need for liquidity and eligible collateral assets in excess of what is already being held.

Our investment portfolio is subject to several risks that may diminish the value of our invested assets and the investment returns credited to customers, which could reduce our sales, revenues, AUM, results of operations and financial condition.

Fixed income securities represent a significant portion of our investment portfolio. We are subject to the risk that the issuers, or guarantors, of fixed income securities we own may default on principal and interest payments they owe us. We are also subject to the risk that the underlying collateral within asset-backed securities, including mortgage-backed securities, may default on principal and interest payments causing an adverse change in cash flows. The occurrence of a major economic downturn, acts of corporate malfeasance, widening mortgage or credit spreads, or other events that adversely affect the issuers, guarantors or underlying collateral of these securities could cause the estimated fair value of our fixed income securities portfolio and our earnings to decline and the default rate of the fixed income securities in our investment portfolio to increase. A ratings downgrade affecting issuers or guarantors of securities in our investment portfolio, or similar trends that could worsen the credit quality of such issuers, or guarantors could also have a similar effect. Similarly, a ratings downgrade affecting a security we hold could indicate the credit quality of that security has deteriorated and could increase the capital we must hold to support that security to maintain our RBC ratio. See -"A decrease in our RBC ratio (as a result of a reduction in statutory surplus and/or increase in RBC requirements) could result in increased scrutiny by insurance regulators and rating agencies and have a material adverse effect on our business, results of operations and financial condition." We are also subject to the risk that cash flows resulting from the payments on pools of mortgages that serve as collateral underlying the mortgage-backed securities we own may differ from our expectations in timing or size. Cash flow variability arising from an unexpected acceleration in mortgage prepayment behavior can be significant, and could cause a decline in the estimated fair value of certain "interest-only" securities within our mortgage-backed securities portfolio. Any event reducing the estimated fair value of these securities, other than on a temporary basis, could have a material adverse effect on our business, results of operations and financial condition.

From time to time we invest our capital to seed a particular investment strategy or investment portfolio. We may also co-invest in funds or take an equity ownership interest in certain structured finance/investment vehicles that are managed by our affiliates. In some cases, these interests may be leveraged by third-party debt financing. Any decrease in the value of such investments could negatively affect our revenues and income or subject us to losses.

Some of our investments are relatively illiquid and in some cases are in asset classes that have been experiencing significant market valuation fluctuations.

We hold certain assets that may lack liquidity, such as privately placed fixed income securities, commercial mortgage loans, policy loans and limited partnership interests. These asset classes represented 33.1% of the carrying value of our total cash and invested assets as of December 31, 2016. If we require significant amounts of cash on short notice in excess of normal cash requirements or are required to post or return collateral in connection with our investment portfolio, derivatives transactions or securities lending activities, we may have difficulty selling these investments in a timely manner, be forced to sell them for less than we otherwise would have been able to realize, or both.

The reported values of our relatively illiquid types of investments do not necessarily reflect the current market price for the asset. If we were forced to sell certain of our assets in the current market, there can be no assurance that we would be able to sell them for the prices at which we have recorded them and we might be forced to sell them at significantly lower prices.

We invest a portion of our invested assets in investment funds, many of which make private equity investments. The amount and timing of income from such investment funds tends to be uneven as a result of the performance of the underlying investments, including private equity investments. The timing of distributions from the funds, which depends on particular events relating to the underlying investments, as well as the funds' schedules for making distributions and their needs for cash, can be difficult to predict. As a result, the amount of income that we record from these investments can vary substantially from quarter to quarter. Recent equity and credit market volatility may reduce investment income for these types of investments.

Defaults or delinquencies in our commercial mortgage loan portfolio may adversely affect our profitability and financial condition.

The commercial mortgage loans we hold face both default and delinquency risk. We establish loan specific estimated impairments at the balance sheet date. These impairments are based on the excess carrying value of the loan over the present value of expected future cash flows discounted at the loan's original effective interest rate, the estimated fair value of the loan's collateral if the loan is in the process of foreclosure or otherwise collateral dependent, or the loan's observable market price. We also establish valuation allowances for loan losses when, based on past experience, it is probable that a credit event has occurred and the amount of the loss can be reasonably estimated. These valuation allowances are based on loan risk characteristics, historical default rates and loss severities, real estate market fundamentals and outlook as well as other relevant factors. The performance of our commercial mortgage loan investments may fluctuate in the future. In addition, legislative proposals that would allow or require modifications to the terms of commercial mortgage loans could be enacted. We cannot predict whether these proposals will be adopted, or what impact, if any, such laws, if enacted, could have on our business or investments. An increase in the delinquency and default rate of our commercial mortgage loan portfolio could adversely impact our results of operations and financial condition.

Further, any geographic or sector concentration of our commercial mortgage loans may have adverse effects on our investment portfolios and consequently on our results of operations or financial condition. While we generally seek to mitigate the risk of sector concentration by having a broadly diversified portfolio, events or developments that have a negative effect on any particular geographic region or sector may have a greater adverse effect on the investment portfolios to the extent that the portfolios are concentrated, which could affect our results of operations and financial condition.

In addition, liability under environmental protection laws resulting from our commercial mortgage loan portfolio and real estate investments could affect our results of operations or financial condition. Under the laws of several states, contamination of a property may give rise to a lien on the property to secure recovery of the costs of cleanup. In some states, such a lien has priority over the lien of an existing mortgage against the property, which would impair our ability to foreclose on that property should the related loan be in default. In addition, under the laws of some states and under the federal Comprehensive Environmental Response, Compensation and Liability Act of 1980, we may be liable for costs of addressing releases or threatened releases of hazardous substances that require remedy at a property securing a mortgage loan held by us, regardless of whether or not the environmental damage or threat was caused by the obligor, which could harm our results of operations and financial condition. We also may face this liability after foreclosing on a property securing a mortgage loan held by us.

Our operations are complex and a failure to properly perform services could have an adverse effect on our revenues and income.

Our operations include annuity contract administration, portfolio management, shareholder services, contract and sales and servicing, underwriting, distribution, and other services. In order to be competitive, we must properly perform our administrative and related responsibilities, including recordkeeping and accounting, regulatory compliance, security pricing, corporate actions,

compliance with investment restrictions, daily net asset value computations, account reconciliations and required distributions. If we fail to properly perform and monitor our operations, our business could suffer and our revenues and income could be adversely affected.

Our products and services are complex and are frequently sold through intermediaries, and a failure to properly perform services or the misrepresentation of our products or services could have an adverse effect on our revenues, income and financial condition.

Many of our products and services are complex and are frequently sold through intermediaries. In particular, we are reliant on intermediaries to describe and explain our products to potential customers. The intentional or unintentional misrepresentation of our products and services in advertising materials or other external communications, or inappropriate activities by our personnel or an intermediary, could adversely affect our reputation and business prospects, as well as lead to potential regulatory actions or litigation.

The valuation of many of our financial instruments includes methodologies, estimations and assumptions that are subject to differing interpretations and could result in changes to investment valuations that may materially and adversely affect our results of operations and financial condition.

The following financial instruments are carried at fair value in our financial statements: fixed income securities, equity securities, derivatives, embedded derivatives and separate account assets. We have categorized these instruments into a three-level hierarchy, based on the priority of the inputs to the respective valuation technique. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3), while quoted prices in markets that are not active or valuation techniques requiring inputs that are observable for substantially the full term of the asset or liability are Level 2.

Factors considered in estimating fair values of securities, and derivatives and embedded derivatives related to our securities include coupon rate, maturity, principal paydown including prepayments, estimated duration, call provisions, sinking fund requirements, credit rating, industry sector of the issuer and quoted market prices of comparable securities. Factors considered in estimating the fair values of embedded derivatives and derivatives related to product guarantees and index-crediting features (collectively, "guaranteed benefit derivatives") include risk-free interest rates, long-term equity implied volatility, interest rate implied volatility, correlations among mutual funds associated with variable annuity contracts, correlations between interest rates and equity funds and actuarial assumptions such as mortality rates, lapse rates and benefit utilization, as well as the amount and timing of policyholder deposits and partial withdrawals. The impact of our risk of nonperformance is also reflected in the estimated fair value of guaranteed benefit derivatives. In many situations, inputs used to measure the fair value of an asset or liability may fall into different levels of the fair value hierarchy. In these situations, we will determine the level in which the fair value falls based upon the lowest level input that is significant to the determination of the fair value.

The determinations of fair values are made at a specific point in time, based on available market information and judgments about financial instruments, including estimates of the timing and amounts of expected future cash flows and the credit standing of the issuer or counterparty. The use of different methodologies and assumptions may have a material effect on the estimated fair value amounts.

During periods of market disruption, including periods of rapidly changing credit spreads or illiquidity, it has been and will likely continue to be difficult to value certain of our securities, such as certain mortgage-backed securities, if trading becomes less frequent and/or market data becomes less observable. There may be certain asset classes that were in active markets with significant observable data that could become illiquid in a difficult financial environment. In such cases, more securities may fall to Level 3 and thus require more subjectivity and management judgment in determining fair value. As such, valuations may include inputs and assumptions that are less observable or require greater estimation, thereby resulting in values that may differ materially from the value at which the investments may be ultimately sold. Further, rapidly changing and unprecedented credit and equity market conditions could materially impact the valuation of securities as reported within the financial statements, and the period-to-period changes in value could vary significantly. Decreases in value could have a material adverse effect on our results of operations and financial condition.

The determination of the amount of allowances and impairments taken on our investments is subjective and could materially and adversely impact our results of operations or financial condition. Gross unrealized losses may be realized or result in future impairments, resulting in a reduction in our net income.

We evaluate investment securities held by us for impairment on a quarterly basis. This review is subjective and requires a high degree of judgment. For fixed income securities held, an impairment loss is recognized if the fair value of the debt security is less than the carrying value and we no longer have the intent to hold the debt security; if it is more likely than not that we will be required to sell the debt security before recovery of the amortized cost basis; or if a credit loss has occurred.

When we do not intend to sell a security in an unrealized loss position, potential credit related other-than-temporary impairments ("OTTI") are considered using a variety of factors, including the length of time and extent to which the fair value has been less than cost, adverse conditions specifically related to the industry, geographic area in which the issuer conducts business, financial condition of the issuer or underlying collateral of a security, payment structure of the security, changes in credit rating of the security by the rating agencies, volatility of the fair value changes and other events that adversely affect the issuer. In addition, we take into account relevant broad market and economic data in making impairment decisions.

As part of the impairment review process, we utilize a variety of assumptions and estimates to make a judgment on how fixed income securities will perform in the future. It is possible that securities in our fixed income portfolio will perform worse than our expectations. There is an ongoing risk that further declines in fair value may occur and additional OTTI may be recorded in future periods, which could materially and adversely affect our results of operations and financial condition. Furthermore, historical trends may not be indicative of future impairments or allowances.

Fixed income and equity securities classified as available-for-sale are reported at their estimated fair value. Unrealized gains or losses on available-for-sale securities are recognized as a component of other comprehensive income (loss) and are therefore excluded from net income (loss). The accumulated change in estimated fair value of these available-for-sale securities is recognized in net income (loss) when the gain or loss is realized upon the sale of the security or in the event that the decline in estimated fair value is determined to be other-than-temporary and an impairment charge to earnings is taken. Such realized losses or impairments may have a material adverse effect on our net income (loss) in a particular quarterly or annual period.

Our participation in a securities lending program and a repurchase program subjects us to potential liquidity and other risks.

We engage in a securities lending program whereby certain securities, are loaned to other institutions for short periods of time. Initial collateral, primarily cash, is required at 102% of the market value of the loaned securities. The lending agent retains the cash collateral and invests it in liquid assets on our behalf. The market value of the loaned securities is monitored on a daily basis with additional collateral obtained or refunded as the market value of the loan security fluctuates.

We also participate in a repurchase agreement program for our general account whereby we sell fixed income securities to a third-party, primarily major brokerage firms or commercial banks, with a concurrent agreement to repurchase those same securities at a determined future date. During the term of the repurchase agreements, cash or other types of permitted collateral provided to us is sufficient to allow us to fund substantially all of the cost of purchasing replacement assets in the event of counterparty default (i.e., the sold securities are not returned to us on the scheduled repurchase date). Cash proceeds received by us under the repurchase program are typically invested in fixed income securities but may in certain circumstances be available to us for liquidity or other purposes prior to the scheduled repurchase date. The repurchase of securities or our inability to enter into new repurchase agreements would reduce the amount of such cash collateral available to us. Market conditions on or after the repurchase date may limit our ability to enter into new agreements at a time when we need access to additional cash collateral for investment or liquidity purposes.

For both securities lending and repurchase transactions, in some cases, the maturity of the securities held as invested collateral (i.e., securities that we have purchased with cash collateral received) may exceed the term of the related securities on loan and the estimated fair value may fall below the amount of cash received as collateral and invested. If we are required to return significant amounts of cash collateral on short notice and we are forced to sell securities to meet the return obligation, we may have difficulty selling such collateral that is invested in securities in a timely manner, be forced to sell securities in a volatile or illiquid market for less than we otherwise would have been able to realize under normal market conditions, or both. In addition, under adverse capital market and economic conditions, liquidity may broadly deteriorate, which would further restrict our ability to sell securities. If we decrease the amount of our securities lending and repurchase activities over time, the amount of net investment income generated by these activities will also likely decline. See "Item 7. Management's Narrative Analysis of the Results of Operations and Financial Condition-Liquidity and Capital Resources-Securities Lending."

Differences between actual claims experience and reserving assumptions may adversely affect our results of operations or financial condition.

We establish and hold reserves to pay future policy benefits and claims. Our reserves do not represent an exact calculation of liability, but rather are actuarial or statistical estimates based on data and models that include many assumptions and projections, which are inherently uncertain and involve the exercise of significant judgment, including assumptions as to the levels and/or timing of receipt or payment of premiums, benefits, claims, expenses, interest credits, investment results (including equity market returns), retirement, mortality, morbidity and persistency. We periodically review the adequacy of reserves and the underlying assumptions. We cannot, however, determine with precision the amounts that we will pay for, or the timing of payment of, actual benefits, claims and expenses or whether the assets supporting our policy liabilities, together with future premiums, will grow to the level assumed prior to payment of benefits or claims. If actual experience differs significantly from assumptions or estimates, reserves may not be adequate. If we conclude that our reserves, together with future premiums, are insufficient to cover future policy benefits and claims, we would be required to increase our reserves and incur income statement charges for the period in which we make the determination, which could materially and adversely affect our results of operations and financial condition.

We may face significant losses if mortality rates, morbidity rates, persistency rates or other underwriting assumptions differ significantly from our pricing expectations.

We set prices for many of our annuity products based upon expected claims and payment patterns, using assumptions for mortality rates or likelihood of death and morbidity rates, or likelihood of sickness, of our policyholders. In addition to the potential effect of natural or man-made disasters, significant changes in mortality or morbidity could emerge gradually over time due to changes in the natural environment, the health habits of the insured population, technologies and treatments for disease or disability, the economic environment, or other factors. The long-term profitability of our annuity products depends upon how our actual mortality rates, and to a lesser extent actual morbidity rates, compare to our pricing assumptions. In addition, prolonged or severe adverse mortality or morbidity experience could result in increased reinsurance costs, and ultimately, reinsurers might not offer coverage at all. If we are unable to maintain our current level of reinsurance or purchase new reinsurance protection in amounts that we consider sufficient, we would have to accept an increase in our net risk exposures, revise our pricing to reflect higher reinsurance premiums, or otherwise modify our product offering.

Pricing of our annuity products is also based in part upon expected persistency of these products, which is the probability that a policy will remain in force from one period to the next. Persistency of our annuity products may be significantly and adversely impacted by the increasing value of guaranteed minimum benefits contained in many of our variable annuity products due to poor equity market performance or extended periods of low interest rates as well as other factors. The minimum interest rate guarantees in our fixed annuities may also be more valuable in extended periods of low interest rates. Persistency could be adversely affected generally by developments adversely affecting customer perception of us. Results may also vary based on differences between actual and expected premium deposits and withdrawals for these products. Many of our deferred annuity products also contain optional benefits that may be exercised at certain points within a contract. We set prices for such products using assumptions for the rate of election of deferred annuity living benefits and other optional benefits offered to our contract owners. The profitability of our deferred annuity products may be less than expected, depending upon how actual contract owner decisions to elect or delay the utilization of such benefits compare to our pricing assumptions. The potential development of third-party investor strategies in the annuities business could also adversely affect the profitability of existing business and our pricing assumptions for new business. Actual persistency that is lower than our persistency assumptions could have an adverse effect on profitability, especially in the early years of a policy, primarily because we would be required to accelerate the amortization of expenses we defer in connection with the acquisition of the policy. Actual persistency that is higher than our persistency assumptions could have an adverse effect on profitability in the later years of a block of business because the anticipated claims experience is higher in these later years. If actual persistency is significantly different from that assumed in our current reserving assumptions, our reserves for future policy benefits may prove to be inadequate. Although some of our products permit us to increase premiums or adjust other charges and credits during the life of the policy, the adjustments permitted under the terms of the policies may not be sufficient to maintain profitability. Many of our products, however, do not permit us to increase premiums or adjust charges and credits during the life of the policy or during the initial guarantee term of the policy. Even if permitted under the policy, we may not be able or willing to raise premiums or adjust other charges for regulatory or competitive reasons.

Pricing of our products is also based on long-term assumptions regarding interest rates, investment returns and operating costs. Management establishes target returns for each product based upon these factors, the other underwriting assumptions noted above and the average amount of regulatory and rating agency capital that we must hold to support in-force contracts. We monitor and manage pricing and sales to achieve target returns. Profitability from new business emerges over a period of years, depending on the nature and life of the product, and is subject to variability as actual results may differ from pricing assumptions. Our profitability depends on multiple factors, including the comparison of actual mortality, morbidity and persistency rates and policyholder behavior

to our assumptions; the adequacy of investment margins; our management of market and credit risks associated with investments; our ability to maintain premiums and contract charges at a level adequate to cover mortality, benefits and contract administration expenses; the adequacy of contract charges and availability of revenue from providers of investment options offered in variable contracts to cover the cost of product features and other expenses; and management of operating costs and expenses.

We may be required to accelerate the amortization of DAC, deferred sales inducements ("DSI") and/or VOBA, any of which could adversely affect our results of operations or financial condition.

DAC represents policy acquisition costs that have been capitalized. DSI represents benefits paid to contract owners for a specified period that are incremental to the amounts we credit on similar contracts without sales inducements and are higher than the contract's expected ongoing crediting rates for periods after the inducement. VOBA represents outstanding value of in-force business acquired. Capitalized costs associated with DAC, DSI and VOBA are amortized in proportion to actual and estimated gross profits or gross premiums depending on the type of contract. On an ongoing basis, we test the DAC, DSI and VOBA recorded on our balance sheets to determine if these amounts are recoverable under current assumptions. In addition, we regularly review the estimates and assumptions underlying DAC, DSI and VOBA. The projection of estimated gross profits or gross premiums requires the use of certain assumptions, principally related to separate account fund returns in excess of amounts credited to policyholders, policyholder behavior such as surrender, lapse and annuitization rates, interest margin, expense margin, mortality, future impairments and hedging costs. Estimating future gross profits or gross premiums is a complex process requiring considerable judgment and the forecasting of events well into the future. If these assumptions prove to be inaccurate, if an estimation technique used to estimate future gross profits or gross premiums is changed, or if significant or sustained equity market declines occur and/or persist, we could be required to accelerate the amortization of DAC, DSI and VOBA, which would result in a charge to earnings. Such adjustments could have a material adverse effect on our results of operations and financial condition.

Reinsurance subjects us to the credit risk of reinsurers and may not be available, affordable or adequate to protect us against losses.

We cede life insurance policies and annuity contracts or certain risks related to life insurance policies and annuity contracts to other insurance companies using various forms of reinsurance including coinsurance, modified coinsurance, funds withheld, monthly renewable term and yearly renewable term. However, we remain liable to the underlying policyholders, even if the reinsurer defaults on its obligations with respect to the ceded business. If a reinsurer fails to meet its obligations under the reinsurance contract, we will be forced to bear the entire liability for claims on the reinsured policies. In addition, a reinsurer insolvency may cause us to lose our reserve credits on the ceded business, in which case we would be required to establish additional statutory reserves.

In addition, if a reinsurer does not have accredited reinsurer status or if a currently accredited reinsurer loses that status, in any state where we are licensed to do business, we are not entitled to take credit for reinsurance in that state if the reinsurer does not post sufficient qualifying collateral (either qualifying assets in a qualifying trust or qualifying LOCs). In this event, we would be required to establish additional statutory reserves. Similarly, the credit for reinsurance taken by us under reinsurance agreements with affiliated and unaffiliated non-accredited reinsurers is, under certain conditions, dependent upon the non-accredited reinsurer's ability to obtain and provide sufficient qualifying assets in a qualifying trust or qualifying LOCs issued by qualifying lending banks. In order to control expenses associated with LOCs, some of our affiliated reinsurers have established and will continue to pursue alternative sources for qualifying reinsurance collateral. If these steps are unsuccessful, or if unaffiliated non-accredited reinsurers that have reinsured business with us are unsuccessful in obtaining sources of qualifying reinsurance collateral, we might not be able to obtain full statutory reserve credit. Loss of reserve credit would require us to establish additional statutory reserves and would result in a decrease in the level of our capital, which could have a material adverse effect on our profitability, results of operations and financial condition.

Our reinsurance recoverable balances are periodically assessed for uncollectability and there were no significant allowances for uncollectible reinsurance as of December 31, 2016 and December 31, 2015. The collectability of reinsurance recoverables is subject to uncertainty arising from a number of factors, including whether the insured losses meet the qualifying conditions of the reinsurance contract, whether reinsurers or their affiliates have the financial capacity and willingness to make payments under the terms of the reinsurance contract, and the degree to which our reinsurance balances are secured by sufficient qualifying assets in qualifying trusts or qualifying LOCs issued by qualifying lender banks. Although a substantial portion of our reinsurance exposure is secured by assets held in trusts or LOCs, the inability to collect a material recovery from a reinsurer could have a material adverse effect on our profitability, results of operations and financial condition.

The premium rates and other fees that we charge are based, in part, on the assumption that reinsurance will be available at a certain cost. Some of our reinsurance contracts contain provisions that limit the reinsurer's ability to increase rates on in-force business;

however, some do not. If a reinsurer raises the rates that it charges on a block of in-force business, in some instances, we will not be able to pass the increased costs onto our customers and our profitability will be negatively impacted. Additionally, such a rate increase could result in our recapturing of the business, which may result in a need to maintain additional reserves, reduce reinsurance receivables and expose us to greater risks. While in prior years, we faced rate increase actions on in-force business, our management of those actions has not had a material effect on our results of operations or financial condition. However, there can be no assurance that the outcome of future rate increase actions would similarly result in no material effect. In addition, if reinsurers raise the rates that they charge on new business, we may be forced to raise our premiums, which could have a negative impact on our competitive position.

We reinsure most of our living benefit guarantee riders to RRII, an affiliated reinsurer, to mitigate the risk produced by such benefits. The reinsurance agreement covers all of the guaranteed minimum income benefits ("GMIB"), as well as the GMWBs with lifetime guarantees. The GMABs and the GMWBs without lifetime guarantees are not covered by this reinsurance.

A decrease in our RBC ratio (as a result of a reduction in statutory surplus and/or increase in RBC requirements) could result in increased scrutiny by insurance regulators and rating agencies and have a material adverse effect on our business, results of operations and financial condition.

The NAIC has established regulations that provide minimum capitalization requirements based on RBC formulas for insurance companies. The RBC formula for life insurance companies establishes capital requirements relating to asset, insurance, interest rate and business risks, including equity, interest rate and expense recovery risks associated with variable annuities and group annuities that contain guaranteed minimum death and living benefits. We are subject to RBC standards and/or other minimum statutory capital and surplus requirements imposed under the laws of Iowa, our state of domicile. (For additional discussion of possible updates to how the NAIC calculates RBC ratios, see “Item 1. Business-Regulation-Insurance Regulation-Financial Regulation-Risk -Based Capital.”)

In any particular year, statutory surplus amounts and RBC ratios may increase or decrease depending on a variety of factors, including the amount of statutory income or losses (which are sensitive to equity market and credit market conditions), the amount of additional capital we must hold to support business growth, changes in equity market levels, the value and credit ratings of certain fixed-income and equity securities in our investment portfolio, the value of certain derivative instruments that do not receive hedge accounting and changes in interest rates, as well as changes to the RBC formulas and the interpretation of the NAIC's instructions with respect to RBC calculation methodologies. Many of these factors are outside of our control. Our financial strength and credit ratings are significantly influenced by statutory surplus amounts and RBC ratios. In addition, rating agencies may implement changes to their own internal models, which differ from the RBC capital model that have the effect of increasing or decreasing the amount of statutory capital we should hold relative to the rating agencies' expectations. In extreme scenarios of equity market declines, sustained periods of low interest rates, rapidly rising interest rates or credit spread widening, the amount of additional statutory reserves that we are required to hold for certain types of funding agreements and variable annuity guarantees may increase at a greater than linear rate. This increase in reserves would decrease the statutory surplus available for use in calculating the subsidiary's RBC ratios. To the extent that our RBC ratios are deemed to be insufficient, we may seek to take actions either to increase our capitalization or to reduce our capitalization requirements. If we were unable to accomplish such actions, the rating agencies may view this as a reason for a ratings downgrade.

Our failure to meet RBC requirements or minimum capital and surplus requirements could subject us to further examination or corrective action imposed by insurance regulators, including limitations on our ability to write additional business, supervision by regulators or seizure or liquidation. Any corrective action imposed could have a material adverse effect on our business, results of operations and financial condition. A decline in RBC ratios limits our ability to make dividends or distributions to our Parent, could result in a loss of customers or new business, and could be a factor in causing ratings agencies to downgrade our financial strength ratings, each of which could have a material adverse effect on our business, results of operations and financial condition.

A significant portion of our institutional funding originates from a Federal Home Loan Bank, which subjects us to liquidity risks associated with sourcing a large concentration of our funding from one counterparty.

A significant portion of our institutional funding originates from the Federal Home Loan Bank of Des Moines ("FHLB"). We have issued non-putable funding agreements in exchange for eligible collateral in the form of cash, mortgage-backed securities and U.S. Treasury securities. Should the FHLB choose to change its definition of eligible collateral, or if the market value of the pledged collateral decreases in value due to changes in interest rates or credit ratings, we may be required to post additional amounts of collateral in the form of cash or other eligible collateral. Additionally, we may be required to find other sources to replace this funding if we lose access to FHLB funding. This could occur if our creditworthiness falls below either of the FHLB's requirements

or if legislative or other political actions cause changes to the FHLBs' mandate or to the eligibility of life insurance companies to be members of the FHLB system.

Any failure to protect the confidentiality of customer information could adversely affect our reputation and have a material adverse effect on our business, financial condition and results of operation.

Our businesses and relationships with customers are dependent upon our ability to maintain the confidentiality of our and our customers' trade secrets, personal information, and other confidential information (including customer transactional data and personal information about our customers, the employees and customers of our customers, and our own employees). We are also subject to numerous federal and state laws regarding the privacy and security of personal information, which laws vary significantly from jurisdiction to jurisdiction. Many of our employees and contractors and the representatives of our broker-dealer affiliates have access to and routinely process personal information in computerized, paper and other forms. We rely on various internal policies, procedures and controls to protect the confidentiality of personal information that is accessible to, or in the possession of, us, our employees, contractors and representatives. It is possible that an employee, contractor or representative could, intentionally or unintentionally, disclose or misappropriate personal information or other confidential information. If we fail to maintain adequate internal controls, including any failure to implement newly-required additional controls, or if our employees, contractors or representatives fail to comply with our policies and procedures, misappropriation or intentional or unintentional inappropriate disclosure or misuse of personal information or confidential customer information could occur. Such internal control inadequacies or non-compliance could materially damage our reputation, result in regulatory action or lead to civil or criminal penalties, which, in turn, could have a material adverse effect on our business, reputation, results of operations and financial condition. For additional risks related to our potential failure to protect confidential information, see "-Interruption or other operational failures in telecommunication, information technology, and other operational systems, including as a result of human error, could harm our business," and "-A failure to maintain the security, integrity, confidentiality or privacy of our telecommunication, information technology or other operational systems, or the sensitive data residing on such systems, could harm our business."

Interruption or other operational failures in telecommunication, information technology and other operational systems, including as a result of human error, could harm our business.

We are highly dependent on automated and information technology systems to record and process both our internal transactions and transactions involving our customers, as well as to calculate reserves, value invested assets and complete certain other components of our U.S. GAAP and statutory financial statements. We could experience a failure of one of these systems, our employees or agents could fail to monitor and implement enhancements or other modifications to a system in a timely and effective manner, or our employees or agents could fail to complete all necessary data reconciliation or other conversion controls when implementing a new software system or implementing modifications to an existing system. Despite the implementation of security and back-up measures, our information technology systems may remain vulnerable to disruptions. We may also be subject to disruptions of any of these systems arising from events that are wholly or partially beyond our control (for example, natural disasters, acts of terrorism, epidemics, computer viruses and electrical/telecommunications outages). All of these risks are also applicable where we rely on outside vendors to provide services to us and our customers and third party service providers, including those to whom we outsource certain of our functions. The failure of any one of these systems for any reason, or errors made by our employees or agents, could in each case cause significant interruptions to our operations, which could harm our reputation, adversely affect our internal control over financial reporting, or have a material adverse effect on our business, results of operations and financial condition.

Central banks in Europe and Japan have in recent years begun to pursue negative interest rate policies, and the FOMC has not ruled out the possibility that the Federal Reserve would adopt a negative interest rate policy for the United States, at some point in the future, if circumstances so warranted. Because negative interest rates are largely unprecedented, there is uncertainty as to whether the technology used by financial institutions, including us, could operate correctly in such a scenario. Should negative interest rates emerge, our hardware or software, or the hardware or software used by our contractual counterparties and financial services providers, may not function as expected or at all. In such a case, our financial results and our operations could be adversely affected.

A failure to maintain the security, integrity, confidentiality or privacy of our telecommunication, information technology or other operational systems, or the sensitive data residing on such systems, could harm our business.

We are highly dependent on automated telecommunications, information technology and other operational systems to record and process our internal transactions and transactions involving our customers. Despite the implementation of security and back-up measures, our information technology systems may be vulnerable to physical or electronic intrusions, viruses or other attacks,

programming errors, and similar disruptions. Businesses in the United States and in other countries have increasingly become the targets of "cyberattacks", "hacking" or similar illegal or unauthorized intrusions into computer systems and networks. Such events are often highly publicized, result in the theft of significant amounts of information, and cause extensive damage to the reputation of the targeted business, in addition to leading to significant expenses associated with investigation, remediation and customer protection measures. Like others in our industry, we are subject to cyber incidents in the ordinary course of our business. Although we seek to limit our vulnerability to such events through technological and other means, it is not possible to anticipate or prevent all potential forms of cyberattack or to guarantee our ability to fully defend against all such attacks. In addition, due to the sensitive nature of much of the financial and other personal information we maintain, we may be at particular risk for targeting.

We retain confidential information in our information technology systems, and we rely on industry standard commercial technologies to maintain the security of those systems. Anyone who is able to circumvent our security measures and penetrate our information technology systems could access, view, misappropriate, alter, or delete information in the systems, including personal information and proprietary business information. Information security risks also exist with respect to the use of portable electronic devices, such as laptops, which are particularly vulnerable to loss and theft. The laws of most states require that individuals be notified if a security breach compromises the security or confidentiality of their personal information. Any attack or other breach of the security of our information technology systems that compromises personal information or that otherwise results in unauthorized disclosure or use of personal information could damage our reputation in the marketplace, deter purchases of our products, subject us to heightened regulatory scrutiny, sanctions, significant civil and criminal liability or other adverse legal consequences and require us to incur significant technical, legal and other expenses.

Our third party service providers, including third parties to whom we outsource certain of our functions are also subject to the risks outlined above, any one of which could result in our incurring substantial costs and other negative consequences, including a material adverse effect on our business, results of operations and financial condition.

Changes in accounting standards could adversely impact our reported results of operations and our reported financial condition.

Our financial statements are subject to the application of U.S. GAAP, which is periodically revised or expanded. Accordingly, from time to time we are required to adopt new or revised accounting standards issued by recognized authoritative bodies, including the Financial Accounting Standards Board ("FASB"). It is possible that future accounting standards we are required to adopt could change the current accounting treatment that we apply to our financial statements and that such changes could have a material adverse effect on our results of operations and financial condition.

FASB is working on several projects, which could result in significant changes in U.S. GAAP, including how we account for our life insurance contracts and financial instruments and how our financial statements are presented. The changes to U.S. GAAP could affect the way we account for and report significant areas of our business, could impose special demands on us in the areas of governance, employee training, internal controls and disclosure and will likely affect how we manage our business.

Under the tax sharing agreement, a change in control could affect availability of cash payments.

Our federal tax sharing agreement with Voya Financial, Inc. provides that Voya Financial, Inc. will pay us for the tax benefits of ordinary and capital losses only in the event that the consolidated tax group actually uses the tax benefit of losses generated. Accordingly, in years we incur losses and the associated tax benefits cannot be used by the consolidated tax group we may establish tax valuation allowances, reduce statutory-based admitted assets and may no longer be entitled to receive net cash payments to/(from) Voya Financial, Inc. During the years ended December 31, 2016 and 2015, we have additional net cash payments to/(receipts) from Voya Financial, Inc. under the tax sharing agreement of $98.7 million and $(93.9) million, respectively.

One such instance where the associated tax benefits may not be used by the consolidated tax group could occur if there is a change in control which would trigger the imposition of certain limitations pursuant to Section 382 and Section 383 of the U.S. Internal Revenue Code of 1986, as amended (the "Internal Revenue Code"). These sections operate as anti-abuse rules, the general purpose of which is to prevent trafficking in tax losses and credits, but which can apply without regard to whether a "loss trafficking" transaction occurs or is intended. These rules are triggered when an "ownership change" (generally defined as when the ownership of a company changes by more than 50% (measured by value) on a cumulative basis in any three year period) occurs ("Section 382 event").

During March 2014, ING Group divested a portion of its shareholding in Voya Financial, Inc., our indirect parent company, which caused Voya Financial, Inc. to experience a Section 382 event. Using an estimated Section 382 value of Voya Financial, Inc., our deferred tax asset, tax valuation allowance, admitted deferred tax asset and tax sharing agreement payments did not materially change as a result of the Section 382 event with respect to Voya Financial, Inc.

Although Voya Financial, Inc. entered into an Issue Resolution Agreement in this regard with the IRS in December, 2014, as with such an agreement, the matters addressed may be revisited by the IRS in connection with a tax audit or other examination or inquiry of Voya Financial, Inc.'s tax position. If the IRS were to revisit and successfully challenge the IRC Section 382 calculations of Voya Financial, Inc., this could impact our ability to obtain tax benefits from existing and future losses and deductions could be adversely affected.

We may be required to reduce the carrying value of our deferred income tax asset or establish an additional valuation allowance against the deferred income tax asset if: (i) there are significant changes to federal tax policy or rates, (ii) our business does not generate sufficient taxable income; (iii) there is a significant decline in the fair market value of our investment portfolio; or (iv) our tax planning strategies are modified. Reductions in the carrying value of our deferred income tax asset or increases in the deferred tax valuation allowance could have a material adverse effect on our results of operations and financial condition.

Deferred income tax represents the tax effect of the differences between the book and tax basis of assets and liabilities. Deferred tax assets represent the tax benefit of future deductible temporary differences, operating loss carryforwards and tax credits carryforward. We periodically evaluate and test our ability to realize our deferred tax assets. Deferred tax assets are reduced by a valuation allowance if, based on the weight of evidence, it is more likely than not that some portion, or all, of the deferred tax assets will not be realized. In assessing the more likely than not criteria, we consider future taxable income as well as prudent tax planning strategies. Future facts, circumstances, tax law changes, including a reduction in federal corporate tax rates or the elimination of the dividends received deduction, and FASB developments may result in a reduction in the carrying value of our deferred income tax asset or an increase in the valuation allowance. An increase in the valuation allowance or a reduction in the carrying value of our deferred income tax asset could have a material adverse effect on our results of operations and financial condition.

As of December 31, 2016, we have recognized certain deferred tax assets based on tax planning related to unrealized gains on investment assets. To the extent these unrealized gains decrease, the tax benefit may be reduced by increasing the tax valuation allowance. For example, if interest rates increase, the amount of the unrealized gains will, most likely, decrease, with all other things constant. The decrease in the deferred tax asset may be recorded as a tax expense in tax on continuing operations based on the intra period tax allocation rules described in ASC Topic 740, "Income Taxes."

Our business may be negatively affected by adverse publicity or increased governmental and regulatory actions with respect to us, other well-known companies or the financial services industry in general.

Governmental scrutiny with respect to matters relating to compensation, compliance with regulatory and tax requirements and other business practices in the financial services industry has increased dramatically in the past several years and has resulted in more aggressive and intense regulatory supervision and the application and enforcement of more stringent standards. The financial crisis of 2008-09 and current political and public sentiment regarding financial institutions has resulted in a significant amount of adverse press coverage, as well as adverse statements or charges by regulators and elected officials. Press coverage and other public statements that assert some form of wrongdoing, regardless of the factual basis for the assertions being made, could result in some type of inquiry or investigation by regulators, legislators and/or law enforcement officials or in lawsuits. Responding to these inquiries, investigations and lawsuits, regardless of the ultimate outcome of the proceeding, is time-consuming and expensive and can divert the time and effort of our senior management from its business. Future legislation or regulation or governmental views on compensation may result in us altering compensation practices in ways that could adversely affect our ability to attract and retain talented employees. Adverse publicity, governmental scrutiny, pending or future investigations by regulators or law enforcement agencies and/or legal proceedings involving us or our affiliates could also have a negative impact on our reputation and on the morale and performance of employees, and on business retention and new sales, which could adversely affect our businesses and results of operations.

Litigation may adversely affect our profitability and financial condition.

We are, and may be in the future, subject to legal actions in the ordinary course of our business operations. Some of these legal proceedings may be brought on behalf of a class. Plaintiffs may seek large or indeterminate amounts of damage, including compensatory, liquidated, treble and/or punitive damages. Our reserves for litigation may prove to be inadequate. It is possible that our results of operations or cash flows in a particular quarterly or annual period could be materially affected by an ultimate unfavorable resolution of pending litigation depending, in part, upon the results of operations or cash flows for such period. Given the large or indeterminate amounts sometimes sought, and the inherent unpredictability of litigation, it is also possible that in certain cases an ultimate unfavorable resolution of one or more pending litigation matters could have a material adverse effect on our financial condition.

A loss of, or significant change in, key product distribution relationships could materially affect sales.

We distribute certain products under agreements with affiliated distributors and other members of the financial services industry that are not affiliated with us. We compete with other financial institutions to attract and retain commercial relationships in each of these channels, and our success in competing for sales through these distribution intermediaries depends upon factors such as the amount of sales commissions and fees we pay, the breadth of our product offerings, the strength of our brand, our perceived stability and financial strength ratings, and the marketing and services we provide to, and the strength of the relationships we maintain with, individual distributors. An interruption or significant change in certain key relationships could materially affect our ability to market our products and could have a material adverse effect on our business, operating results and financial condition. Distributors may elect to alter, reduce or terminate their distribution relationships with us, including for such reasons as changes in our distribution strategy, adverse developments in our business, adverse rating agency actions or concerns about market-related risks. Alternatively, we may terminate one or more distribution agreements due to, for example, a loss of confidence in, or a change in control of, one of the distributors, which could reduce sales.

We are also at risk that key distribution partners may merge or change their business models in ways that affect how our products are sold, either in response to changing business priorities or as a result of shifts in regulatory supervision or potential changes in state and federal laws and regulations regarding standards of conduct applicable to distributors when providing investment advice to retail and other customers.

The occurrence of natural or man-made disasters may adversely affect our results of operations and financial condition.

We are exposed to various risks arising from natural disasters, including hurricanes, climate change, floods, earthquakes, tornadoes and pandemic disease, as well as man-made disasters and core infrastructure failures, including acts of terrorism, military actions, power grid and telephone/internet infrastructure failures, which may adversely affect AUM, results of operations and financial condition by causing, among other things:

- losses in our investment portfolio due to significant volatility in global financial markets or the failure of counterparties to perform;
- changes in the rate of mortality, claims, withdrawals, lapses and surrenders of existing policies and contracts, as well as sales of new policies and contracts; and
- disruption of our normal business operations due to catastrophic property damage, loss of life, or disruption of public and private infrastructure, including communications and financial services.

There can be no assurance that our business continuation and crisis management plan or insurance coverages would be effective in mitigating any negative effects on operations or profitability in the event of a disaster, nor can we provide assurance that the business continuation and crisis management plans of the independent distributors and outside vendors on whom we rely for certain services and products would be effective in mitigating any negative effects on the provision of such services and products in the event of a disaster.

Claims resulting from a catastrophic event could also materially harm the financial condition of our reinsurers, which would increase the probability of default on reinsurance recoveries. Our ability to write new business could also be adversely affected.

In addition, the jurisdictions in which we are admitted to transact business require life insurers doing business within the jurisdiction to participate in guaranty associations, which raise funds to pay contractual benefits owed pursuant to insurance policies issued by impaired, insolvent or failed insurers. It is possible that a catastrophic event could require extraordinary assessments on us, which may have a material adverse effect on our business, results of operations and financial condition.

The loss of key personnel could negatively affect our financial results and impair our ability to implement our business strategy.

Our success depends in large part on our ability to attract and retain key people. Intense competition exists for key employees with demonstrated ability, and we may be unable to hire or retain such employees. Our key employees include investment professionals, such as portfolio managers, sales and distribution professionals, actuarial and finance professionals and information technology professionals. While we do not believe that the departure of any particular individual would cause a material adverse effect on our operations, the unexpected loss of several of our senior management, portfolio managers or other key employees could have a material adverse effect on our operations due to the loss of their skills, knowledge of our business, and their years of industry experience as well as the potential difficulty of promptly finding qualified replacement employees. We also rely upon the knowledge and experience of employees involved in functions that require technical expertise in order to provide for sound operational controls

for our overall enterprise, including the accurate and timely preparation of required regulatory filings and U.S. GAAP and statutory financial statements and operation of internal controls. A loss of such employees could adversely impact our ability to execute key operational functions and could adversely affect our operational controls, including internal controls over financial reporting.

If we experience difficulties arising from outsourcing relationships, our ability to conduct business could be compromised, which may have an adverse effect on our business and results of operations.

As we continue to focus on reducing the expense necessary to support our operations, we have increasingly used outsourcing strategies for a significant portion of our technology and business functions. If third-party providers experience disruptions or do not perform as anticipated, or we experience problems with a transition, we may experience operational difficulties, an inability to meet obligations, including, but not limited to, policyholder obligations, increased costs and a loss of business and such events may have a material adverse effect on our business and results of operations. For other risks associated with our outsourcing of certain functions, see “-Interruption or other operational failures in telecommunication, information technology and other operational systems, including as a result of human error, could harm our business,” and "-A failure to maintain the security, integrity, confidentiality or privacy of our telecommunication, information technology or other operational systems, or the sensitive data residing on such systems, could harm our business."

We may not be able to protect our intellectual property and may be subject to infringement claims.

We rely on a combination of contracts and copyright, trademark, patent and trade secret laws to protect our intellectual property. Although we endeavor to protect our rights, third parties may infringe upon or misappropriate our intellectual property. We may have to litigate to enforce and protect our copyrights, trademarks, patents and trade secrets or to determine their scope, validity or enforceability. This would represent a diversion of resources that may be significant and our efforts may not prove successful. The inability to secure or protect our intellectual property could have a material adverse effect on our business and our ability to compete.

We may also be subject to claims by third parties for (i) patent, trademark or copyright infringement, (ii) breach of contractual patent, trademark or copyright license rights, or (iii) misappropriation of trade secrets. Any such claims and any resulting litigation could result in significant expense and liability for damages. If we were found to have infringed or misappropriated a third-party patent or other intellectual property right, we could in some circumstances be enjoined from providing certain products or services to our customers or from utilizing and benefiting from certain methods, processes, technology copyrights, trademarks, trade secrets or licenses. Alternatively, we could be required to enter into costly licensing arrangements with third parties or implement a costly work around. Any of these scenarios could have a material adverse effect on our business and results of operations.

Risks Related to Our Closed Block of Variable Annuities

Although we no longer actively market retail variable annuities with substantial guarantee features, our business, results of operations, financial condition and liquidity will continue to be affected by our closed block of variable annuity products for the foreseeable future.

Our closed block of retail variable annuities were sold primarily from 2001 to early 2010 when the block entered run-off. These products offered long-term savings vehicles in which customers (policyholders) made deposits that were invested, largely at the customer's direction, in a variety of U.S. and international equity, fixed income, real estate and other investment options. In addition, these products provided customers with the option to purchase living benefit riders, including GMWBL, GMIB, GMAB and GMWB. All retail variable annuity products include ("GMDB"). In 2009, we decided to cease sales of retail variable annuity products with substantial guarantee features. In early 2010, we ceased all new sales of these products with substantial guarantees, although we continue to accept new deposits in accordance with, and subject to the limitations of, the provisions of existing contracts. In some cases, these additional deposits may increase the guarantee available to the policyholder.

Market movements and actuarial assumption changes (including, with respect to policyholder behavior and mortality) can result in material adverse impacts to our results of operations, financial condition and liquidity. Because policyholders have various contractual rights to defer withdrawals, annuitization and/or maturity of their contracts, the nature and period of contract maturity is subject to policyholder behavior and is therefore indeterminate. Future market movements and changes in actuarial assumptions can result in significant earnings and liquidity impacts, as well as increases in regulatory reserve and capital requirements for this closed block.

Our closed block of variable annuities is subject to market risks.

Our closed block of variable annuities is subject to a number of market risks, primarily associated with U.S. and other global equity market values and interest rates. For example, declining equity market values, increasing equity market volatility, declining interest rates or a prolonged period of low interest rates can result in an increase in the valuation of future policy benefits, reducing our net income or resulting in net losses. Declining market values for bonds and equities also reduce the account balances of our variable annuity contracts, and since we collect fees and risk charges based on these account balances, our net income may be further reduced.

Declining interest rates, a prolonged period of low interest rates, increased equity market volatility or declining equity market values may also subject us to increased hedging costs. Market events can cause an increase in the amount of statutory reserves that we are required to hold for variable annuity guarantees, lowering our statutory surplus. An increase in interest rates could result in decreased fee income associated with a decline in the value of variable annuity account balances invested in fixed income funds, which also might affect the value of the underlying guarantees within these variable annuities.

We hedge some, but not all, of the market risk to which our closed block of variable annuities is exposed. To the extent that market conditions develop for which we do not have adequate hedge protection, our results of operations and financial condition could be materially and adversely affected.

The performance of our closed block of variable annuity products depends on assumptions that may not be accurate.

Our in-force closed block of variable annuity products is subject to risks associated with the future behavior of policyholders and future claims payment patterns, using assumptions for mortality experience, lapse rates, GMIB annuitization rates and GMWBL withdrawal rates. We are required to make assumptions about these behaviors and patterns, which may not reflect the actual behaviors and patterns we experience in the future. It is possible that future assumption changes could produce reserve changes that could be material, before considering the impact of reinsurance with RRII.

In particular, we have only minimal experience regarding the long-term implications of policyholder behavior for our GMIB products and as a result, future experience could lead to significant changes in our assumptions. Our GMIB contracts, most of which were issued during the period from 2004 to 2006, have a ten-year waiting period before annuitization is available. These contracts first became eligible to annuitize during the period from 2014 through 2016, but contain significant incentives to delay annuitization beyond the first eligibility date. In recent years, we have made several income enhancement offers to holders of particular series of GMIB contracts, under which policyholders were offered an incentive to annuitize prior to the end of the waiting period, and we have waived the remaining waiting period on these GMIB contracts. As a result, although we have increased experience on policyholder behavior for the first opportunity to annuitize, including from the acceptance rates of the income enhancement offers, we continue to have only a statistically small sample of experience used to set annuitization rates beyond the maximum rollup period. Therefore, we anticipate that observable experience data will become statistically credible later in this decade, when a large volume of GMIB benefits begin to reach their maximum rollup period over the period from 2019 to 2022.

Similarly, most of our GMWBL contracts were issued during the period from 2006 to 2009, so our assumptions for withdrawal from contracts with GMWBL benefits may change as experience emerges. In addition, many of our GMWBL contracts contain significant incentives to delay withdrawal with the GMWBL benefits reaching their maximum rollup over the period from 2016 to 2019. Our experience for GMWBL contracts has recently become more credible, however it is possible that policyholders may choose to withdraw sooner or later than our current best estimate assumes. We expect customer decisions on withdrawal will be influenced by their financial plans and needs as well as by market conditions over time and by the availability and features of competing products.

We also make estimates of expected lapse rates, which represent the probability that a policy will not remain in force from one period to the next, for our in-force closed block of variable annuity products. Lapse rates of our variable annuity contracts may be significantly impacted by the value of guaranteed minimum benefits relative to the value of the underlying separate accounts (account value or account balance). In general, policies with guarantees that are “in the money” are assumed to be less likely to lapse. Conversely, “out of the money” guarantees are assumed to be more likely to lapse as the policyholder has less incentive to retain the policy. Lapse rates could also be adversely affected generally by developments that affect customer perception of us.

Our variable annuity lapse rate experience has varied significantly over the period from 2006 to the present, reflecting among other factors, both pre-and post-financial crisis experience. Relative to our current expectations, actual lapse rates have generally demonstrated a declining trend over the period from 2006 to the present. We analyze actual experience over that entire period, as we believe that over the duration of the variable annuity policies we may experience the full range of policyholder behavior and

market conditions. However, management's current best estimate of variable annuity policyholder lapse behavior is weighted more heavily toward more recent experience, as the last three years of data have shown a more consistent trend of lapse behavior.

Actual lapse rates that are lower than our lapse rate assumptions could have an adverse effect on profitability in the later years of a block of business because the anticipated claims experience may be higher than expected in these later years, and, as discussed above, future reserve increases in connection with experience updates could be material and adverse to the results of operations or financial condition of the Company.

We make estimates regarding mortality, which refers to the ceasing of life contingent benefit payments due to the death of the annuitant. Mortality also refers to the incidence of death amongst policyholders triggering the payment of Guaranteed Minimum Death Benefits. We use a combination of actual and industry experience when setting our mortality assumptions.

We review overall policyholder experience at least annually (including lapse, annuitization, withdrawal and mortality), and update these assumptions when deemed necessary based on additional information that becomes available. As customer experience continues to materialize, we may adjust our assumptions. The magnitude of any required changes could be material and adverse to the results of operations or financial condition of the Company if RRII, the reinsurer of our guaranteed living benefits, fails to meet its obligations under the reinsurance contract.

Our variable annuity hedge program may not be effective and may be more costly than anticipated.

We periodically re-evaluate our variable annuity hedge program to respond to changing market conditions and balance the trade-offs among several important factors, including regulatory reserves, rating agency capital, underlying economics, earnings and other factors. While our variable annuity hedge program is intended to balance numerous critical metrics, we are subject to the risk that our strategies and other management decisions may prove ineffective or that unexpected policyholder experience, alone or in combination with unfavorable market events, may produce losses or unanticipated cash needs beyond the scope of the risk management strategies employed. The variable annuity hedge program assumes that hedge positions can be rebalanced during a market shock and that the performance of the derivative contracts reasonably matches the performance of the contract owners' variable fund returns. In addition, our variable annuity hedge program does not hedge certain non-market risks inherent in this segment, including business, credit, insurance and operational risks; any of these risks could cause us to experience unanticipated losses or cash needs. For example, hedging counterparties may fail to perform their obligations resulting in unhedged exposures and losses on positions that are not collateralized. Finally, the cost of the variable annuity hedge program itself may be greater than anticipated as adverse market conditions can limit the availability and increase the costs of the hedging instruments we employ, and such costs may not be recovered in the pricing of the underlying products being hedged. For example, the cost of hedging guaranteed minimum benefits increases as market volatilities increase and/or interest rates decrease, resulting in a reduction to net income.

Risks Related to Regulation

Our businesses and those of our affiliates are heavily regulated and changes in regulation or the application of regulation may reduce our profitability.

We are subject to detailed insurance, securities and other financial services laws and government regulation. In addition to the insurance, securities and other regulations and laws specific to the industries in which we operate, regulatory agencies have broad administrative power over many aspects of our business, which may include ethical issues, money laundering, privacy, recordkeeping and marketing and sales practices. Also, bank regulators and other supervisory authorities in the United States and elsewhere continue to scrutinize payment processing and other transactions under regulations governing such matters as money-laundering, prohibited transactions with countries subject to sanctions, and bribery or other anti-corruption measures.

Compliance with applicable laws and regulations is time consuming and personnel-intensive, and changes in laws and regulations may materially increase the cost of compliance and other expenses of doing business. There are a number of risks that may arise where applicable regulations may be unclear, subject to multiple interpretations or under development or where regulations may conflict with one another, where regulators revise their previous guidance or courts overturn previous rulings, which could result in our failure to meet applicable standards. Regulators and other authorities have the power to bring administrative or judicial proceedings against us, which could result, among other things, in suspension or revocation of our licenses, cease and desist orders, fines, civil penalties, criminal penalties or other disciplinary action which could materially harm our results of operations and financial condition. If we fail to address, or appear to fail to address, appropriately any of these matters, our reputation could be harmed and we could be subject to additional legal risk, which could increase the size and number of claims and damages asserted

against us or subject us to enforcement actions, fines and penalties. See "Item 1. Business - Regulation" for further discussion on the impact of regulations on our businesses.

Our businesses are heavily regulated, and changes in regulation in the United States, enforcement actions and regulatory investigations may reduce profitability.

Our operations are subject to comprehensive regulation and supervision throughout the United States. State insurance laws regulate most aspects of our insurance business and we are regulated by the insurance department of our state of domicile, Iowa. The primary purpose of state regulation is to protect policyholders, and not necessarily to protect creditors and investors. See "Item 1. Business - Regulation-Insurance Regulation".

State insurance guaranty associations have the right to assess insurance companies doing business in their state in order to help pay the obligations of insolvent insurance companies to policyholders and claimants. Because the amount and timing of an assessment is beyond our control, liabilities we have currently established for these potential assessments may not be adequate.

State insurance regulators, the NAIC and other regulatory bodies regularly reexamine existing laws and regulations applicable to insurance companies and their products and their affiliated transactions. Changes in these laws and regulations, or in interpretations thereof, are often made for the benefit of the consumer at the expense of the insurer and could materially and adversely affect our business, results of operations or financial condition. We currently use our affiliated Arizona captive, RRII to reinsure certain of our variable annuities. Uncertainties associated with continued use of our affiliated Arizona captive company are primarily related to potential regulatory changes. In June 2014, the NAIC adopted a new regulatory framework for captives assuming business governed by Regulators XXX or AXXX, called the "Rector framework". In December 2014, the NAIC adopted Actuarial Guideline 48 (“AG48”) which established a new regulatory requirement applicable to XXX and AG38 reserves ceded to reinsurers, including affiliated reinsurers, as the first step in implementing the Rector framework. As adopted, AG48 limits the type of assets that may be used as collateral to cover the XXX and AG38 statutory reserves and is applied prospectively to existing reinsurance transactions that reinsure policies issued on or after January 1, 2015 and new reinsurance transactions entered into on or after January 1, 2015. The purpose of AG48 was to implement the substantive requirements of the Rector Framework, effective January 1, 2015, pending development and adoption by the states of the new XXX/AXXX Regulation. The NAIC charged multiple working groups with the responsibility to prepare the XXX/AXXX Regulation and in December 2016, the NAIC adopted the XXX/AXXX Regulation and amended AG48 to align its provisions with the XXX/AXXX Regulation. In 2014, the NAIC also considered a proposal to require states to apply NAIC accreditation standards, applicable to traditional insurers, to captive reinsurers. In 2015, the NAIC adopted such a proposal, in the form of a revised preamble to the NAIC accreditation standards (the “Standard”), with an effective date of January 1, 2016 for application of the Standard to captives that assume XXX or AXXX business. Under the Standard, a state will be deemed in compliance as it relates to XXX or AXXX captives if the applicable reinsurance transaction satisfies AG48. In addition, the Standard applies prospectively, so that XXX or AXXX captives will not be subject to the Standard if reinsured policies were issued prior to January 1, 2015 and ceded so that they were part of a reinsurance arrangement as of December 31, 2014. The NAIC left for future action application of the Standard to captives that assume variable annuity business. As drafted, it appears that the Standard would apply to our affiliated Arizona captives.

During 2015, The NAIC Financial Conditions (E) Committee (the “E Committee”) established the Variable Annuities Issues (E) Working Group (“VAIWG”) to oversee the NAIC’s efforts to study and address, as appropriate, regulatory issues resulting in variable annuity captive reinsurance transactions. In November 2015, upon recommendation of the VAIWG, the E Committee adopted a Variable Annuities Framework for Change (the “VA Framework for Change”) which recommends charges for NAIC working groups to adjust the variable annuity statutory framework applicable to all insurers that have written or are writing variable annuity business. The VA Framework for Change contemplates a holistic set of reforms that would improve the current reserve and capital framework and address root cause issues that result in the use of captive arrangements but would not mandate recapture by insurers of VA cessions to captives. In November 2015, VAIWG engaged Oliver Wyman ("OW") to conduct a quantitative impact study involving industry participants including the Company, of various reforms outlined in the VA Framework for Change (the “QIS”). OW completed the QIS in July of 2016 and reported its initial findings to the VAIWG in late August. The OW report proposed certain revisions to the current VA reserve and capital framework and recommended a second quantitative impact study be conducted so that testing can inform the proper calibration for certain conceptual and/or preliminary parameters set out in the OW proposal. Following a fourth quarter 2016 public comment period and several meetings on the OW proposal, the VAIWG determined that a second quantitative impact study (the "QIS2") involving industry participants including us, will be conducted by OW. The QIS2 began in February 2017 and is expected to be completed by September 2017, with NAIC deliberations on QIS2 results during the fourth quarter of 2017. Although the QIS2 timetable indicates the VAIWG expects to complete its work in 2017, timing for implementation of changes to the current VA reserve and capital framework remains uncertain.

We cannot predict what revisions, if any, would be made to the XXX/AXXX Regulation or the Standard for application to captives that assume XXX or AXXX business, as states consider their adoption or undertake their implementation, to the VA Framework for Change proposal as a result of QIS2 and ongoing NAIC deliberations, or to the Standard, if adopted for variable annuity captives. It is also unclear whether these or other proposals will be adopted by the NAIC, or what additional actions and regulatory changes will result from the continued captives scrutiny and reform efforts by the NAIC and other regulatory bodies. Any regulatory action that limits our ability to achieve desired benefits from the use of or materially increases our cost of using captive reinsurance companies, either retroactively or prospectively, including, if adopted as proposed, without grandfathering provisions for existing captive variable annuity reinsurance entities, the Standard, could have a material adverse effect on our financial condition or results of operations.

Insurance regulators have implemented, or begun to implement significant changes in the way in which insurers must determine statutory reserves and capital, particularly for products with contractual guarantees such as variable annuities and universal life policies, and are considering further potentially significant changes in these requirements.

In addition, state insurance regulators have become more active in adopting and enforcing suitability standards with respect to sales of fixed and indexed annuities. In particular, the NAIC has adopted a revised SAT, which will, if enacted by the states, place new responsibilities upon issuing insurance companies with respect to the suitability of annuity sales, including responsibilities for training agents. Many states have already taken action to adopt provisions based on the SAT.

In addition to the foregoing risks, the financial services industry is the focus of increased regulatory scrutiny as various state and federal governmental agencies and self-regulatory organizations conduct inquiries and investigations into the products and practices of the financial services industries. For a description of certain regulatory inquiries affecting the Company, see the Litigation and Regulatory Matters section of the *Commitments and Contingencies* Note in our Financial Statements in Part II, Item 8. in this Annual Report on Form 10-K. It is possible that future regulatory inquiries or investigations involving the insurance industry generally, or the Company specifically, could materially and adversely affect our business, results of operations or financial condition.

In some cases, this regulatory scrutiny has led to legislation and regulation, or proposed legislation and regulation that could significantly affect the financial services industry, or has resulted in regulatory penalties, settlements and litigation. New laws, regulations and other regulatory actions aimed at the business practices under scrutiny could materially and adversely affect our business, results of operations or financial condition. The adoption of new laws and regulations, enforcement actions, or litigation, whether or not involving us, could influence the manner in which we distribute our products, result in negative coverage of the industry by the media, cause significant harm to our reputation and materially and adversely affect our business, results of operations or financial condition.

Our products are subject to extensive regulation and failure to meet any of the complex product requirements may reduce profitability.

Our annuity, retirement and investment products are subject to a complex and extensive array of state and federal tax, securities, insurance and employee benefit plan laws and regulations, which are administered and enforced by a number of different governmental and self-regulatory authorities, including state insurance regulators, state securities administrators, state banking authorities, the SEC, the Financial Industry Regulatory Authority ("FINRA"), the DOL, and the IRS.

For example, U.S. federal income tax law imposes requirements relating to insurance and annuity product design, administration and investments that are conditions for beneficial tax treatment of such products under the Internal Revenue Code. Additionally, state and federal securities and insurance laws impose requirements relating to insurance and annuity product design, offering and distribution and administration. Failure to administer product features in accordance with contract provisions or applicable law, or to meet any of these complex tax, securities, or insurance requirements could subject us to administrative penalties imposed by a particular governmental or self-regulatory authority, unanticipated costs associated with remedying such failure or other claims, harm to our reputation, interruption of our operations or adversely impact profitability.

The Dodd-Frank Act, its implementing regulations and other financial regulatory reform initiatives could have adverse consequences for the financial services industry, including us and/or materially affect our results of operations, financial condition or liquidity.

On July 21, 2010, the Dodd-Frank Act was signed into law. It effects comprehensive changes to the regulation of financial services in the United States. The Dodd-Frank Act directs existing and newly-created government agencies and bodies to perform studies and promulgate a multitude of regulations implementing the law, a process that has substantially advanced but is not yet complete.

While some studies have already been completed and the rule-making process is well underway, there continues to be uncertainty regarding the results of ongoing studies and the ultimate requirements of regulations that have not yet been adopted. Although the new presidential administration has indicated a desire to revise or reverse some of its provisions, the fate of these proposals is unclear, and we cannot predict with certainty how the Dodd-Frank Act will continue to affect the financial markets generally, or impact our business, ratings, results of operations, financial condition or liquidity. The Dodd-Frank Act's potential effects could include:

- If designated by the FSOC as a nonbank financial company subject to supervision by the Federal Reserve, we would become subject to a comprehensive system of prudential regulation, including, among other matters, minimum capital requirements, liquidity standards, credit exposure requirements, overall risk management requirements, management interlock prohibitions, a requirement to maintain a plan for rapid and orderly dissolution in the event of severe financial distress, stress testing, additional fees and assessments and restrictions on proprietary trading and certain investments. The exact scope and consequences of these standards are subject to ongoing rulemaking activity by various federal banking regulators and therefore are currently unclear. However, this comprehensive system of prudential regulation, if applied to us, would significantly impact the manner in which we operate and could materially and adversely impact the profitability of one or more of our business lines or the level of capital required to support our activities. In designating non-bank financial companies for heightened prudential regulation by the Federal Reserve, the FSOC considers, among other matters, their scope, size and potential impact of their activities on the financial stability of the United States.

- Title VII of the Dodd-Frank Act creates a new framework for regulation of the over-the-counter ("OTC") derivatives markets. As a result of the adoption of final rules by federal banking regulators and the CFTC in 2015 establishing margin requirements for non-centrally cleared derivatives, the amount of collateral we may be required to pledge in support of such transactions may increase under certain circumstances and will increase as a result of the requirement to pledge initial margin on non-centrally cleared derivatives commencing in 2020. Notwithstanding the broad categories of non-cash collateral permitted under the rules, higher capital charges on non-cash collateral applicable to our bank counterparties may significantly increase pricing of derivatives and restrict or eliminate certain types of eligible collateral that we have available to pledge, which could significantly increase our hedging costs, adversely affect the liquidity and yield of our investments, affect the profitability of our products or their attractiveness to our customers, or cause us to alter our hedging strategy or change the composition of the risks we do not hedge.

- The Dodd-Frank Act establishes the FIO within the Treasury Department. While not having a general supervisory or regulatory authority over the business of insurance, the director of this office performs various functions with respect to insurance, including participating in the FSOC's decisions regarding insurers to be designated for stricter regulation by the Federal Reserve. The Dodd-Frank Act also required the director of FIO to conduct a study on how to modernize and improve the system of insurance regulation in the United States and that report was issued in December 2013. FIO has an ongoing charge to monitor all aspects of the insurance industry and state regulatory developments, including those called for in its report and present options for federal involvement if deemed necessary.

The Dodd-Frank Act also includes various securities law reforms that may affect our business practices. See “Changes in U.S. federal and state securities laws and regulations may affect our operations and our profitability” below.

Although the full impact of the Dodd-Frank Act cannot be determined until the various studies mandated by the law are conducted and implementing regulations are adopted, many of the legislation's requirements could have profound and/or adverse consequences for the financial services industry, including for us. The Dodd-Frank Act could make it more expensive for us to conduct business, require us to make changes to our business model or satisfy increased capital requirements, subject us to greater regulatory scrutiny or to potential increases in whistleblower claims in light of the increased awards available to whistleblowers under the Act and have a material adverse effect on our results of operations or financial condition. Additionally, there is substantial uncertainty as to whether aspects of the Dodd-Frank Act or regulatory bodies established thereunder will be impacted by regulatory or legislative changes made by the Trump administration or Congress.

See "Item 1. Business - Regulation" for further discussion of the impact of the Dodd-Frank Act on our businesses.

Changes in U.S. federal and state securities laws and regulations may affect our operations and our profitability.

U.S. federal and state securities laws apply to sales of our variable annuity products (which are considered to be both insurance products and securities). In addition, certain fixed and indexed annuities we may offer may be registered as securities under the Securities Act. As a result, these products are subject to regulation by the SEC and FINRA. Our variable annuity products are

issued through separate accounts and the separate accounts are registered as investment companies under the Investment Company Act. Distribution of our annuity products registered as securities is affected by laws and regulations applicable to broker-dealers.

Securities laws and regulations are primarily intended to ensure the integrity of the financial markets and to protect investors in the securities markets or investment advisory or brokerage clients. These laws and regulations generally grant supervisory agencies broad administrative powers, including the power to limit or restrict the conduct of business for failure to comply with those laws and regulations. A number of changes have recently been proposed to the laws and regulations that govern the conduct of our registered insurance products business and our distributors that could have a material adverse effect on our results of operations and financial condition. For example, the Dodd-Frank Act authorizes the SEC to establish a standard of conduct applicable to brokers and dealers when providing personalized investment advice to retail customers. This standard of conduct would be to act in the best interest of the customer without regard to the financial or other interest of the broker or dealer providing the advice. The SEC has not yet decided whether to propose rules creating a uniform standard of conduct applicable to broker-dealers and investment advisers. Further, proposals have been made that the SEC establish a self-regulatory organization with respect to registered investment advisers, which could increase the level of regulatory oversight over them. Changes to these laws or regulations that restrict the conduct of our business could have an adverse effect on our results of operations and financial condition.

Changes to federal regulations could adversely affect our distribution model by restricting our ability to provide customers with advice.

In April 2016, the Department of Labor ("DOL") issued a final rule that will broaden the definition of "fiduciary" for purposes of Employment Retirement Income Security Act ("ERISA") and the Internal Revenue Code, as it applies to a person or entity providing investment advice with respect to ERISA plans or IRAs. The rule expands the circumstances in which providers of investment advice to ERISA plan sponsors and plan participants, and IRA investors, are deemed to act in a fiduciary capacity. The rule requires such providers to act in their clients' "best interests", not influenced by any conflicts of interest, including due to the direct or indirect receipt of compensation that varies based on the fiduciary’s investment recommendation. The rule is scheduled to take effect on April 10, 2017, but, as described below, it is currently uncertain whether the rule will be delayed, amended or repealed. If and when the rule takes effect, certain business activities in which we currently engage, such as IRA rollovers and other IRA sales, will become subject to a heightened fiduciary standard. Where VIAC is deemed to act in a fiduciary capacity, we will in certain cases need to either modify our sales and compensation practices or find an applicable exemption.

The DOL concurrently adopted a "best interest contract exemption" (“BIC”) intended to enable continuation of certain existing industry practices relating to receipt of commissions and other compensation. We expect this exemption to go into effect only if the rule does. While this exemption would enable us and our distributors to continue many historical practices - subject, among other things, to a heightened best interests standard and a requirement that compensation be “reasonable” - there are practical difficulties with relying on the exemption that we believe will limit its utility in certain markets, particularly the retail annuities market, where many of our current distributors are not able to rely on the exemption because they do not do business through regulated financial institutions. While it is too early to predict what impact this would have on our annuities and other businesses, we may experience a material decline in sales of products that can only be practicably sold in reliance on the BIC, such as variable annuities and fixed indexed annuities.

In addition, the rule may make it easier for the DOL in enforcement actions, and for plaintiffs' attorneys in litigation, to attempt to extend fiduciary status to, or to claim fiduciary or contractual breach by, advisors who would not be deemed fiduciaries under current regulations. Compliance with the proposed rule could also increase our overall operational costs for providing some of the services we currently provide.

President Trump issued a directive in February 2017 requiring the DOL to take certain actions with respect to the rule, which may result in its revision or a delay in its implementation beyond its April 10, 2017 first applicability date. On March 2, 2017 the DOL published in the Federal Register (i) a proposal to delay applicability of the rule for 60 days beyond April 10, 2017, which is subject to a 15-day notice-and-comment period, and (ii) a request for comments on whether and how the rule should be modified in furtherance of the presidential directive, which is subject to a 45-day notice and comment period. It is unclear whether the DOL will delay applicability of the rule after the close of the 15-day comment period, and whether, or to what extent, the DOL will revise the rule after the close of the 45-day comment period. On March 10, 2017, the DOL announced a temporary policy to not enforce compliance with the rule for a transition period while the DOL considers the proposed delay described above. This policy does not, however, extend to the enforcement of the rule with respect to IRAs or private rights of action, and therefore appears to provide incomplete relief in the event a delay is not finalized prior to April 10, 2017.

Changes in tax laws and interpretations of existing tax law could increase our tax costs, impact our ability to make distributions to Voya Financial, Inc. or make our insurance, annuity and investment products less attractive to customers.

While too early to meaningfully assess the prospects of specific provisions and their application to us, the interplay between the legislative agenda advanced by Congressional Republicans and that of the new presidential administration will likely impact our taxes and possibly make some of our insurance, annuity and investment products less attractive to customers. Additionally, the House has signaled interest in pursuing international tax reform, including a "cash flow regime" of border adjustments aimed at incentivizing U.S. jobs and helping to pay for (along with broadening the taxable income base) reducing overall corporate tax rates. Also viewed as possible revenue raisers are certain proposals uniquely affecting the industry such as those dealing with our dividend received deduction, benefit reserve deduction, and acquisition cost deduction. Moreover, states that stand to lose tax revenue as a consequence of such federal reform will be under pressure to enact additional measures of their own which could result in raising revenue from us and possibly make our products less attractive to our customers.

Proposals uniquely affecting the industry include modifying the dividends received deduction for life insurance company separate accounts which could significantly reduce or eliminate the dividends received deduction that we are able to claim for dividends received in separate accounts. As such, the dividend received deduction is a significant component of the difference between our actual tax expense and the expected tax expense currently determined using the federal statutory income tax rate of 35%. Also, interpretation and enforcement of existing tax law could change and could be applied to us as part of an IRS examination and increase our tax costs. In the course of such examinations, we have entered into agreements with the IRS to resolve issues related to: (1) the application of the Section 382 limitation, (2) whether certain derivative transactions qualify for hedge treatment, (3) the proper treatment of valid tax hedge gains and losses and (4) “other than temporary impairment” losses. These agreements may be superseded by future enacted laws, regulations or public guidance that increase our taxes and our effective tax rates.

Further, changes in tax rates as a consequence of tax reform could affect the amount of our deferred tax assets and deferred tax liabilities. A reduction in the top federal tax rate would result in lower deferred tax liabilities. Moreover, a reduction in the statutory deferred tax asset may impact the ability of the affected insurance subsidiaries to make distributions to us and consequently could negatively impact our ability to pay dividends to our stockholders and to service our debt.

Current U.S. federal income tax law permits tax-deferred accumulation of income earned under life insurance and annuity products, and permits exclusion from taxation of death benefits paid under life insurance contracts. Changes in tax laws that restrict these tax benefits could make some of our products less attractive to customers. Reductions in individual income tax rates or estate tax rates could also make some of our products less advantageous to customers. Changes in federal tax laws that reduce the amount an individual can contribute on a pre-tax basis to an employer-provided, tax-deferred product (either directly by reducing current limits or indirectly by changing the tax treatment of such contributions from exclusions to deductions) or changes that would limit an individual’s aggregate amount of tax-deferred savings could make our retirement products less attractive to customers.

Item 1B. Unresolved Staff Comments

Omitted as registrant is neither an accelerated filer nor a well-known seasoned issuer.

Item 2. Properties

Our principal office is located at 1475 Dunwoody Drive, West Chester, Pennsylvania, 19380-1478. Our annuity operations and customer service center are currently located at 909 Locust Street, Des Moines, Iowa 50309, and effective January 1, 2018 will be relocated to 699 Walnut Street, Des Moines, Iowa 50309. Our funding agreement business activities are located at 5780 Powers Ferry Road, N.W., Atlanta, Georgia 30327-4390. Our office space is leased or subleased by us or our other affiliates except for our location at 5780 Powers Ferry Road, N.W., Atlanta, Georgia.

Item 3. Legal Proceedings

See the Litigation and Regulatory Matters section of the *Commitments and Contingencies* Note in our Financial Statements in Part II, Item 8. in this Annual Report on Form 10-K for a description of our material legal proceedings.

Item 4. Mine Safety Disclosures

Not applicable.

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities
(Dollar amounts in millions, unless otherwise stated)

There is no public trading market for the common stock of VIAC. All of our outstanding common stock is owned by our parent, Voya Holdings Inc. ("Parent"), a direct, wholly owned subsidiary of Voya Financial, Inc.

Iowa insurance law imposes restrictions on an Iowa insurance company's ability to pay dividends to its parent. These restrictions are based in part on the prior year's statutory income and surplus. In general, dividends up to specified levels are considered ordinary and may be paid without prior approval. Dividends in larger amounts, or extraordinary dividends, are subject to approval by the Iowa Insurance Commission.

Under Iowa law, an extraordinary dividend or distribution is defined as a dividend or distribution that, together with other dividends or distributions made within the preceding twelve months, exceeds the greater of (1) ten percent (10.0%) of our earned statutory surplus at the prior year end or (2) our prior year statutory net gain from operations. Iowa law also prohibits an Iowa insurer from declaring or paying a dividend except out of its earned surplus unless prior insurance regulatory approval is obtained.

During the year ended December 31, 2016, we declared an ordinary dividend to our Parent in the amount of $373.0 million, which was paid to our Parent on June 27, 2016. During the year ended December 31, 2015, we paid an ordinary dividend of $394.0 million to our Parent.

During the year ended December 31, 2016, we did not pay an extraordinary distribution to our Parent. During the year ended December 31, 2015, we paid an extraordinary distribution in the amount of $98.0 million to our Parent.

During the years ended December 31, 2016, and 2015, we did not receive any capital contributions from our Parent.

Item 6. Selected Financial Data

Omitted pursuant to General Instruction I(2)(a) of Form 10-K.

Item 7. Management's Narrative Analysis of the Results of Operations and Financial Condition
(Dollar amounts in millions, unless otherwise stated)

For the purposes of the discussion in this Annual Report on Form 10-K, the terms "Company," "we," "our," "us" and "VIAC" refer to Voya Insurance and Annuity Company. We are a direct, wholly owned subsidiary of Voya Holdings Inc. ("Parent"), which is a direct, wholly owned subsidiary of Voya Financial, Inc.

The following discussion and analysis presents a review of our results of operations for the years ended December 31, 2016, 2015 and 2014 and financial condition as of December 31, 2016 and 2015. This item should be read in its entirety and in conjunction with the Financial Statements and related notes contained in Part II, Item 8. of this Annual Report on Form 10-K.

In addition to historical data, this discussion contains forward-looking statements about our business, operations and financial performance based on current expectations that involve risks, uncertainties and assumptions. Actual results may differ materially from those discussed in the forward-looking statements as a result of various factors. See "Note Concerning Forward-Looking Statements."

Overview

VIAC is a stock life insurance company domiciled in the State of Iowa and provides financial products and services in the United States. VIAC is authorized to conduct its insurance business in all states, except New York, and in the District of Columbia.

Products currently offered by us include fixed and indexed annuities, investment-only and payout annuities, designed to address customer needs for tax-advantaged savings, retirement needs and wealth-protection concerns. We also offer funding agreements. We stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010.

We derive our revenue mainly from (a) investment income earned on investments primarily related to annuity products with fixed investment options and funding agreements, (b) Fee income generated from separate account assets supporting variable options under variable annuity contract investments, as designated by contract owners, (c) Premiums, (d) realized capital gains (losses) on investments and product guarantees and (e) certain other management fees included in Other revenue. Our Benefits and expenses primarily consist of (a) Interest credited and other benefits to contract owners/policyholders, (b) amortization of DAC and VOBA and (c) Operating expenses which consist of expenses related to the selling and servicing of the various products offered by us and other general business expenses.

We have one operating segment.

The focus in managing our closed block of variable annuity products continues to be on protecting regulatory and rating agency capital, and our hedging program is primarily designed to mitigate the impacts of market movements on capital resources, rather than mitigating earnings volatility. We seek opportunities to accelerate the run-off of the block, where possible. For example, in recent years we have made several income enhancement offers to holders of a particular series of GMIB contracts, under which policy holders were offered an incentive to annuitize prior to the end of the waiting period, and we have waived the remaining waiting period on these GMIB contracts. In addition, in the first quarter of 2017 we launched our first GMIB enhanced surrender value offer, which provides certain GMIB policyholders an option to surrender their contracts in exchange for an enhancement to their contract's surrender value.

Critical Accounting Judgments and Estimates

General

The preparation of financial statements in conformity with accounting principles generally accepted in the United States ("U.S. GAAP") requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Critical estimates and assumptions are evaluated on an on-going basis based on historical developments, market conditions, industry trends and other information that is reasonable under the circumstances. There can be no assurance that actual results will conform to estimates and assumptions and that reported results of operations will not be materially affected by the need to make future accounting adjustments to reflect changes in these estimates and assumptions from time to time.

We have identified the following accounting judgments and estimates as critical in that they involve a higher degree of judgment and are subject to a significant degree of variability:

- Reserves for future policy benefits;
- Deferred policy acquisition costs ("DAC"), value of business acquired ("VOBA") and deferred sales inducements ("DSI");
- Valuation of investments and derivatives;
- Impairments;
- Income taxes; and
- Contingencies.

In developing these accounting estimates, we make subjective and complex judgments that are inherently uncertain and subject to material changes as facts and circumstances develop. Although variability is inherent in these estimates, we believe the amounts provided are appropriate based on the facts available upon preparation of the Financial Statements.

The above critical accounting estimates are described in the *Business, Basis of Presentation and Significant Accounting Policies* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K.

Reserves for Future Policy Benefits

The determination of future policy benefit reserves is dependent on actuarial assumptions. The principal assumptions used to establish liabilities for future policy benefits are based on our experience and periodically reviewed against industry standards. These assumptions include mortality, morbidity, policy lapse, contract renewal, payment of subsequent premiums or deposits by the contract owner, retirement, investment returns, inflation, benefit utilization and expenses. The assumptions used require considerable judgments. Changes in, or deviations from, the assumptions used can significantly affect our reserve levels and related results of operations.

- Mortality is the incidence of death among policyholders triggering the payment of underlying insurance coverage by the insurer. In addition, mortality also refers to the ceasing of payments on life-contingent annuities due to the death of the annuitant. We utilize a combination of actual and industry experience when setting our mortality assumptions.
- A lapse rate is the percentage of in-force policies surrendered by the policyholder or canceled by us due to non-payment of premiums. For certain of our variable products, the lapse rate assumption varies according to the current account value relative to guarantees associated with the product and applicable surrender charges. In general, policies with guarantees that are considered "in the money" (i.e., where the notional benefit amount is in excess of the account value) are assumed to be less likely to lapse or surrender. Conversely, "out of the money" guarantees may be assumed to be more likely to lapse or surrender as the policyholder has less incentive to retain the policy.

See the *Guaranteed Benefit Features* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information on our reserves for future policy benefits, contract owner account balances and product guarantees.

Insurance and Other Reserves

Reserves for traditional life insurance contracts (term insurance, participating and non-participating whole life insurance and traditional group life insurance) and accident and health insurance represent the present value of future benefits to be paid to or on behalf of contract owners and related expenses, less the present value of future net premiums. Assumptions as to interest rates, mortality, expenses and persistency are based on our estimates of anticipated experience at the period the policy is sold or acquired, including a provision for adverse deviation. Interest rates used to calculate the present value of these reserves ranged from 2.3% to 7.2%.

Reserves for payout contracts with life contingencies are equal to the present value of expected future payments. Assumptions as to interest rates, mortality and expenses are based on our estimates of experience at the period the policy is sold or acquired, including a provision for adverse deviation. Such assumptions generally vary by annuity plan type, year of issue and policy duration. Interest rates used to calculate the present value of future benefits ranged from 1.0% to 7.5%.

Although assumptions are "locked-in" upon the issuance of traditional life insurance contracts, certain accident and health insurance contracts and payout contracts with life contingencies, significant changes in experience or assumptions may require us to provide for expected future losses on a product by establishing premium deficiency reserves. Premium deficiency reserves are determined based on best estimate assumptions that exist at the time the premium deficiency reserve is established and do not include a provision for adverse deviation. During the years ended December 31, 2016 and 2015, we established premium deficiency reserves

of $36.3 million and $126.0 million, respectively, before income taxes, related to certain payout annuity contracts. These premium deficiency reserves were recorded as increases in Future policy benefits and contract owner account balances with corresponding increases in Deposits, premiums receivable and reinsurance recoverable, as the reserves are ceded to an affiliate on a 100% coinsurance and coinsurance funds withheld basis. The establishment of these premium deficiency reserves had no impact in the Statements of Operations for the years ended December 31, 2016 and 2015. We did not establish any premium deficiency reserves during the year ended December 31, 2014.

Product Guarantees and Index-crediting Features

The assumptions used to establish the liabilities for our product guarantees require considerable judgment and are established as management's best estimate of future outcomes. We periodically review these assumptions and, if necessary, update them based on additional information that becomes available. Changes in, or deviations from, the assumptions used can significantly affect our reserve levels and related results of operations.

GMDB and GMIB: Reserves for annuity guaranteed minimum death benefits ("GMDB") and guaranteed minimum income benefits ("GMIB") are determined by estimating the value of expected benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments. Expected experience is based on a range of scenarios. Assumptions used, such as the long-term equity market return, lapse rate and mortality, are consistent with assumptions used in estimating gross profits for the purpose of amortizing DAC. In addition, the reserve for the GMIB incorporates assumptions for the likelihood and timing of the potential annuitizations that may be elected by the contract owner. In general, we assume that GMIB annuitization rates will be higher for policies with more valuable ("in the money") guarantees.

GMAB, GMWB, GMWBL and FIA: We also issue certain products that contain embedded derivatives that are measured at estimated fair value separately from the host contract. These embedded derivatives include annuity guaranteed minimum accumulation benefits ("GMAB"), guaranteed minimum withdrawal benefits without life contingencies ("GMWB"), guaranteed minimum withdrawal benefits with life payouts ("GMWBL") and fixed indexed annuities ("FIAs").

At inception of the GMAB, GMWB and GMWBL contracts, we project a fee to be attributed to the embedded derivative portion of the guarantee equal to the present value of projected future guaranteed benefits. After inception, the estimated fair value of the GMAB, GMWB and GMWBL contracts is determined based on the present value of projected future guaranteed benefits, minus the present value of projected attributed fees. A risk neutral valuation methodology is used under which the cash flows from the guarantees are projected under multiple capital market scenarios using observable risk free rates. The projection of future guaranteed benefits and future attributed fees require the use of assumptions for capital markets (e.g., implied volatilities, correlation among indices, risk-free swap curve, etc.) and policyholder behavior (e.g., lapse, benefit utilization, mortality, etc.).

The estimated fair value of the embedded derivative in the FIA contracts is based on the present value of the excess of interest payments to the contract owners over the growth in the minimum guaranteed contract value. The excess interest payments are determined as the excess of projected index driven benefits over the projected guaranteed benefits. The projection horizon is over the anticipated life of the related contracts, which takes into account best estimate actuarial assumptions, such as partial withdrawals, full surrenders, deaths, annuitizations and maturities.

Certain FIA contracts contain guaranteed withdrawal benefit provisions. Reserves for these benefits are calculated by estimating the value of expected benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments.

The liabilities for the GMAB, GMWB, GMWBL and FIA embedded derivatives include a risk margin to capture uncertainties related to policyholder behavior assumptions. The margin represents additional compensation a market participant would require to assume these risks.

The discount rate used to determine the fair value of the liabilities for our GMAB, GMWB, GMWBL and FIA embedded derivatives includes an adjustment to reflect the risk that these obligations will not be fulfilled (“nonperformance risk”). Our nonperformance risk adjustment is based on a blend of observable, similarly rated peer holding company credit default swap ("CDS") spreads, adjusted to reflect the credit quality of VIAC, the issuer of the guarantee, as well as an adjustment to reflect the priority of policyholder claims. The table below presents the increase (decrease) to the fair value of these liabilities due to the nonperformance risk adjustment and the gain (loss) due to nonperformance risk as of and for the periods indicated:

($ in millions)

Nonperformance Risk Adjustment			Gain (Loss) due to Nonperformance Risk		
As of December 31,			For the year ended December 31,		
2016[1]	2015[1]	2014[1]	2016	2015	2014
$ (933.3)	$ (791.3)	$ (754.5)	$ 142.0	$ 36.8	$ 382.6

[1] Represents reduction to liabilities.

The favorable change of $142.0 million from $791.3 million as of December 31, 2015 to $933.3 million as of December 31, 2016 is primarily due to favorable changes in observable credit spreads, partially offset by decreases in associated reserves due to model changes and changes in capital markets. The favorable change of $36.8 million from $754.5 million as of December 31, 2014 to $791.3 million as of December 31, 2015 is primarily due to the increases in observable credit spreads and an increase in the associated reserves. The favorable change of $382.6 million from $371.9 million as of January 1, 2014 to $754.5 million as of December 31, 2014 is primarily due to the increases in observable credit spreads and an increase in the associated reserves.

Assumptions and Periodic Review

We review overall policyholder experience at least annually (including lapse, annuitization, withdrawal and mortality) and update these assumptions when deemed necessary, based on additional information that becomes available. If policyholder experience is significantly different from that assumed, this could have a significant effect on our reserve levels and related results of operations.

See the *Quantitative and Qualitative Disclosures About Market Risk* Section in Part II, Item 7A. of this Annual Report on Form 10-K for additional information regarding the specific hedging strategies and reinsurance we utilize to mitigate risk for the product guarantees, as well as sensitivities of the embedded derivative liabilities to changes in certain capital markets assumptions.

Deferred Policy Acquisition Costs, Value of Business Acquired and Deferred Sales Inducements

DAC represents policy acquisition costs that have been capitalized and are subject to amortization and interest. VOBA represents the outstanding value of in-force business acquired and is subject to amortization and interest. DSI represents benefits paid to contract owners for a specified period that are incremental to the amounts we credit on similar contracts without sales inducements and are higher than the contract's expected ongoing crediting rates for periods after the inducement.

See the *Deferred Policy Acquisition Costs and Value of Business Acquired* Note and the *Sales Inducements* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for additional information on DAC, VOBA and DSI.

Amortization Methodologies

We amortize DAC and VOBA related to universal life ("UL") and variable universal life ("VUL") contracts and fixed and variable deferred annuity contracts over the estimated lives of the contracts in relation to the emergence of estimated gross profits. Assumptions as to mortality, persistency, interest crediting rates, fee income, returns associated with separate account performance, impact of hedge performance, expenses to administer the business and certain economic variables, such as inflation, are based on our experience and overall capital markets. At each valuation date, estimated gross profits are updated with actual gross profits, and the assumptions underlying future estimated gross profits are evaluated for continued reasonableness. Adjustments to estimated gross profits require that amortization rates be revised retroactively to the date of the contract issuance ("unlocking"). If the update of assumptions causes estimated gross profits to increase, DAC and VOBA amortization will decrease, resulting in a current period increase to earnings. The opposite result occurs when the assumption update causes estimated gross profits to decrease. We amortize DSI over the estimated lives of the related contracts using the same methodology and assumptions used to amortize DAC.

Recoverability testing is performed for current issue year products to determine if gross profits are sufficient to cover DAC, VOBA and DSI, estimated benefits and related expenses. In subsequent periods, we perform testing to assess the recoverability of DAC, VOBA and DSI on an annual basis, or more frequently if circumstances indicate a potential loss recognition issue exists. If DAC,

VOBA or DSI are not deemed recoverable from future gross profits, charges will be applied against the DAC, VOBA or DSI balances before an additional reserve is established.

During the year ended December 31, 2016, our reviews resulted in loss recognition of $170.0 million before income taxes, of which $137.7 million and $32.3 million was recorded to Net amortization of DAC and VOBA and Interest credited and other benefits to contract owners, respectively, in the Statements of Operations, with a corresponding decrease on the Balance Sheets to Deferred policy acquisition costs, Value of business acquired, and Sales inducements to contract owners.

During the year ended December 31, 2015, our reviews resulted in loss recognition of $342.0 million before income taxes, of which $276.9 million and $65.1 million was recorded to Net amortization of DAC and VOBA and Interest credited and other benefits to contract owners, respectively, in the Statements of Operations, with a corresponding decrease on the Balance Sheets to Deferred policy acquisition costs, Value of business acquired, and Sales inducements to contract owners.

During the year ended December 31, 2014, our reviews resulted in no loss recognition.

Assumptions and Periodic Review

Changes in assumptions can have a significant impact on DAC, VOBA, and DSI, amortization rates, reserve levels, and results of operations. Assumptions are management's best estimate of future outcome. We periodically review these assumptions against actual experience and, based on additional information that becomes available, update our assumptions. Deviation of emerging experience from our assumptions could have a significant effect on our DAC, VOBA and DSI, reserves, and the related results of operations.

- One significant assumption is the assumed return associated with the variable account performance, which has historically had a greater impact on variable annuity than VUL products. To reflect the volatility in the equity markets, this assumption involves a combination of near-term expectations and long-term assumptions regarding market performance. The overall return on the variable account is dependent on multiple factors, including the relative mix of the underlying sub-accounts among bond funds and equity funds, as well as equity sector weightings. We use a reversion to the mean approach, which assumes that the market returns over the entire mean reversion period are consistent with a long-term level of equity market appreciation. We monitor market events and only change the assumption when sustained deviations are expected. This methodology incorporates a 9% long-term equity return assumption, a 14% cap and a five-year look-forward period.
- Another significant assumption used in the estimation of gross profits for certain products is mortality. We utilize a combination of actual and industry experience when setting our mortality assumptions, which are consistent with the assumptions used to calculate reserves for future policy benefits.
- Assumptions related to interest rate spreads and credit losses also impact estimated gross profits for all applicable products with credited rates. These assumptions are based on the current investment portfolio yields and credit quality, estimated future crediting rates, capital markets, and estimates of future interest rates and defaults.
- Other significant assumptions include estimated policyholder behavior assumptions, such as surrender, lapse, and annuitization rates. We use a combination of actual and industry experience when setting and updating our policyholder behavior assumptions, and such assumptions require considerable judgment. Estimated gross profits for our variable annuity contracts are particularly sensitive to these assumptions.

We include the impact of the change in value of the embedded derivatives associated with the GMAB, GMWB, GMWBL and FIA contracts in gross profits for purposes of determining DAC amortization.

During the third quarter of 2016, 2015 and 2014, we conducted our annual review of assumptions, including projection model inputs. As a result of these reviews, we made a number of changes, which resulted in favorable (unfavorable) impacts on Income (loss) before income taxes of $102.7 million, $(34.3) million, and $231.7 million in 2016, 2015, and 2014, respectively, of which $34.7 million, $(83.0) million, and $108.4 million, respectively, was related to DAC, VOBA and DSI unlocking.

Sensitivity

We perform sensitivity analyses to assess the impact that certain assumptions have on DAC, VOBA and DSI, as well as certain reserves. The following table presents the estimated instantaneous net impact to income before income taxes of various assumption changes on our DAC, VOBA and DSI balances and the impact on related reserves for future policy benefits and reinsurance. The effects are not representative of the aggregate impacts that could result if a combination of such changes to equity markets, interest rates and other assumptions occurred. (Assumptions regarding shifts in market factors may be overly simplistic and not indicative of actual market behavior in stress scenarios.)

($ in millions)	As of December 31, 2016	
Decrease in long-term equity rate of return assumption by 100 basis points	$	54.4 [1]
A change to the long-term interest rate assumption of -50 basis points		102.9 [2]
A change to the long-term interest rate assumption of +50 basis points		(53.6)
An assumed increase in future mortality by 1%		(5.5)

[1] Additionally the assumption changes would result in loss recognition of approximately $25 million to $125 million.
[2] Additionally the assumption changes would result in loss recognition of approximately $75 million to $175 million.

Valuation of Investments and Derivatives

Our investment portfolio consists of public and private fixed maturity securities, commercial mortgage and other loans, equity securities, short-term investments, other invested assets and derivative financial instruments. We enter into interest rate, equity market, credit default and currency contracts, including swaps, futures, forwards, caps, floors and options, to reduce and manage various risks associated with changes in value, yield, price, cash flow or exchange rates of assets or liabilities held or intended to be held, or to assume or reduce credit exposure associated with a referenced asset, index or pool. We also utilize options and futures on equity indices to reduce and manage risks associated with our annuity products.

See the *Investments* Note and the *Derivative Financial Instruments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information.

Investments

We measure the fair value of our financial assets and liabilities based on assumptions used by market participants in pricing the asset or liability, which may include inherent risk, restrictions on the sale or use of an asset, or nonperformance risk, including our own credit risk. The estimate of fair value is the price that would be received to sell an asset or transfer a liability ("exit price") in an orderly transaction between market participants in the principal market, or the most advantageous market in the absence of a principal market, for that asset or liability. We use a number of valuation sources to determine the fair values of our financial assets and liabilities, including quoted market prices, third-party commercial pricing services, third-party brokers, industry-standard, vendor-provided software that models the value based on market observable inputs, and other internal modeling techniques based on projected cash flows.

We categorize our financial instruments into a three-level hierarchy based on the priority of the inputs to the valuation technique. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure fair value fall within different levels of the hierarchy, the category level is based on the lowest priority level input that is significant to the fair value measurement of the instrument.

When available, the estimated fair value of securities is based on quoted prices in active markets that are readily and regularly obtainable. When quoted prices in active markets are not available, the determination of estimated fair value is based on market standard valuation methodologies, including discounted cash flows, matrix pricing or other similar techniques. Inputs to these methodologies include, but are not limited to, market observable inputs such as benchmark yields, credit quality, issuer spreads, bids, offers and cash flow characteristics of the security. For privately placed bonds, we also consider such factors as the net worth

of the borrower, value of the collateral, the capital structure of the borrower, the presence of guarantees, and the borrower's ability to compete in its relevant market. Valuations are reviewed and validated monthly by an internal valuation committee using price variance reports, comparisons to internal pricing models, back testing of recent trades, and monitoring of trading volumes, as appropriate.

The valuation of financial assets and liabilities involves considerable judgment, is subject to considerable variability, is established using management's best estimate, and is revised as additional information becomes available. As such, changes in, or deviations from, the assumptions used in such valuations can significantly affect our results of operations. Financial markets are subject to significant movements in valuation and liquidity, which can impact our ability to liquidate and the selling price that can be realized for our securities.

Derivatives

Derivatives are carried at fair value, which is determined by using observable key financial data, such as yield curves, exchange rates, S&P 500 prices, London Interbank Offered Rates ("LIBOR") and Overnight Index Swap Rates ("OIS") or through values established by third-party sources, such as brokers. Valuations for our futures contracts are based on unadjusted quoted prices from an active exchange. Counterparty credit risk is considered and incorporated in our valuation process through counterparty credit rating requirements and monitoring of overall exposure. Our own credit risk is also considered and incorporated in our valuation process.

We have certain CDS and options that are priced using models that primarily use market observable inputs, but contain inputs that are not observable to market participants.

We also have investments in certain fixed maturities and have issued certain annuity products that contain embedded derivatives for which fair value is at least partially determined by levels of or changes in domestic and/or foreign interest rates (short-term or long-term), exchange rates, prepayment rates, equity markets, or credit ratings/spreads. The fair values of these embedded derivatives are determined using prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. For additional information regarding the valuation of and significant assumptions associated with embedded derivatives associated with certain annuity contracts, see the "Reserves for Future Policy Benefits" section.

In addition, we have entered into coinsurance with funds withheld reinsurance arrangements that contain embedded derivatives. The fair value of the embedded derivatives is based on the change in the fair value of the underlying assets held in the trust using the valuation methods and assumptions described for our investments held.

The valuation of derivatives involves considerable judgment, is subject to considerable variability, is established using management's best estimate and is revised as additional information becomes available. As such, changes in, or deviations from, these assumptions used in such valuations can have a significant effect on our results of operations.

For additional information regarding the fair value of our investments and derivatives, see the *Fair Value Measurements* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K.

Impairments

We evaluate our available-for-sale general account investments quarterly to determine whether there has been an other-than-temporary decline in fair value below the amortized cost basis. This evaluation process entails considerable judgment and estimation. Factors considered in this analysis include, but are not limited to, the length of time and the extent to which the fair value has been less than amortized cost, the issuer's financial condition and near-term prospects, future economic conditions and market forecasts, interest rate changes and changes in ratings of the security. An extended and severe unrealized loss position on a fixed maturity may not have any impact on: (a) the ability of the issuer to service all scheduled interest and principal payments and (b) the evaluation of recoverability of all contractual cash flows or the ability to recover an amount at least equal to its amortized cost based on the present value of the expected future cash flows to be collected. In contrast, for certain equity securities, we give greater weight and consideration to a decline in market value and the likelihood such market value decline will recover.

When assessing our intent to sell a security, or if it is more likely than not we will be required to sell a security before recovery of its amortized cost basis, we evaluate facts and circumstances such as, but not limited to, decisions to rebalance the investment portfolio and sales of investments to meet cash flow or capital needs.

We use the following methodology and significant inputs to determine the amount of the OTTI credit loss:

- When determining collectability and the period over which the value is expected to recover for U.S. and foreign corporate securities, foreign government securities and state and political subdivision securities, we apply the same considerations utilized in our overall impairment evaluation process, which incorporates information regarding the specific security, the industry and geographic area in which the issuer operates and overall macroeconomic conditions. Projected future cash flows are estimated using assumptions derived from our best estimates of likely scenario-based outcomes, after giving consideration to a variety of variables that includes, but is not limited to: general payment terms of the security; the likelihood that the issuer can service the scheduled interest and principal payments; the quality and amount of any credit enhancements; the security's position within the capital structure of the issuer; possible corporate restructurings or asset sales by the issuer; and changes to the rating of the security or the issuer by rating agencies.
- Additional considerations are made when assessing the unique features that apply to certain structured securities, such as subprime, Alt-A, non-agency RMBS, CMBS and ABS. These additional factors for structured securities include, but are not limited to: the quality of underlying collateral; expected prepayment speeds; loan-to-value ratio; debt service coverage ratios; current and forecasted loss severity; consideration of the payment terms of the underlying assets backing a particular security; and the payment priority within the tranche structure of the security.
- When determining the amount of the credit loss for U.S. and foreign corporate securities, foreign government securities and state and political subdivision securities, we consider the estimated fair value as the recovery value when available information does not indicate that another value is more appropriate. When information is identified that indicates a recovery value other than estimated fair value, we consider in the determination of recovery value the same considerations utilized in its overall impairment evaluation process, which incorporates available information and our best estimate of scenario-based outcomes regarding the specific security and issuer; possible corporate restructurings or asset sales by the issuer; the quality and amount of any credit enhancements; the security's position within the capital structure of the issuer; fundamentals of the industry and geographic area in which the security issuer operates; and the overall macroeconomic conditions.
- We perform a discounted cash flow analysis comparing the current amortized cost of a security to the present value of future cash flows expected to be received, including estimated defaults and prepayments. The discount rate is generally the effective interest rate of the fixed maturity prior to impairment.

Mortgage loans on real estate are all commercial mortgage loans. If a mortgage loan is determined to be impaired (i.e., when it is probable that we will be unable to collect all amounts due according to the contractual terms of the loan agreement), the carrying value of the mortgage loan is reduced to the lower of either the present value of expected cash flows from the loan, discounted at the loan's original purchase yield, or the fair value of the collateral. For those mortgages that are determined to require foreclosure, the carrying value is reduced to the fair value of the underlying collateral, net of estimated costs to obtain and sell at the point of foreclosure.

Impairment analysis of the investment portfolio involves considerable judgment, is subject to considerable variability, is established using management's best estimate and is revised as additional information becomes available. As such, changes in, or deviations from, the assumptions used in such analysis can have a significant effect on the results of operations.

For additional information regarding the evaluation process for impairments, see the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K.

Income Taxes

The results of our operations are included in the consolidated tax return of Voya Financial, Inc. Generally, our Financial Statements recognize the current and deferred income tax consequences that result from our activities during the current and preceding periods pursuant to the provisions of ASC Topic 740, "Income Taxes" as if we were a separate taxpayer rather than a member of Voya Financial, Inc.'s consolidated income tax return group, with the exception of any net operating loss carryforwards and capital loss carryforwards, which are recorded pursuant to the tax sharing agreement.

Under our tax sharing agreement, Voya Financial, Inc. will pay us for the tax benefits of ordinary and capital losses only in the event that the consolidated tax group actually uses the tax benefit of losses generated.

Valuation Allowances

We use certain assumptions and estimates in determining the income taxes payable or refundable to/from Voya Financial, Inc. for the current year, the deferred income tax liabilities and assets for items recognized differently in our Financial Statements from amounts shown on our income tax returns and the federal income tax expense. Determining these amounts requires analysis and interpretation of current tax laws and regulations, including the loss limitation rules associated with change in control. We exercise considerable judgment in evaluating the amount and timing of recognition of the resulting income tax liabilities and assets. These judgments and estimates are reevaluated on a periodic basis. We will continue to evaluate as regulatory and business factors change.

Deferred tax assets represent the tax benefit of future deductible temporary differences, net operating loss carryforwards, and tax credit carryforwards. We evaluate and test the recoverability of deferred tax assets. Deferred tax assets are reduced by a valuation allowance if, based on the weight of evidence, it is more likely than not that some portion, or all, of the deferred tax assets will not be realized. Considerable judgment and the use of estimates are required in determining whether a valuation allowance is necessary and, if so, the amount of such valuation allowance. In evaluating the need for a valuation allowance, we consider many factors, including:

- The nature, frequency and severity of book income or losses in recent years;
- The nature and character of the deferred tax assets and liabilities;
- The recent cumulative book income (loss) position after adjustment for permanent differences;
- Taxable income in prior carryback years;
- Projected future taxable income, exclusive of reversing temporary differences and carryforwards;
- Projected future reversals of existing temporary differences;
- The length of time carryforwards can be utilized;
- Prudent and feasible tax planning strategies we would employ to avoid a tax benefit from expiring unused; and
- Tax rules that would impact the utilization of the deferred tax assets.

As of December 31, 2016, we have recognized $112.7 million of deferred tax assets based on tax planning strategies related to unrealized gains on investment assets. These tax planning strategies support the recognition of deferred tax assets, which have been provided on deductible temporary differences, and may be adversely impacted by decreases in unrealized gains.

We recorded the following valuation allowances:

	As of December 31,	
($ in millions)	**2016**	**2015**
Deferred tax assets	$ 733.5 [1]	$ 597.4 [2]

[1] Includes $728.4 million and $5.1 million related to ordinary deferred tax assets and foreign tax credits, respectively.

[2] Includes $590.6 million and $6.8 million related to ordinary deferred tax assets and foreign tax credits, respectively.

Tax Contingencies

In establishing unrecognized tax benefits, we determine whether a tax position is more likely than not to be sustained under examination by the appropriate taxing authority. We also consider positions that have been reviewed and agreed to as part of an examination by the appropriate taxing authority. Tax positions that do not meet the more likely than not standard are not recognized. Tax positions that meet this standard are recognized in our Financial Statements. We measure the tax position as the largest amount of benefit that is greater than 50% likely of being realized upon ultimate resolution with the taxing authority that has full knowledge of all relevant information.

Changes in Law

Certain changes or future events, such as changes in tax legislation, completion of tax audits, planning opportunities and expectations about future outcomes could have an impact on our estimates of valuation allowances, deferred taxes, tax provisions and effective tax rates.

For example, a reduction in the corporate tax rate would most likely result in a tax benefit based on the fact that, as of December 31, 2016, we have a deferred tax liability. Conversely, an increase in the corporate tax rate would most likely result in an additional tax expense.

Contingencies

A loss contingency is an existing condition, situation or set of circumstances involving uncertainty as to possible loss that will ultimately be resolved when one or more future events occur or fail to occur. Examples of loss contingencies include pending or threatened adverse litigation, threat of expropriation of assets and actual or possible claims and assessments. Amounts related to loss contingencies involve considerable judgments and are accrued if it is probable that a loss has been incurred and the amount can be reasonably estimated, based on our best estimate of the ultimate outcome. Reserves are established reflecting management's best estimate, reviewed on a quarterly basis and revised as additional information becomes available. When a loss contingency is reasonably possible, but not probable, disclosure is made of our best estimate of possible loss, or the range of possible loss, or a statement is made that such an estimate cannot be made.

We are involved in threatened or pending lawsuits/arbitrations arising from the normal conduct of business. Due to the climate in insurance and business litigation/arbitration, suits against us sometimes include claims for substantial compensatory, consequential or punitive damages and other types of relief. Moreover, certain claims are asserted as class actions, purporting to represent a group of similarly situated individuals. It is not always possible to accurately estimate the outcome of such lawsuits/arbitrations. Therefore, changes to such estimates could be material. As facts and circumstances change, our estimates are revised accordingly. Our reserves reflect management's best estimate of the ultimate resolution.

Impact of New Accounting Pronouncements

For information regarding the impact of new accounting pronouncements, see the *Business, Basis of Presentation and Significant Accounting Policies* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K.

Results of Operations

($ in millions)	Year Ended December 31, 2016	2015	2014
Revenues:			
Net investment income	$ 1,362.5	$ 1,305.5	$ 1,264.7
Fee income	627.3	718.7	824.8
Premiums	496.5	505.8	537.8
Net realized capital losses:			
Total other-than-temporary impairments	(8.5)	(30.3)	(6.0)
Less: Portion of other-than-temporary impairments recognized in Other comprehensive income (loss)	1.5	2.5	(0.3)
Net other-than-temporary impairments recognized in earnings	(10.0)	(32.8)	(5.7)
Other net realized capital losses	(874.9)	(98.8)	(768.4)
Total net realized capital losses	(884.9)	(131.6)	(774.1)
Other revenue	16.9	19.7	29.8
Total revenues	1,618.3	2,418.1	1,883.0
Benefits and expenses:			
Interest credited and other benefits to contract owners/policyholders	557.6	1,290.6	1,391.9
Operating expenses	463.0	486.2	489.6
Net amortization of deferred policy acquisition costs and value of business acquired	423.0	667.0	(116.0)
Interest expense	28.3	28.2	28.2
Other expense	11.2	25.1	16.9
Total benefits and expenses	1,483.1	2,497.1	1,810.6
Income (loss) before income taxes	135.2	(79.0)	72.4
Income tax expense (benefit)	115.9	(53.9)	97.3
Net income (loss)	$ 19.3	$ (25.1)	$ (24.9)

Year Ended December 31, 2016 compared to Year Ended December 31, 2015

Our Net income (loss) for the year ended December 31, 2016 changed $44.4 million from a loss of $25.1 million to income of $19.3 million due to lower Interest credited and other benefits to contract owners/policyholders, Net amortization of DAC and VOBA, Operating expenses and Other expense as well as higher Net investment income, partially offset by higher Total net realized capital losses, an unfavorable change in Income tax expense (benefit) and lower Fee income and Premiums.

Revenues

Total revenues decreased $799.8 million from $2,418.1 million to $1,618.3 million primarily due to higher Total net realized capital losses, lower Fee income and Premiums, partially offset by higher Net investment income.

Net investment income increased $57.0 million from $1,305.5 million to $1,362.5 million primarily due to growth in the general account assets driven by positive net flows, higher alternative investment income and higher prepayment fee income, partially offset by the impact of the continued low interest rate environment on reinvestment rates.

Fee income decreased $91.4 million from $718.7 million to $627.3 million primarily due to lower average separate account assets under management resulting from the continued runoff of our closed block of variable annuity business.

Premiums decreased $9.3 million from $505.8 million to $496.5 million primarily due to lower payout annuities with life contingencies, which corresponds to a decrease in Interest credited and other benefits to contract owners/policyholders.

Total net realized capital losses increased $753.3 million from $131.6 million to $884.9 million primarily due to an unfavorable change in annuity hedging derivatives of $1,011.9 million, partially offset by a favorable change in the fair value of embedded derivatives on product guarantees of $228.4 million. Under the variable annuity and fixed indexed annuity hedge programs, changes in equity markets and interest rates during the current period resulted in net unfavorable changes in equity, interest and foreign exchange derivatives from a net loss of $72.9 million in the prior period to a net loss of $1,084.8 million in the current period. A portion of these derivative losses were ceded to an affiliate under the combined coinsurance and coinsurance funds withheld agreement (from a gain of $54.5 million in the prior period to a loss of $1,023.3 million in the current period), and an offset was recorded to Interest credited and other benefits to contract owners/policyholders. See the *Related Party Transactions* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information on the combined coinsurance and coinsurance funds withheld agreement. The favorable change in the fair value of embedded derivatives on product guarantees from a gain of $95.8 million to a gain of $324.2 million was primarily due to favorable impacts resulting from annual assumptions updates and nonperformance risk, partially offset by unfavorable changes in implied volatility and from equity market movements. See *Critical Accounting Judgments and Estimates* for further detail on nonperformance risk.

Benefits and Expenses

Total benefits and expenses decreased $1,014.0 million from $2,497.1 million to $1,483.1 million primarily due to lower Interest credited and other benefits to contract owners/policyholders, Net amortization of DAC and VOBA, Operating expenses and Other expense.

Interest credited and other benefits to contract owners/policyholders decreased $733.0 million from $1,290.6 million to $557.6 million primarily due to the change in the amount of equity and interest rate derivative gains transferred under the combined coinsurance and coinsurance funds withheld agreement with an affiliate (the corresponding offsetting amount is reported in Total net realized capital losses), lower unfavorable impacts due to the annual assumptions updates and lower loss recognition on sales inducements. These decreases were partially offset by the change in the embedded derivative on the coinsurance funds withheld arrangements resulting from interest rate movements and the acceleration of deferred interest costs associated with early terminations of FHLB funding agreements.

Operating expenses decreased $23.2 million from $486.2 million to $463.0 million primarily due to lower commission expense on lower average separate account assets under management and the continued runoff of our closed block of variable annuity business.

Net amortization of DAC and VOBA decreased $244.0 million from $667.0 million to $423.0 million primarily due to favorable impacts from the annual assumption updates due to lower loss recognition in the current period. See *Critical Accounting Judgments and Estimates* for further detail on loss recognition on DAC and VOBA.

Other expense decreased $13.9 million from $25.1 million to $11.2 million primarily due to lower amortization of deferred reinsurance losses resulting from prospective assumption changes, and expenses incurred in the prior period related to the multi-year guaranteed fixed annuity contracts coinsurance agreement that did not reoccur in the current period due to the recapture of this agreement in the third quarter of 2015. See the *Related Party Transactions* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further detail on the recapture of the multi-year guaranteed fixed annuity contracts coinsurance agreement.

Income Taxes

Income tax expense (benefit) changed by $169.8 million from a benefit of $53.9 million to an expense of $115.9 million primarily due to a higher increase in the valuation allowance in the current period compared to the prior period, an increase in Income before income taxes and a decrease in the dividends received deduction.

Year Ended December 31, 2015 compared to Year Ended December 31, 2014

Our Net income (loss) for the year ended December 31, 2015 reflected a slightly higher loss than the prior period due to unfavorable changes in Net amortization of DAC and VOBA and decreases in Fee income and Premiums, mostly offset by favorable changes in Total net realized capital gains (losses), Income tax expense (benefit), Interest credited and other benefits to contract owners/policyholders and an increase in Net investment income.

Revenues

Total revenues increased $535.1 million from $1,883.0 million to $2,418.1 million primarily due to favorable changes in Total net realized capital gains (losses) and an increase in Net investment income, partially offset by decreases in Fee income and Premiums.

Net investment income increased $40.8 million from $1,264.7 million to $1,305.5 million primarily due to growth in the general account assets and higher prepayment income, partially offset by lower alternative investment income and the impact of the continued low interest rate environment on reinvestment rates.

Fee income decreased $106.1 million from $824.8 million to $718.7 million primarily due to lower average separate account assets under management resulting from the continued runoff of our closed block of variable annuity business.

Premiums decreased $32.0 million from $537.8 million to $505.8 million primarily due to lower payout annuities with life contingencies, which corresponds to a decrease in Interest credited and other benefits to contract owners/policyholders, partially offset by an increase in assumed premiums from an affiliate due to favorable persistency.

Total net realized capital losses decreased $642.5 million from $774.1 million to $131.6 million primarily due to favorable changes in the fair value of embedded derivatives on product guarantees, partially offset by unfavorable changes in annuity hedging and the fair value of fixed maturities using the fair value option. The favorable changes of $804.2 million in the fair value of embedded derivatives on variable annuity and fixed indexed annuity product guarantees (from a loss of $708.4 million in the prior period to a gain of $95.8 million in the current period) were due to favorable impacts resulting from interest rate movements and implied volatility, partially offset by unfavorable impacts resulting from equity market movements and nonperformance risk. Under the variable annuity and fixed indexed annuity hedge programs, changes in interest rates and equity markets during the year ended December 31, 2015 resulted in net unfavorable changes in equity, interest and foreign exchange derivatives of $69.2 million compared to prior period (losses of $72.9 million in the current period and losses of $3.7 million in the prior period). A portion of these derivative losses was ceded to SLDI under the combined coinsurance and coinsurance funds withheld agreement (gains of $54.5 million in the current period and losses of $50.0 million in the prior period) and an offset was recorded to Interest credited and other benefits to contract owners/policyholders. Unfavorable changes of $48.0 million in the fair value of fixed maturities using fair value option as a result of interest rate changes in the current period compared to the prior period also contributed to the change in Total net realized capital gains (losses).

Benefits and Expenses

Total benefits and expenses increased $686.5 million from $1,810.6 million to $2,497.1 million primarily due to unfavorable changes in Net amortization of DAC and VOBA, partially offset by favorable changes in Interest credited and other benefits to contract owners/policyholders.

Interest credited and other benefits to contract owners/policyholders decreased $101.3 million from $1,391.9 million to $1,290.6 million primarily due to net favorable changes in the embedded derivatives on the coinsurance funds withheld arrangements resulting from interest rate movements. This decrease was partially offset by the change in the amount of equity and interest rate derivative gains/losses transferred under the combined coinsurance and coinsurance funds withheld agreement with SLDI (the corresponding offsetting amount is reported in Total net realized capital gains (losses)), unfavorable impacts due to the annual assumptions review and loss recognition on sales inducements.

Net amortization of DAC and VOBA changed $783.0 million from a benefit of $116.0 million to an expense of $667.0 million primarily due to loss recognition on DAC and VOBA, unfavorable impacts due to the annual assumptions review in the current period compared to favorable unlocking in the prior period and higher amortization as a result of higher gross profits. See *Critical Accounting Judgments and Estimates* for further detail on loss recognition on DAC and VOBA.

Income Taxes

Income tax expense (benefit) changed by $151.2 million from an expense of $97.3 million to a benefit of $53.9 million primarily due to a lower increase in the valuation allowance in the current period compared to the prior period, a decrease in income before income taxes, and an increase in the dividends received deduction.

Financial Condition

Investments

Investment Strategy

Our investment strategy seeks to achieve sustainable risk-adjusted returns by focusing on principal preservation, disciplined matching of asset characteristics with liability requirements and the diversification of risks. Investment activities are undertaken according to investment policy statements that contain internally established guidelines and risk tolerances and are required to comply with applicable laws and insurance regulations. Risk tolerances are established for credit risk, credit spread risk, market risk, liquidity risk and concentration risk across issuers, sectors and asset types that seek to mitigate the impact of cash flow variability arising from these risks.

Segmented portfolios are established for groups of products with similar liability characteristics. Our investment portfolio consists largely of high quality fixed maturities and short-term investments, investments in commercial mortgage loans, alternative investments and other instruments, including a small amount of equity holdings. Fixed maturities include publicly issued corporate bonds, government bonds, privately placed notes and bonds, bonds issued by states and municipalities, Other asset-backed securities ("ABS"), and traditional Mortgage-backed securities ("MBS").

We use derivatives for hedging purposes to reduce our exposure to the cash flow variability of assets and liabilities, interest rate risk, credit risk and market risk. In addition, we use credit derivatives to replicate exposure to individual securities or pools of securities as a means of achieving credit exposure similar to bonds of the underlying issuer(s) more efficiently.

See the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K.

Portfolio Composition

The following table presents the investment portfolio as of the dates indicated:

	December 31, 2016		December 31, 2015	
($ in millions)	Carrying Value	% of Total	Carrying Value	% of Total
Fixed maturities, available-for-sale, excluding securities pledged	$ 21,873.8	75.6%	$ 22,458.4	76.9%
Fixed maturities, at fair value using the fair value option	647.5	2.2%	547.4	1.9%
Equity securities, available-for-sale	18.7	0.1%	19.2	0.1%
Short-term investments[1]	429.7	1.5%	1,069.4	3.7%
Mortgage loans on real estate	3,881.5	13.4%	3,310.9	11.3%
Policy loans	74.7	0.3%	79.8	0.3%
Limited partnerships/corporations	227.4	0.8%	186.3	0.6%
Derivatives	978.8	3.4%	799.4	2.7%
Other investments	18.6	0.1%	48.6	0.2%
Securities pledged	748.2	2.6%	672.4	2.3%
Total investments	$ 28,898.9	100.0%	$ 29,191.8	100.0%

[1] Short-term investments include investments with remaining maturities of one year or less, but greater than 3 months, at the time of purchase.

Fixed Maturities

Total fixed maturities by market sector, including securities pledged, were as presented below as of the dates indicated:

	December 31, 2016			
($ in millions)	**Amortized Cost**	**% of Total**	**Fair Value**	**% of Total**
Fixed maturities:				
U.S. Treasuries	$ 946.4	4.2%	$ 982.9	4.2%
U.S. Government agencies and authorities	29.4	0.1%	33.0	0.1%
State, municipalities and political subdivisions	500.1	2.2%	497.4	2.1%
U.S. corporate public securities	9,992.8	44.5%	10,444.7	44.9%
U.S. corporate private securities	2,753.6	12.2%	2,777.6	12.0%
Foreign corporate public securities and foreign governments[1]	2,620.2	11.7%	2,689.1	11.6%
Foreign corporate private securities[1]	2,734.6	12.2%	2,815.4	12.1%
Residential mortgage-backed securities	1,647.0	7.3%	1,749.7	7.5%
Commercial mortgage-backed securities	951.2	4.2%	957.1	4.1%
Other asset-backed securities	317.8	1.4%	322.6	1.4%
Total fixed maturities, including securities pledged	$ 22,493.1	100.0%	$ 23,269.5	100.0%

[1] Primarily U.S. dollar denominated.

	December 31, 2015			
($ in millions)	**Amortized Cost**	**% of Total**	**Fair Value**	**% of Total**
Fixed maturities:				
U.S. Treasuries	$ 992.7	4.3%	$ 1,058.7	4.5%
U.S. Government agencies and authorities	79.4	0.3%	81.9	0.3%
State, municipalities and political subdivisions	359.1	1.5%	360.5	1.5%
U.S. corporate public securities	10,718.9	46.1%	10,871.9	45.9%
U.S. corporate private securities	2,365.0	10.2%	2,394.4	10.1%
Foreign corporate public securities and foreign governments[1]	2,826.9	12.2%	2,793.0	11.8%
Foreign corporate private securities[1]	2,592.9	11.2%	2,626.0	11.1%
Residential mortgage-backed securities	1,746.8	7.5%	1,885.1	8.0%
Commercial mortgage-backed securities	1,311.0	5.6%	1,343.4	5.7%
Other asset-backed securities	257.6	1.1%	263.3	1.1%
Total fixed maturities, including securities pledged	$ 23,250.3	100.0%	$ 23,678.2	100.0%

[1] Primarily U.S. dollar denominated.

As of December 31, 2016, the average duration of our fixed maturities portfolio, including securities pledged, is between 6.5 and 7.0 years.

Fixed Maturities Credit Quality - Ratings

The Securities Valuation Office ("SVO") of the NAIC evaluates the fixed maturity security investments of insurers for regulatory reporting and capital assessment purposes and assigns securities to one of six credit quality categories called "NAIC designations." An internally developed rating is used as permitted by the NAIC if no rating is available. These designations are generally similar to the credit quality designations of the NAIC acceptable rating organizations ("ARO") for marketable fixed maturity securities, called rating agency designations except for certain structured securities as described below. NAIC designations of "1," highest quality and "2," high quality, include fixed maturity securities generally considered investment grade by such rating organizations. NAIC designations 3 through 6 include fixed maturity securities generally considered below investment grade by such rating organizations.

The NAIC designations for structured securities, including subprime and Alt-A RMBS, are based upon a comparison of the bond's amortized cost to the NAIC's loss expectation for each security. Securities where modeling results in no expected loss in each scenario are considered to have the highest designation of NAIC 1. A large percentage of our RMBS securities carry the NAIC 1 designation while the ARO rating indicates below investment grade. This is primarily due to the credit and intent impairments recorded by us that reduced the amortized cost on these securities to a level resulting in no expected loss in any scenario, which corresponds to the NAIC 1 designation. The methodology reduces regulatory reliance on rating agencies and allows for greater regulatory input into the assumptions used to estimate expected losses from such structured securities. In the tables below, we present the rating of structured securities based on ratings from the NAIC methodologies described above (which may not correspond to rating agency designations). NAIC designations (e.g., NAIC 1-6) are based on the NAIC methodologies.

As a result of time lags between the funding of investments, the finalization of legal documents and the completion of the SVO filing process, the fixed maturity portfolio generally includes securities that have not yet been rated by the SVO as of each balance sheet date, such as private placements. Pending receipt of SVO ratings, the categorization of these securities by NAIC designation is based on the expected ratings indicated by internal analysis.

Information about certain of our fixed maturity securities holdings by the NAIC designation is set forth in the following tables. Corresponding rating agency designation does not directly translate into NAIC designation, but represents our best estimate of comparable ratings from rating agencies, including Moody's, S&P and Fitch. If no rating is available from a rating agency, then an internally developed rating is used. As of December 31, 2016 and 2015, the weighted average NAIC quality rating of our fixed maturities portfolio was 1.5.

The fixed maturities in our portfolio are generally rated by external rating agencies and, if not externally rated, are rated by us on a basis similar to that used by the rating agencies. As of December 31, 2016 and 2015, the weighted average quality rating of our fixed maturities portfolio was A. Ratings are derived from three ARO ratings and are applied as follows, based on the number of agency ratings received:

- when three ratings are received then the middle rating is applied;
- when two ratings are received then the lower rating is applied;
- when a single rating is received, the ARO rating is applied; and
- when ratings are unavailable then an internal rating is applied.

The following tables present credit quality of fixed maturities, including securities pledged, using NAIC designations as of the dates indicated:

($ in millions)	December 31, 2016						
NAIC Quality Designation	**1**	**2**	**3**	**4**	**5**	**6**	**Total Fair Value**
U.S. Treasuries	$ 982.9	$ -	$ -	$ -	$ -	$ -	$ 982.9

Fixed maturities rated BB and below may have speculative characteristics and changes in economic conditions or other circumstances that are more likely to lead to a weakened capacity of the issuer to make principal and interest payments than is the case with higher rated fixed maturities.

Unrealized Capital Losses

Gross unrealized capital losses on fixed maturities, including securities pledged, decreased $263.6 million from $470.8 million to $207.2 million for the year ended December 31, 2016. The decrease in gross unrealized capital losses was primarily due to narrowing credit spreads. Gross unrealized losses on fixed maturities, including securities pledged, increased $377.4 million from $93.4 million to $470.8 million for the year ended December 31, 2015. The increase in gross unrealized capital losses was primarily due to rising interest rates and widening credit spreads.

As of December 31, 2016 and 2015 , we did not have any fixed maturities with an unrealized capital loss in excess of $10.0 million.

As of December 31, 2016 and 2015, we had $1.9 billion and $2.2 billion, fair value of energy sector fixed maturity securities, constituting 8.1% and 9.3%, of total fixed maturities portfolio, with gross unrealized capital losses of $20.5 million and $175.9 million, respectively. See the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information on unrealized capital losses.

Subprime and Alt-A Mortgage Exposure

Pre-2008 vintage subprime and Alt-A mortgage collateral continues to distance itself from the credit crisis and payment performance reflects a housing market firmly entrenched in recovery. While collateral losses continue to be realized, the pace and magnitude at which losses are being realized are steadily decreasing. Serious delinquencies and other measures of performance, like prepayments and loan defaults, have also displayed sustained periods of improvement. Reflecting these fundamental improvements, related bond prices and sector liquidity have increased substantially since the credit crisis. More broadly, home prices have moved steadily higher, further supporting bond payment performance. Year-over-year home price measures, while at a lower magnitude than experienced in the years following the trough in home prices, appear to have stabilized at sustainable levels, when measured on a nationwide basis. This backdrop remains supportive of continued improvement in overall borrower payment behavior. Reflecting these fundamental improvements, related bond prices and sector liquidity have increased substantially since the credit crisis. In managing our risk exposure to subprime and Alt-A mortgages, we take into account collateral performance and structural characteristics associated with our various positions.

We do not originate or purchase subprime or Alt-A whole-loan mortgages. Subprime lending is the origination of loans to customers with weaker credit profiles. We define Alt-A mortgages to include the following: residential mortgage loans to customers who have strong credit profiles but lack some element(s), such as documentation to substantiate income; residential mortgage loans to borrowers that would otherwise be classified as prime but for which loan structure provides repayment options to the borrower that increase the risk of default; and any securities backed by residential mortgage collateral not clearly identifiable as prime or subprime.

We have exposure to RMBS, CMBS and ABS. Our exposure to subprime mortgage-backed securities is primarily in the form of ABS structures collateralized by subprime residential mortgages and the majority of these holdings were included in Other ABS under "Fixed Maturities" above. As of December 31, 2016, the fair value, amortized cost, and gross unrealized losses related to our exposure to subprime mortgage-backed securities totaled $56.5 million, $53.7 million and $2.5 million, respectively, representing 0.2% of total fixed maturities, including securities pledged, based on fair value. As of December 31, 2015, the fair value, amortized cost, and gross unrealized losses related to our exposure to subprime mortgage-backed securities totaled $118.9 million, $116.3 million and $5.6 million, respectively, representing 0.5% of total fixed maturities, including securities pledged, based on fair value.

The following table presents our exposure to subprime mortgage-backed securities by credit quality using NAIC designations, ARO ratings and vintage year as of the dates indicated:

	% of Total Subprime Mortgage-backed Securities

Our exposure to Alt-A mortgages is included in the "RMBS" line item in the "Fixed Maturities" table under "Fixed Maturities" above. As of December 31, 2016, the fair value, amortized cost and gross unrealized losses related to our exposure to Alt-A RMBS totaled $57.9 million, $50.2 million and $1.6 million, respectively, representing 0.2% of total fixed maturities, including securities pledged, based on fair value. As of December 31, 2015, the fair value, amortized cost, and gross unrealized losses related to our exposure to Alt-A RMBS totaled $87.0 million, $76.0 million and $1.5 million, respectively, representing 0.4% of total fixed maturities, including securities pledged, based on fair value.

The following table presents our exposure to Alt-A RMBS by credit quality using NAIC designations, ARO ratings and vintage year as of the dates indicated:

Commercial Mortgage-backed and Other Asset-backed Securities

CMBS investments represent pools of commercial mortgages that are broadly diversified across property types and geographical areas. Delinquency rates on commercial mortgages increased over the course of 2009 through mid-2012. Since then, the steep pace of increases observed in the early years following the credit crisis has ceased, and the percentage of delinquent loans declined through February 2016 (although certain months did post marginal increases). Since then, the delinquency rate has increased slowly. Other performance metrics like vacancies, property values and rent levels have posted sustained improvement trends, although these metrics are not observed uniformly, differing by dimensions such as geographic location and property type. These improvements have been buoyed by some of the same macro-economic tailwinds alluded to in regards to our subprime and Alt-A mortgage exposure. A robust environment for property refinancing was particularly supportive of improving credit performance metrics throughout much of the post-credit crisis period. In the first quarter of 2016, however, this virtuous lending cycle was disrupted as the dislocation in corporate credit markets negatively impacted liquidity conditions in CMBS. As a result, the new issuance market for CMBS slowed considerably during the first half of this year. This dynamic, should it resurface, is a risk for the overall performance health of the sectors and is being monitored closely for potential negative impacts. Spread performance in the first half of 2016 was volatile, although signs of increased liquidity and more general stability in credit spreads was observed over the course of the third quarter and into year end.

For non-student loan consumer ABS, delinquency and loss rates have been maintained at levels considered low by historical standards and indicative of high credit quality. Relative strength in various credit metrics across multiple types of asset-backed loans have been observed on a sustained basis.

The following table presents our exposure to CMBS holdings by credit quality using NAIC designations, ARO ratings and vintage year as of the dates indicated:

As of December 31, 2016, the fair value, amortized cost and gross unrealized loss related to our exposure to Other ABS, excluding subprime exposure, totaled $267.6 million,$265.1 million, and $0.5 million respectively. As of December 31, 2015, the fair value and amortized cost of our exposure to Other ABS, excluding subprime exposure, totaled $147.0 million and $142.8 million, respectively. There were no gross unrealized losses related to Other ABS.

As of December 31, 2016, Other ABS was broadly diversified both by type and issuer with credit card receivables and nonconsolidated collateralized loan obligations ("CLOs") comprising 15.3% and 53.9%, respectively, of total Other ABS, excluding

subprime exposure. There were no automobile receivables related to Other ABS. As of December 31, 2015, Other ABS was broadly diversified both by type and issuer with credit card receivables comprising 55.3% of total Other ABS, excluding subprime exposure. There were no automobile receivables and nonconsolidated collateralized loan obligations ("CLOs") related to Other ABS.

The following table presents our exposure to Other ABS holdings, excluding subprime exposure, by credit quality using NAIC designations, ARO ratings and vintage year as of the dates indicated:

Mortgage Loans on Real Estate

We rate commercial mortgages to quantify the level of risk. We place those loans with higher risk on a watch list and closely monitor these loans for collateral deficiency or other credit events that may lead to a potential loss of principal and/or interest. If we determine the value of any mortgage loan to be OTTI (i.e., when it is probable that we will be unable to collect on amounts due according to the contractual terms of the loan agreement), the carrying value of the mortgage loan is reduced to either the present value of expected cash flows from the loan, discounted at the loan's effective interest rate, or fair value of the collateral. For those mortgages that are determined to require foreclosure, the carrying value is reduced to the fair value of the underlying collateral, net of estimated costs to obtain and sell at the point of foreclosure. The carrying value of the impaired loans is reduced by establishing an other-than-temporary write-down recorded in Net realized capital gains (losses) in the Statements of Operations.

Loan-to-value ("LTV") and debt service coverage ("DSC") ratios are measures commonly used to assess the risk and quality of commercial mortgage loans. The LTV ratio, calculated at time of origination, is expressed as a percentage of the amount of the loan relative to the value of the underlying property. An LTV ratio in excess of 100% indicates the unpaid loan amount exceeds the value of the underlying collateral. The DSC ratio, based upon the most recently received financial statements, is expressed as a percentage of the amount of a property's Net income (loss) to its debt service payments. A DSC ratio of less than 1.0 indicates that property's operations do not generate sufficient income to cover debt payments. These ratios are utilized as part of the review process described above.

As of December 31, 2016 and 2015, our mortgage loans on real estate portfolio had a weighted average DSC of 2.2 times, and a weighted average LTV ratio of 61.1% and 60.4%, respectively. See the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information on mortgage loans on real estate.

Other-Than-Temporary Impairments

We evaluate available-for-sale fixed maturities and equity securities for impairment on a regular basis. The assessment of whether impairments have occurred is based on a case-by-case evaluation of the underlying reasons for the decline in estimated fair value. See the *Business, Basis of Presentation and Significant Accounting Policies* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for the policy used to evaluate whether the investments are other-than-temporarily impaired.

For the year ended December 31, 2016, we recorded $5.3 million of credit related OTTI of which the primary contributor was $1.5 million of write-downs recorded in the Foreign Private sector. For the year ended December 31, 2016, we recorded $4.7 million of intent related OTTI, which were primarily related to the intent to sell positions in energy sector public corporate credits either because of a commitment to sell or an expectation that we may be required to sell as a result of our investment guidelines. See the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for further information on OTTI.

European Exposures

We closely monitor our exposures to European sovereign debt in general, with a primary focus on the sovereign debt of Greece, Ireland, Italy, Portugal and Spain (which we refer to as "peripheral Europe"), as these countries have applied for support from the European Financial Stability Facility or received support from the European Central Bank via government bond purchases in the secondary market.

The financial turmoil in Europe continues to be a potential threat to global capital markets and remains a challenge to global financial stability. Additionally, the possibility of capital market volatility spreading through a highly integrated and interdependent banking system remains. Despite signs of continuous improvement in the region, it is our view that the risk among European sovereigns and financial institutions still warrants scrutiny, in addition to our customary surveillance and risk monitoring, given how highly correlated these sectors of the region have become.

The United States and European Union continue to maintain sanctions against select Russian businesses in response to the ongoing conflict in eastern Ukraine. We remain comfortable with our aggregate Russian exposure of $41.2 million, given its relatively small allocation in our total investment portfolio.

We quantify and allocate our exposure to the region, as described in the table below, by attempting to identify aspects of the region or country risk to which we are exposed. Among the factors we consider are the nationality of the issuer, the nationality of the issuer's ultimate parent, the corporate and economic relationship between the issuer and its parent, as well as the political, legal and economic environment in which each functions. By undertaking this assessment, we believe that we develop a more accurate assessment of the actual geographic risk, with a more integrated understanding of contributing factors to the full risk profile of the issuer.

In the normal course of our ongoing risk and portfolio management process, we closely monitor compliance with a credit limit hierarchy designed to minimize overly concentrated risk exposures by geography, sector and issuer. This framework takes into account various factors such as internal and external ratings, capital efficiency and liquidity and is overseen by a combination of Investment and Corporate Risk Management, as well as insurance portfolio managers focused specifically on managing the investment risk embedded in our portfolio.

The following table presents our European exposures, for selected countries based on risk, at fair value and amortized cost as of December 31, 2016:

Selected Countries Fixed Maturities and Equity Securities

($ in millions)	Sovereign	Financial Institutions	Non-Financial Institutions	Total (Fair Value)	Total (Amortized Cost)
Ireland	$ -	$ -	$ 57.9 [1]	$ 57.9 [1]	$ 53.6
Italy	-	-	64.5	64.5	61.7
Spain	-	-	69.5	69.5	64.0
Total Peripheral Europe	$ -	$ -	$ 191.9	$ 191.9	$ 179.3

[1] Includes $0.4 million derivative assets.

We did not have any exposure to Greece or Portugal. Among the remaining $2.8 billion of total non-peripheral European exposure, we had a portfolio of credit-related assets similarly diversified by country and sector across developed and developing Europe. As of December 31, 2016, our sovereign exposure was $79.5 million, which consisted of fixed maturities. We also had $441.6 million in net exposure to non-peripheral financial institutions with a concentration in France of $87.1 million, The Netherlands of $78.3 million, Switzerland of $117.2 million and the United Kingdom of $128.5 million. The balance of $2.2 billion was invested across non-peripheral, non-financial institutions.

In addition to aggregate concentration in the United Kingdom of $1,052.1 million, we had significant non-peripheral European total country exposures in The Netherlands of $396.6 million, in France of $303.5 million, in Germany of $261.2 million and in Switzerland of $285.7 million. We place additional scrutiny on our financial exposure in the United Kingdom, France, Switzerland and The Netherlands given our concern for the potential for volatility to spread through the European banking system. We believe the primary risk results from market value fluctuations resulting from spread volatility and the secondary risk is default risk, dependent upon the strength of the recovery of economic conditions in Europe.

Liquidity and Capital Resources

Liquidity is our ability to generate sufficient cash flows to meet the cash requirements of operating, investing and financing activities. Capital refers to our long-term financial resources available to support the business operations and contribute to future growth. Our ability to generate and maintain sufficient liquidity and capital depends on the profitability of the businesses, timing of cash flows on investments and products, general economic conditions and access to the capital markets and the alternate sources of liquidity and capital described herein.

Liquidity Management

Our principal available sources of liquidity are annuity product charges, funding agreements and fixed annuity deposits, investment income, proceeds from the maturity and sale of investments, proceeds from debt issuance and borrowing facilities, repurchase agreements, securities lending, reinsurance and capital contributions. Primary uses of these funds are payments of commissions and operating expenses, interest and premium credits, payments under guaranteed death and living benefits, investment purchases, repayment of debt and contract maturities, withdrawals and surrenders and payment of dividends.

Our liquidity position is managed by maintaining adequate levels of liquid assets, such as cash, cash equivalents and short-term investments. As part of the liquidity management process, different scenarios are modeled to determine whether existing assets are adequate to meet projected cash flows. Key variables in the modeling process include interest rates, equity market movements, quantity and type of interest and equity market hedges, anticipated contract owner behavior, market value of the general account assets, variable separate account performance and implications of rating agency actions.

The fixed account liabilities are supported by a general account portfolio, principally composed of fixed rate investments with matching duration characteristics that can generate predictable, steady rates of return. The portfolio management strategy for the fixed account considers the assets available-for-sale.This strategy enables us to respond to changes in market interest rates, prepayment risk, relative values of asset sectors and individual securities and loans, credit quality outlook and other relevant factors. The objective of portfolio management is to maximize returns, taking into account interest rate and credit risk, as well as other risks. Our asset/liability management discipline includes strategies to minimize exposure to loss as interest rates and economic and market conditions change. In executing this strategy, we use derivative instruments to manage these risks. Our derivative counterparties are of high credit quality.

Liquidity and Capital Resources

Additional sources of liquidity include borrowing facilities to meet short-term cash requirements that arise in the ordinary course of business. We maintain the following agreements:

- A reciprocal loan agreement with Voya Financial, Inc., an affiliate, whereby either party can borrow from the other up to 3.0% of our statutory net admitted assets, excluding Separate Accounts, as of the preceding December 31. As of December 31, 2016 and 2015, we did not have any outstanding receivable/payable with Voya Financial, Inc. under the reciprocal loan agreement. We and Voya Financial, Inc. continue to maintain the reciprocal loan agreement and future borrowings by either party will be subject to the reciprocal loan terms summarized above. Effective January 2014, interest on any borrowing by either us or Voya Financial, Inc. is charged at a rate based on the prevailing market rate for similar third-party borrowings or securities.

- We hold approximately 45.4% of our assets in marketable securities. These assets include cash, U.S. Treasuries, Agencies, Corporate Bonds, ABS, CMBS and collateralized mortgage obligations ("CMO") and Equity securities. In the event of a temporary liquidity need, cash may be raised by entering into repurchase agreements, dollar rolls and/or security lending agreements by temporarily lending securities and receiving cash collateral. Under our Liquidity Plan, up to 12% of our general account statutory admitted assets may be allocated to repurchase, dollar roll and securities lending programs. At the time a temporary cash need arises, the actual percentage of admitted assets available for repurchase transactions will depend upon outstanding allocations to the three programs. As of December 31, 2016 and 2015, we had securities lending obligations of $111.0 million and $153.6 million respectively, which, for both years, represents approximately 0.2% of our general account statutory admitted assets.

Management believes that our sources of liquidity are adequate to meet our short-term cash obligations.

Capital Contributions and Dividends

During the years ended December 31, 2016 and 2015, we did not receive any capital contributions from our Parent.

During the year ended December 31, 2016, we declared an ordinary dividend to our parent in the amount of $373.0 million, which was paid to our Parent on June 27, 2016. During the year ended December 31, 2015, we paid an ordinary dividend in the amount of $394.0 million to our Parent.

During the year ended December 31, 2015, we declared and paid an extraordinary distribution in the amount of $98.0 million to our parent.

Collateral

Under the terms of our Over-The-Counter ("OTC") Derivative International Swaps and Derivatives Association, Inc. ("ISDA") agreements, we may receive from, or deliver to, counterparties collateral to assure that all terms of the ISDA agreements will be met with regard to the Credit Support Annex ("CSA"). The terms of the CSA call for us to pay interest on any cash received equal to the Federal Funds rate. To the extent cash collateral is received and delivered, it is included in Payables under securities loan agreements, including collateral held and Short-term investments under securities loan agreements, including collateral delivered, respectively, on the Balance Sheets and is reinvested in short-term investments. Collateral held is used in accordance with the CSA to satisfy any obligations. Investment grade bonds owned by us are the source of non-cash collateral posted, which is reported in Securities pledged on the Balance Sheets. As of December 31, 2016, we held $654.8 million and $23.0 million of net cash collateral related to OTC derivative contracts and cleared derivative contracts, respectively. As of December 31, 2015, we held $423.0 million and $0.4 million of net cash collateral related to OTC derivative contracts and cleared derivative contracts, respectively. In addition, as of December 31, 2016, we delivered $477.3 million of securities and held $52.1 million of securities as collateral. As of December 31, 2015, we delivered $524.5 million of securities and held $12.9 million of securities as collateral.

Reinsurance Agreements

Reinsurance Ceded

As of December 31, 2016 and 2015, total reserves ceded to affiliates were $6.8 billion and $5.0 billion, respectively. For the years ended December 31, 2016, 2015 and 2014, premiums ceded to affiliates were $670.2 million, $404.5 million and $502.5 million, respectively.

Waiver of Premium - Coinsurance Funds Withheld

Effective October 1, 2010, we entered into a coinsurance funds withheld agreement with an affiliate, SLDI. Under the terms of the agreement, we ceded to SLDI 100% of the group life waiver of premium liability (except for groups covered under rate credit agreements) assumed from ReliaStar Life Insurance Company ("RLI"), an affiliate, related to the Group Annual Term Coinsurance Funds Withheld agreement between us and RLI described under "Reinsurance Assumed" below.

As of December 31, 2016 and 2015, the value of the funds withheld liability under this agreement was $154.9 million and $170.6 million, respectively, which is included in Funds held under reinsurance treaties with affiliates on the Balance Sheets. In addition, as of December 31, 2016 and 2015, we had an embedded derivative under this agreement with a value of $(2.1) million and $(5.6) million, respectively, which is recorded in Funds held under reinsurance treaties with affiliates on the Balance Sheets. As of December 31, 2016 and 2015, reserves ceded under this agreement were $183.9 million and $203.6 million, respectively.

Guaranteed Living Benefit - Coinsurance and Coinsurance Funds Withheld

Prior to July 1, 2016, we had an amended and restated automatic reinsurance agreement with an affiliate, SLDI, on a combined coinsurance and coinsurance funds withheld basis, covering 100% of the benefits guaranteed under specific variable annuity guaranteed living benefit riders attached to certain variable annuity contracts issued by us on or after January 1, 2000. Also, prior to July 1, 2016, we had a services agreement with SLDI, under which we provided certain actuarial risk modeling consulting services to SLDI with respect to hedge positions undertaken by SLDI in connection with the reinsurance agreement. Additionally, prior to July 1, 2016, we and SLDI had an asset management services agreement, under which SLDI served as asset manager for the funds withheld account. SLDI retained its affiliate, VIM, as Sub-advisor for the funds withheld account.

Effective July 1, 2016, SLDI acquired Roaring River II, Inc. ("RRII"), a Missouri life reinsurance captive, from its affiliate, RLI, and also effective July 1, 2016, RRII redomesticated from the State of Missouri to the State of Arizona. Effective July 1, 2016, we, SLDI and RRII entered into release, consent and novation agreements pursuant to which RRII assumed the variable annuity guaranteed living benefits previously reinsured to SLDI under the automatic reinsurance agreement; the services agreement from SLDI under which the we provide certain actuarial risk modeling consulting services to SLDI with respect to hedge positions undertaken by SLDI in connection with the automatic reinsurance agreement; and SLDI's obligation to serve as asset manager for the funds withheld account under the asset management services agreement.

For the years ended December 31, 2016, 2015 and 2014, revenue related to the aforementioned services agreement was $9.6 million, $10.9 million, and $12.3 million, respectively.

The impacts of these agreements on the Balance Sheets as of the dates indicated are as follows:

	December 31,	
($ in millions)	2016	2015
Assets on deposit in trust	$ 6,504.5	$ 6,632.1
Funds withheld liability[1]	6,356.8	6,616.3
Embedded derivative[1]	147.6	15.8
Reserves ceded[2]	6,545.9	4,795.7
Deferred loss[3]	269.1	283.3

[1] Included in Funds held under reinsurance treaties with affiliates on the Balance Sheets.
[2] Included in Deposits, premiums receivable and reinsurance recoverable on the Balance Sheets.
[3] Included in Other assets on the Balance Sheets.

Multi-year Guaranteed Fixed Annuity - Coinsurance

Effective May 1, 2005, we entered into a coinsurance agreement with our affiliate, Security Life of Denver Insurance Company ("SLD"). Under the terms of the agreement, SLD assumed and accepted the responsibility for paying, when due, 100% of the liabilities arising under the multi-year guaranteed fixed annuity contracts issued by us between January 1, 2001 and December 31, 2003. In addition, we assigned SLD all future premiums received by us attributable to the ceding contracts.

Under the terms of the agreement, the Company ceded $2.5 billion in account balances and transferred a ceding commission and $2.7 billion in assets to SLD, resulting in a realized capital gain of $47.9 million to the Company, which reduced the ceding commission.

The coinsurance agreement was accounted for using the deposit method. As such, $2.7 billion of Deposit receivable from affiliate was established on the Balance Sheets. On September 25, 2015, we recaptured, via a commutation agreement, the multi-year guaranteed fixed annuity contracts ceded under the coinsurance agreement. Under the terms of the agreement, which was effective July 1, 2015, the Company received net assets in the amount of $618.7 million in satisfaction of the deposit receivable balance and recognized a pre-tax loss of $4.2 million. We incurred amortization expense of the negative ceding commission of $3.2 million and $6.6 million for the years ended December 31, 2015 and 2014, respectively, which is recorded in Other expense in the Statements of Operations.

Universal Life - Coinsurance

Effective January 1, 2000, we entered into a 100% coinsurance agreement with our affiliate, SLD, covering certain universal life policies which had been issued and in force as of, as well as any such policies issued after, the effective date of the agreement. As of December 31, 2016 and 2015, reserves ceded by us under this agreement were $21.0 million and $20.6 million, respectively.

Guaranteed Investment Contract - Coinsurance

Effective August 20, 1999, we entered into a Facultative Coinsurance Agreement with an affiliate, SLD. Under the terms of the agreement, we facultatively cede, from time to time, certain guaranteed investment contracts and funding agreements to SLD on a 100% coinsurance basis. We utilize this reinsurance facility primarily for diversification and asset-liability management purposes in connection with this business. The coinsurance agreement is accounted for using the deposit method.

Our senior management has established a current maximum of $4.0 billion for guaranteed investment contracts and funding agreements reserves covered under this agreement. As of December 31, 2016 and 2015 the deposit receivable was $157.8 million and $155.3 million, respectively.

Reinsurance Assumed

As of December 31, 2016 and 2015, total reserves assumed from affiliates were $418.7 million and $438.7 million, respectively. For the years ended December 31, 2016, 2015 and 2014, premiums assumed from affiliates were $436.1 million, $428.5 million and $407.7 million, respectively.

Level Premium Term Life Insurance - Stop-loss

Effective January 1, 2012, we entered into a stop-loss agreement with RLI, which was amended and restated April 1, 2012, under which we agreed to indemnify RLI, and RLI agreed to reinsure with us, the aggregate mortality risk under the combined blocks of level premium term life insurance policies issued by RLI between January 1, 2009 and December 31, 2009 and also between January 1, 2012 and December 31, 2012. This coverage included certain level premium term life insurance policies assumed by RLI from RLNY under an Automatic Coinsurance Agreement effective March 1, 2008. Under the terms of the agreement, we will make benefit payments to RLI equal to the amount of claims in excess of the attachment point (equal to a percentage of net reinsurance premium) up to the maximum fully covered benefit. The stop-loss agreement is accounted for using the deposit method. A fee receivable from affiliate of $0.4 million as of December 31, 2016 and 2015 is included in Other liabilities on the Balance Sheets. The fee is accrued and subsequently settled in cash each quarterly accounting period.

Group Annual Term - Coinsurance Funds Withheld

Effective December 31, 2008, we entered into a coinsurance funds withheld agreement with RLI for an indefinite duration. Under the terms of the agreement, we assumed 100% quota share of RLI's net retained liability under certain Employee Benefits Group Annual Term policies, including disability waiver of premium.

The initial premium of $219.9 million was equal to the aggregate reserve assumed by us. Thereafter, premiums are equal to the total earned gross premiums collected by RLI from policyholders. RLI will retain all reinsurance premiums payable to us as funds withheld, as security for ceded liabilities and against which ceded losses will be offset. Monthly, we will receive or pay a net settlement. This agreement was amended and restated on October 1, 2010 to better reflect the current investment environment and to modify the treatment of claims under certain policies under which claims are not paid in the form of a single lump sum; the underlying terms described above remained unchanged. (Please see also description of "Waiver of Premium Coinsurance Funds Withheld" agreement between us and SLDI under "Reinsurance Ceded" above). As of December 31, 2016 and 2015, reserves assumed by us under this agreement were $418.7 million and $438.7 million, respectively.

As of December 31, 2016 and 2015, the value of the funds withheld by ceding companies under this agreement was $437.4 million and $464.8 million, respectively, which is included in Deposits, premiums receivable and reinsurance recoverable on the Balance Sheets. In addition, as of December 31, 2016 and 2015, we had an embedded derivative under this agreement with a value of $(5.9) million and $(15.6) million, respectively.

Separate Accounts

Separate account assets and liabilities generally represent funds maintained to meet specific investment objectives of contract owners or participants who bear the investment risk, subject, in limited cases, to certain minimum guaranteed rates. Investment income and investment gains and losses generally accrue directly to such contract owners. The assets of each account are legally segregated and are not subject to claims that arise out of any other business of the Company.

Separate account assets supporting variable options under variable annuity contracts are invested, as designated by the contract owner or participant under a contract, in shares of mutual funds that are managed by the Company, or in other selected mutual funds not managed by us or our affiliates.

The Company reports separately, as assets and liabilities, investments held in separate accounts and liabilities of separate accounts if:

- Such separate accounts are legally recognized;
- Assets supporting the contract liabilities are legally insulated from the Company's general account liabilities;

- Investments are directed by the contract owner or participant; and
- All investment performance, net of contract fees and assessments, is passed through to the contract owner.

The Company reports separate account assets that meet the above criteria at fair value on the Balance Sheets based on the fair value of the underlying investments. Separate account liabilities equal separate account assets. Investment income and net realized and unrealized capital gains (losses) of the separate accounts, however, are not reflected in the Statements of Operations, and the Statements of Cash Flows do not reflect investment activity of the separate accounts.

FHLB

We are currently a member of the FHLB of Des Moines and are required to pledge collateral to back any funding agreements issued to the FHLB. We have the ability to obtain funding from the FHLB based on a percentage of the value of our assets and subject to the availability of eligible collateral. The program capacity is limited to 20% of the total assets of our general and separate accounts. Furthermore, collateral is pledged based on the outstanding balances of the FHLB funding agreement. The amount varies based on type, rating and maturity of the collateral posted to the FHLB. Generally, mortgage securities, commercial real estate and U.S. treasury securities are pledged to the FHLB. Market value fluctuations resulting from changes in interest rates, spreads and other risk factors for each type of assets are monitored and additional collateral is either pledged or released as needed.

Our maximum borrowing capacity under this credit facility was $13.0 billion as of December 31, 2016 and 2015 and does not have an expiration date as long as we maintain a satisfactory level of creditworthiness based on the FHLB credit assessment. As of December 31, 2016 and 2015, we had $200.1 million and $950.4 million, respectively, in non-putable funding agreements, including accrued interest, issued to the FHLB. These non-putable funding agreements are included in Future policy benefits and contract owner account balances on the Balance Sheets. As of December 31, 2016 and 2015, assets with a market value of $235.7 million and $1,096.0 million, respectively, collateralized the funding agreements to the FHLB.

Ratings

Our access to funding and our related cost of borrowing, requirements for derivatives collateral posting and the attractiveness of certain of our products to customers are affected by our credit ratings and insurance financial strength ratings, which are periodically reviewed by the rating agencies. Financial strength ratings and credit ratings are important factors affecting public confidence in an insurer and its competitive position in marketing products. The credit ratings are also important for the ability to raise capital through the issuance of debt and for the cost of such financing.

A downgrade in our credit or financial strength ratings or the credit or financial strength ratings of our Parent or rated affiliates could potentially, among other things, limit our ability to market products, reduce our competitiveness, increase the number or value of policy surrenders and withdrawals, increase our borrowing costs and potentially make it more difficult to borrow funds, adversely affect the availability of financial guarantees or LOCs, cause additional collateral requirements or other required payments under certain agreements, allow counterparties to terminate derivative agreements and/or impair our relationships with creditors, distributors or trading counterparties thereby potentially negatively affecting our profitability, liquidity and/or capital. In addition, we consider nonperformance risk in determining the fair value of our liabilities. Therefore, changes in our credit or financial strength ratings or the credit or financial strength ratings of our Parent or rated affiliates may affect the fair value of our liabilities.

Financial strength ratings represent the opinions of rating agencies regarding the financial ability of an insurance company to meet its obligations under an insurance policy. Credit ratings represent the opinions of rating agencies regarding an entity's ability to repay its indebtedness. These ratings are not a recommendation to buy or hold any of our securities and they may be revised or revoked at any time at the sole discretion of the rating organization.

Our financial strength and credit ratings as of the date of this Annual Report on Form 10-K are summarized in the following table. In parentheses, following the initial occurrence in the table of each rating, is an indication of that rating's relative rank within the agency's rating categories. That ranking refers only to the generic or major rating category and not to the modifiers appended to the rating by the rating agencies to denote relative position within such generic or major category. For each rating, the relative position of the rating within the relevant rating agency's ratings scale is presented, with "1" representing the highest rating in the scale.

Company	A.M. Best	Fitch	Moody's	S&P
Voya Insurance and Annuity Company				
Financial Strength Rating	A (3 of 16)	A (3 of 9)	A2 (3 of 9)	A (3 of 9)

Rating Agency	Financial Strength Rating Scale
A.M. Best[1]	"A++" to "S"
Fitch[2]	"AAA" to "C"
Moody's[3]	"Aaa" to "C"
S&P[4]	"AAA" to "R"

(1) A.M. Best's financial strength rating is an independent opinion of an insurer's financial strength and ability to meet its ongoing insurance policy and contract obligations. It is based on a comprehensive quantitative and qualitative evaluation of a company's balance sheet strength, operating performance and business profile.

(2) Fitch's financial strength ratings provide an assessment of the financial strength of an insurance organization. The National Insurer Financial Strength ("IFS") Rating is assigned to the insurance company's policyholder obligations, including assumed reinsurance obligations and contract holder obligations, such as funding agreements.

(3) Moody's financial strength ratings are opinions of the ability of insurance companies to repay punctually senior policyholder claims and obligations. Moody's appends numerical modifiers 1, 2 and 3 to each generic rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

(4) S&P's insurer financial strength rating is a forward-looking opinion about the financial security characteristics of an insurance organization with respect to its ability to pay under its insurance policies and contracts in accordance with their terms. A "+" or "-" indicates relative strength within a category.

Our ratings by A.M. Best Company, Inc. ("A.M. Best"), Fitch, Moody's and S&P reflect a broader view of how the financial services industry is being challenged by the current economic environment, but also are based on the rating agencies' specific views of our financial strength. In making their ratings decisions, the agencies consider past and expected future capital and earnings, asset quality and risk, profitability and risk of existing liabilities and current products, market share and product distribution capabilities and direct or implied support from parent companies.

Rating agencies use an "outlook" statement for both industry sectors and individual companies. For an industry sector, a stable outlook generally implies that over the next 12 to 18 months the rating agency expects ratings to remain unchanged among companies in the sector. On November 15, 2016, Moody's revised its outlook for the US life insurance industry to negative from stable. The outlook change reflects Moody's expectation for fundamental business conditions in the industry over the next 12 to 18 months including increasing pressures on life insurers' profits, due to low interest rates, coupled with key shifts in their regulatory and business environments. For a particular company, an outlook generally indicates a medium- or long-term trend in credit fundamentals, which if continued, may lead to a rating change.

Ratings actions affirmation and outlook changes by S&P, Moody's, Fitch and A.M. Best from December 31, 2015 through December 31, 2016 and subsequently through the date of this Annual Report on Form 10-K are as follows:

- On November 17, 2016, A.M. Best affirmed the financial strength rating of A of the key life insurance entities of Voya Financial, Inc., including us, with a Stable outlook. Concurrently, A.M. Best upgraded Voya's Long-Term Issuer Credit Rating to bbb+ from bbb as well as its Senior Unsecured Debt rating. Voya Financial, Inc.'s junior subordinated debt rating was also upgraded to bbb- from bb+. The outlook of these Credit Ratings were revised to Stable from Positive.

- On September 20, 2016, Fitch affirmed Voya Financial, Inc.'s long-term issuer credit rating, senior debt ratings and junior subordinated debt rating. Fitch also affirmed the financial strength ratings of the U.S. operating entities, including us. The rating outlook for all ratings is Stable.
- On June 29, 2016, S&P affirmed Voya Financial, Inc.'s long-term issuer credit and senior debt ratings at "BBB" and its junior subordinated debt rating at 'BB+'. The financial strength ratings of the U.S. operating entities, including us, were also affirmed at "A". The rating outlook for all ratings is Stable.
- On April 8, 2016, Fitch affirmed Voya's long-term issuer credit rating at 'BBB+', its senior debt rating at 'BBB' and its junior subordinated debt rating at 'BB+'. The financial strength ratings of the U.S. operating entities, including us, were also affirmed at "A". The rating outlook for all ratings is Stable.

Other Insurance Products

Historically, we provided interest-sensitive, traditional life insurance and health insurance products. All health insurance has been ceded to other insurers and new policies are no longer written. We ceased the issuance of life insurance policies in 2001, and all life insurance business is currently in run-off. A certain portion of the assets held in the general account are dedicated to funding this block of business.

Derivatives

Our use of derivatives is limited mainly to economic hedging to reduce our exposure to cash flow variability of assets and liabilities, interest rate risk, credit risk, exchange rate risk and market risk. It is our policy not to offset amounts recognized for derivative instruments and amounts recognized for the right to reclaim cash collateral or the obligation to return cash collateral arising from derivative instruments executed with the same counterparty under a master netting arrangement.

We enter into interest rate, equity market, credit default and currency contracts, including swaps, futures, forwards, caps, floors and options, to reduce and manage various risks associated with changes in value, yield, price, cash flow, or exchange rates of assets or liabilities held or intended to be held, or to assume or reduce credit exposure associated with a referenced asset, index, or pool. We also utilize options and futures on equity indices to reduce and manage risks associated with our annuity products. Open derivative contracts are reported as Derivatives assets or liabilities on the Balance Sheets at fair value. Changes in the fair value of derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations.

We also have investments in certain fixed maturities and have issued certain annuity products that contain embedded derivatives for which fair value is at least partially determined by levels of or changes in domestic and/or foreign interest rates (short-term or long-term), exchange rates, prepayment rates, equity markets, or credit ratings/spreads. Embedded derivatives within fixed maturities are included with the host contract on the Balance Sheets and changes in fair value of the embedded derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations. Embedded derivatives within certain annuity products are included in Future policy benefits and contract owner account balances on the Balance Sheets and changes in the fair value of the embedded derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations.

In addition, we have entered into coinsurance with funds withheld arrangements that contain embedded derivatives, the fair value of which is based on the change in the fair value of the underlying assets held in trust. Embedded derivatives within coinsurance with funds withheld arrangements are reported with the host contract in Deposits and reinsurance recoverable (assumed reinsurance) or Funds held under reinsurance treaties with affiliates (ceded reinsurance) on the Balance Sheets, and changes in the fair value of the embedded derivatives are recorded in Interest credited and other benefits to contract owners/policyholders in the Statements of Operations.

Deposits and Reinsurance Recoverable

We utilize reinsurance agreements to reduce our exposure to large losses in most aspects of our insurance business. Such reinsurance permits recovery of a portion of losses from reinsurers, although it does not discharge our primary liability as direct insurer of the risks reinsured. We evaluate the financial strength of potential reinsurers and continually monitor the financial condition of reinsurers. Only those reinsurance recoverable balances deemed probable of recovery are reflected as assets on our Balance Sheets.

Off-Balance Sheet Arrangements and Aggregate Contractual Obligations

Through the normal course of investment operations, we commit to either purchase or sell securities, mortgage loans, or money market instruments, at a specified future date and at a specified price or yield. The inability of counterparties to honor these commitments may result in either a higher or lower replacement cost. Also, there is likely to be a change in the value of the securities

underlying the commitments. As of December 31, 2016 and 2015, we had off-balance sheet commitments to acquire mortgage loans of $261.3 million and $323.6 million, respectively, and purchase limited partnerships and private placement investments of $366.2 million and $285.9 million, respectively.

We have obligations for the return of non-cash collateral under an amendment to our securities lending program. Non-cash collateral received in connection with the securities lending program may not be sold or re-pledged by our lending agent, except in the event of default, and is not reflected on our Balance Sheets. For information regarding obligations under this program, see the Investments Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K. As of December 31, 2016, the fair value of securities retained as collateral by the lending agent on our behalf was $168.2 million. As of December 31, 2015, the Company did not retain any securities as collateral.

As of December 31, 2016, we had certain contractual obligations due over a period of time as summarized in the following table.

($ in millions)	Payments Due by Period				
Contractual Obligations	**Total**	**Less than 1 Year**	**1-3 Years**	**3-5 Years**	**More than 5 Years**
Purchase obligations[1]	$ 627.5	$ 569.7	$ 40.3	$ 17.5	$ -
Reserves for insurance obligations[2]	36,907.3	3,216.0	5,520.0	5,009.5	23,161.8
Retirement and other plans[3]	22.8	1.9	4.6	4.5	11.8
Long-term debt[4]	928.2	28.2	56.3	56.4	787.3
Operating lease obligations[5]	5.3	5.3	-	-	-
Securities lending and repurchase agreements[6]	279.2	279.2	-	-	-
Total[7]	$ 38,770.3	$ 4,100.3	$ 5,621.2	$ 5,087.9	$ 23,960.9

[1] Purchase obligations consist primarily of outstanding commitments under limited partnerships that may occur any time within the terms of the partnership and private loans. The exact timing, however, of funding these commitments related to partnerships and private loans cannot be estimated. Therefore, the total amount of the commitments related to partnerships and private loans is included in the category "Less than 1 Year."

[2] Reserves for insurance obligations consist of amounts required to meet our future obligations for future policy benefits and contract owner account balances. Amounts presented in the table represent estimated cash payments under such contracts, including significant assumptions related to the receipt of future premiums, mortality, morbidity, lapse, renewal, retirement, disability and annuitization comparable with actual experience. These assumptions also include market growth and interest crediting consistent with assumptions used in amortizing DAC. All estimated cash payments are undiscounted for the time value of money.

[3] Includes estimated benefit payments under our non-qualified pension plans, estimated benefit payments under our other postretirement benefit plans and estimated payments of deferred compensation based on participant elections and an average retirement age.

[4] Long-term debt, including interest, consists of the following:

- A surplus note in the principal amount of $35.0 million and the related interest payable with our affiliate, SLD. As of December 31, 2016, the outstanding principal, interest rate and maturity date, of the surplus note were $35.0 million, 7.98% and December 7, 2029, respectively.
- Surplus notes in the aggregate principal amount of $400.0 million and the related interest payable, with our affiliates, Voya Retirement Insurance and Annuity Company, RLI and SLDI. As of December 31, 2016, the aggregate amount of outstanding principal, interest rate and maturity date of these surplus notes were $400.0 million, 6.26% and December 29, 2034, respectively.

[5] Operating lease obligations relate to the rental of office space under various non-cancellable operating lease agreements, the longest term of which expires in 2017.

[6] Payables under securities loan agreements including collateral held represent the liability to return collateral received from counterparties under securities lending agreements. Securities lending agreements include provisions which permit us to call back securities with minimal notice and accordingly, the payable is classified as having a term of less than 1 year. Additionally, Securities lending agreements include non-cash collateral of $168.2 million. See the *Investments* Note in our Financial Statements in Part II, Item 8. of this Annual Report on Form 10-K for additional information concerning Securities lending agreements.

[7] Unrecognized tax benefits are excluded from the table due to immateriality.

Repurchase Agreements

We engage in dollar repurchase agreements with mortgage-backed securities ("dollar rolls") and repurchase agreements with other collateral types to increase our return on investments and improve liquidity. Such arrangements meet the requirements to be accounted for as financing arrangements. We enter into dollar roll transactions by selling existing mortgage-backed securities ("MBS") and concurrently entering into an agreement to repurchase similar securities within a short time frame at a lower price. Under repurchase agreements, we borrow cash from a counterparty at an agreed upon interest rate for an agreed upon time frame and pledge collateral in the form of securities. At the end of the agreement, the counterparty returns the collateral to us and we, in turn, repay the loan amount along with the additional agreed upon interest. We require that at all times during the term of the dollar roll and repurchase agreements, cash or other collateral types obtained is sufficient to allow us to fund substantially all of the cost of purchasing replacement assets. Cash received is invested in short-term investments, with the offsetting obligation to repay the loan included within Other liabilities on the Balance Sheets. As per the terms of the agreements, the market value of the

loaned securities is monitored with additional collateral obtained or refunded as the market value of the loaned securities fluctuates due to changes in interest rates, spreads and other risk factors.

The carrying value of the securities pledged in dollar rolls and repurchase agreement transactions and the related repurchase obligation are included in Securities pledged and Short-term debt, respectively, on the Balance Sheets. As of December 31, 2016 and 2015, we did not have any securities pledged in dollar rolls, or repurchase agreement transactions.

We also enter into reverse repurchase agreements. These transactions involve a purchase of securities and an agreement to sell substantially the same securities as those purchased. We require that, at all times during the term of the reverse repurchase agreements, cash or other collateral types provided is sufficient to allow the counterparty to fund substantially all of the cost of purchasing the replacement assets. As of December 31, 2016 and 2015, we did not have any securities pledged under reverse repurchase agreements.

The primary risk associated with short-term collateralized borrowings is that the counterparty will be unable to perform under the terms of the contract. Our exposure is limited to the excess of the net replacement cost of the securities over the value of the short-term investments. We believe the counterparties to the dollar rolls, repurchase and reverse repurchase agreements are financially responsible and that the counterparty risk is minimal.

Securities Lending

We engage in securities lending whereby certain securities from our portfolio are loaned to other institutions through a lending agent for short periods of time. We have the right to approve any institution with whom the lending agent transacts on our behalf. Initial collateral is required at a rate of 102% of the market value of the loaned securities. The lending agent retains the collateral and invests it in high quality liquid assets on our behalf. The market value of the loaned securities is monitored on a daily basis with additional collateral obtained or refunded as the market value of the loaned securities fluctuates. The lending agent indemnifies us against losses resulting from the failure of a counterparty to return securities pledged where collateral is insufficient to cover the loss. As of December 31, 2016 and 2015, the fair value of loaned securities was $270.9 million and $147.9 million, respectively, and is included in Securities pledged on the Balance Sheets.

If cash is received as collateral, the lending agent retains the cash collateral and invests it in short-term liquid assets on behalf of us. As of December 31, 2016 and 2015, cash collateral retained by the lending agent and invested in short-term liquid assets on our behalf was $111.0 million and $153.6 million, respectively, and is recorded in Short-term investments under securities loan agreements, including collateral delivered on the Balance Sheets. As of December 31, 2016 and 2015, liabilities to return collateral of $111.0 million and $153.6 million, respectively, were included in Payables under securities loan agreements, including collateral held, on the Balance Sheets.

During the first quarter of 2016 under an amendment to the securities lending program, we began accepting non-cash collateral in the form of securities. The securities retained as collateral by the lending agent may not be sold or re-pledged, except in the event of default, and are not reflected on the Balance Sheets. This collateral generally consists of U.S. Treasury, U.S. Government agency securities and MBS pools. As of December 31, 2016, the fair value of securities retained as collateral by the lending agent on our behalf was $168.2 million. As of December 31, 2015, we did not retain any securities as collateral.

Statutory Capital and Risk-Based Capital

Our primary regulator, the State of Iowa Insurance Division (the "Division") recognizes only statutory accounting practices prescribed or permitted by the State of Iowa for determining and reporting the financial condition and results of operations of an insurance company and for determining its solvency under the Iowa Insurance Law. The NAIC Accounting Practices and Procedures Manual has been adopted as a component of prescribed or permitted practices by the State of Iowa.

We are subject to minimum RBC requirements established by the Division. The formulas for determining the amount of RBC specify various weighting factors that are applied to financial balances or various levels of activity based on the perceived degree of risk. Regulatory compliance is determined by a ratio of total adjusted capital ("TAC"), as defined by the NAIC, to authorized control level RBC, as defined by the NAIC. We exceeded the minimum RBC requirements that would require any regulatory or corrective action for all periods presented herein.

We are required to prepare statutory financial statements in accordance with statutory accounting practices prescribed or permitted by the Division. Such statutory accounting practices primarily differ from U.S. GAAP by charging policy acquisition costs to expense as incurred, establishing future policy benefit liabilities and contract owner account balances using different actuarial

assumptions as well as valuing investments and certain assets and accounting for deferred taxes on a different basis. Certain assets that are not admitted under statutory accounting principles are charged directly to surplus. Depending on the regulations of the Division, the entire amount or a portion of an insurance company's asset balance can be non-admitted based on the specific rules regarding admissibility. The most significant non-admitted assets are typically deferred tax assets.

The sensitivity of our statutory reserves and surplus established for variable annuity contracts and guaranteed benefit riders to changes in the equity markets will vary depending on the magnitude of the decline. The sensitivity will be affected by the level of account values relative to the level of guaranteed amounts, product design and reinsurance. Statutory reserves for variable annuities depend upon the cumulative equity market impacts on the business in force and therefore result in non-linear relationships with respect to the level of equity market performance within any reporting period.

The statutory reserves and surplus for certain long-dated floating rate funding agreements are sensitive to changes in forward interest rates. The statutory reserves are based on the present value of the future contract payments, including interest credited, discounted at prescribed statutory rates. Increases in forward interest rates will increase the reserves and decreases in forward interest rates will decrease the reserves.

RBC is also affected by the product mix of the in force book of business (i.e., the amount of business without guarantees is not subject to the same level of reserves as the business with guarantees). RBC is an important factor in the determination of the credit and financial strength ratings of us. Declines in the market value of our separate account assets can increase the reserves for certain guaranteed benefits, even though we reinsure many of our guaranteed living benefits. Future declines in the market values of our separate account assets could cause future reductions in our surplus, which may also impact RBC.

Further, our statutory credit for reinsurance taken under the reinsurance agreement with RRII covering our guaranteed living benefits is subject to uncertainty arising from RRII's access to letters of credit from lending banks under adverse market conditions.

The Iowa Insurance Division recognizes as capital and surplus those amounts determined in conformity with statutory accounting practices prescribed or permitted by the Division. Our statutory capital and surplus was $1.9 billion and $2.1 billion as of December 31, 2016 and 2015, respectively.

See also "Reinsurance Agreements" above and "Minimum Guarantees" in Item 7A. Quantitative and Qualitative Disclosures About Market Risk.

Contingencies

For information regarding other contingencies related to legal proceedings, regulatory matters and other contingencies involving us, see the *Commitments and Contingencies* Note in our Financial Statements in Part II, Item 8. in this Annual Report on Form 10-K.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk
(Dollar amounts in millions, unless otherwise stated)

Market risk is the risk that our financial position and results of operations will be affected by fluctuations in the value of financial instruments. We have significant holdings in financial instruments and are naturally exposed to a variety of market risks. The main market risks we are exposed to include interest rate risk, equity market price risk and credit risk. We do not have material market risk exposure to "trading" activities in our Financial Statements.

Risk Management

As a financial services company offering immediate and deferred fixed annuities, and with existing blocks of funding agreements , variable annuities and other income liabilities, taking measured risks is part of our business. As part of our effort to ensure measured risk taking, we have integrated risk management in our daily business activities and strategic planning.

We place a high priority on risk management and risk control. We have comprehensive risk management and control procedures in place, which are integrated with our affiliates. We have established an integrated risk management function together with our affiliates with responsibility for the formulation of our risk appetite, strategies, policies and limits. The risk management function is also responsible for monitoring our overall market risk exposures and provides review, oversight and support functions on risk-related issues.

Our risk appetite is aligned with how our business is managed and anticipates future regulatory developments. In particular, our risk appetite is aligned with regulatory capital requirements as well as metrics that are aligned with various ratings agency models.

Our risk governance and control systems enable us to identify, control, monitor and aggregate risks and provide assurance that risks are being measured, monitored and reported adequately and effectively. To promote measured risk taking, we have integrated risk management with our business activities and strategic planning.

We have implemented several limit structures to manage risk. Examples include, but are not limited to, the following:

- At-risk limits on sensitivities of earnings and regulatory capital;
- Duration and convexity mismatch limits;
- Credit risk limits;
- Liquidity limits;
- Mortality concentration limits;
- Catastrophe and mortality exposure retention limits for our insurance risk; and
- Investment and derivative guidelines.

We are also subject to cash flow stress testing pursuant to regulatory requirements. This analysis measures the effect of changes in interest rate assumptions on asset and liability cash flows. The analysis includes the effects of:

- the timing and amount of redemptions and prepayments in our asset portfolio;
- our derivative portfolio;
- death benefits and other claims payable under the terms of our insurance products;
- lapses and surrenders in our insurance products;
- minimum interest guarantees in our insurance products; and
- book value guarantees in our insurance products.

We evaluate any shortfalls that our cash flow testing reveals and if needed increase statutory reserves or adjust portfolio management strategies.

Derivatives are financial instruments for which values are derived from interest rates, foreign currency exchange rates, financial indices, or other prices of securities or commodities. Derivatives include swaps, futures, options and forward contracts. Under U.S. insurance statutes, we may use derivatives to hedge market values or cash flows of assets or liabilities; to replicate cash market instruments; and for certain limited income generating activities. We are generally prohibited from using derivatives for speculative purposes. References below to hedging and hedge programs refer to our process of reducing exposure to various risks. This does not mean that the process necessarily results in hedge accounting treatment for the respective derivative instruments. To qualify for hedge accounting treatment, a derivative must be highly effective in mitigating the designated risk of the hedged item and meet

other specific requirements. Effectiveness of the hedge is assessed at inception and throughout the life of the hedging relationship. Even if a derivative qualifies for hedge accounting treatment, there may be an element of ineffectiveness of the hedge. The ineffective portion of a hedging relationship subject to hedge accounting is recognized in Net realized capital gains (losses) in the Statements of Operations.

Market Risk Related to Interest Rates

We define interest rate risk as the risk of an economic loss due to adverse changes in interest rates. This risk arises from our holdings in interest sensitive assets and liabilities, primarily as a result of investing life insurance premiums, fixed annuity and funding agreement deposits received in interest-sensitive assets and carrying these funds as interest-sensitive liabilities. We are also subject to interest rate risk on our variable annuity business. A sustained decline in interest rates or a prolonged period of low interest rates may subject us to higher cost of guaranteed benefits and increased hedging costs. In a rising interest rate environment, we are exposed to the risk of disintermediation through a potential increase in book value withdrawals from certain annuity products. Conversely, a steady increase in interest rates would tend to improve financial results due to reduced hedging costs, lower costs of guaranteed benefits and improvement to fixed margins.

We use product design, pricing and asset/liability management ("ALM") strategies to reduce the adverse effects of interest rate movement. Product design and pricing strategies can include the use of surrender charges, withdrawal restrictions and the ability to reset credited interest rates. ALM strategies can include the use of derivatives and duration and convexity mismatch limits. See *Risk Factors-Risks Related to Our Business-General - The level of interest rates may adversely affect our profitability, particularly in the event of a continuation of the current low interest rate environment or a period of rapidly increasing interest rates* in Part I, Item 1A. of this Annual Report on Form 10-K.

Derivatives strategies include the following:

- *Interest Risk Related to Variable Annuity Guaranteed Living Benefits*. For Variable Annuity contracts with Guaranteed Living benefits, the contract holder may elect to receive income benefits over the remainder of their lifetime. We use derivatives such as interest rate swaps and interest rate options to hedge the interest rate risk associated with this type of guarantee.
- *Other Market Value and Cash Flow Hedges*. We also use derivatives in general to hedge present or future changes in cash flows or market value changes in our assets and liabilities. We use derivatives such as interest rate swaps to specifically hedge interest rate risks associated with certain asset classes in our portfolio.

We assess interest rate exposures for financial assets, liabilities and derivatives using hypothetical test scenarios that assume either increasing or decreasing 100 basis point parallel shifts in the yield curve. The following tables summarize the net estimated potential change in fair value from hypothetical 100 basis point upward and downward shifts in interest rates as of December 31, 2016 and 2015. In calculating these amounts, we exclude gains and losses on separate account fixed income securities related to products for which the investment risk is borne primarily by the separate account contract holder rather than by us. While the test scenarios are for illustrative purposes only and do not reflect our expectations regarding future interest rates or the performance of fixed-income markets, they are a near-term, reasonably possible hypothetical change that illustrates the potential impact of such events. These tests do not measure the change in value that could result from non-parallel shifts in the yield curve. As a result, the actual change in fair value from a 100 basis point change in interest rates could be different from that indicated by these calculations.

	As of December 31, 2016			
			Hypothetical Change in Fair Value[2]	
($ in millions)	Notional	Fair Value[1]	+ 100 Basis Points Yield Curve Shift	- 100 Basis Points Yield Curve Shift
Financial assets with interest rate risk:				
Fixed maturities, including securities pledged	$ -	$ 23,269.5	$ (1,519.7)	$ 1,665.7

[1] Separate account assets and liabilities which are interest sensitive are not included herein as any interest rate risk is borne by the holder of the separate account.
[2] (Decreases) in assets or (decreases) in liabilities are presented in parentheses. Increases in assets or increases in liabilities are presented without parentheses.
[3] Certain amounts included in the Deferred annuities line are also reflected within the Guaranteed benefit derivatives lines of the table above.

Market Risk Related to Equity Market Prices

Our variable products, fixed indexed annuity ("FIA") products and general account equity securities are significantly influenced by global equity markets. Increases or decreases in equity markets impact certain assets and liabilities related to our variable products and our earnings derived from those products. Our variable products include variable annuity contracts and variable life insurance.

We assess equity risk exposures for financial assets, liabilities and derivatives using hypothetical test scenarios that assume either an increase or decrease of 10% in all equity market benchmark levels. The following tables summarize the net estimated potential change in fair value from an instantaneous increase and decrease in all equity market benchmark levels of 10% as of December 31, 2016 and 2015. In calculating these amounts, we exclude gains and losses on separate account equity securities related to products for which the investment risk is borne primarily by the separate account contract holder rather than by us. While the test scenarios are for illustrative purposes only and do not reflect our expectations regarding the future performance of equity markets, they are near-term, reasonably possible hypothetical changes that illustrate the potential impact of such events. These scenarios consider only the direct effect on fair value of declines in equity benchmark market levels and not changes in asset-based fees recognized as revenue, changes in our estimates of total gross profits used as a basis for amortizing DAC, VOBA and DSI and other costs, or changes in any other assumptions such as market volatility or mortality, utilization or persistency rates in variable contracts that could also impact the fair value of our living benefits features. In addition, these scenarios do not reflect the effect of basis risk, such as potential differences in the performance of the investment funds underlying the variable annuity products relative to the equity market benchmark we use as a basis for developing our hedging strategy. The impact of basis risk could result in larger differences between the change in fair value of the equity-based derivatives and the related living benefit features, in comparison to the hypothetical test scenarios.

	As of December 31, 2016			
			Hypothetical Change in Fair Value[1]	
($ in millions)	Notional	Fair Value	+ 10% Equity Shock	-10% Equity Shock

Net Amount at Risk ("NAR")

Minimum Guarantees

Variable annuity contracts containing minimum guaranteed death and living benefits expose us to equity risk. A decrease in the equity markets may cause a decrease in the account values, thereby increasing the possibility that we may be required to pay amounts to contract owners due to guaranteed death and living benefits. An increase in the value of the equity markets may increase account values for these contracts, thereby decreasing our risk associated with guaranteed death and living benefits.

We stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010. However, our existing variable annuity block of business contains certain guaranteed death and living benefits made available to contract owners as described below:

Guaranteed Minimum Death Benefits ("GMDB"):

- Standard - Guarantees that, upon death of the individual specified in the policy, the death benefit will be no less than the premiums paid by the contract owner, adjusted for withdrawals.
- Ratchet - Guarantees that, upon death of the individual specified in the policy, the death benefit will be no less than the greater of (1) Standard or (2) the maximum policy anniversary (or quarterly) value of the variable annuity, adjusted for withdrawals.
- Rollup - Guarantees that, upon death of the individual specified in the policy, the death benefit will be no less than the aggregate premiums paid by the contract owner, with interest at the contractual rate per annum, adjusted for withdrawals. The Rollup may be subject to a maximum cap on the total benefit.
- Combo - Guarantees that, upon death of the individual specified in the policy, the death benefit will be no less than the greater of (1) Ratchet or (2) Rollup.

A number of other versions of death benefits were offered previously but sales were discontinued. For contracts issued prior to January 1, 2000, most contracts with enhanced death benefit guarantees were reinsured to third party reinsurers to mitigate the risk produced by such guaranteed death benefits. For contracts issued on or after January 1, 2000, we instituted a hedge program in lieu of reinsurance. The hedging program is based on us entering into derivative positions to offset exposures to guaranteed minimum death benefits due to adverse changes in the equity markets.

As of the dates indicated, the guaranteed value of these death benefits in excess of account values was estimated to be as follows:

($ in millions)		December 31, 2016
Net amount at risk, before reinsurance	$	5,817
Net amount at risk, net of reinsurance		5,504

($ in millions)		December 31, 2015
Net amount at risk, before reinsurance	$	6,458
Net amount at risk, net of reinsurance		6,074

The decrease in the guaranteed value of these death benefits was primarily driven by an increase in equity markets which resulted in favorable fund performance net of deductions for fees during the year ended December 31, 2016.

The additional liabilities recognized related to GMDB, as of the periods indicated, were as follows:

($ in millions)		December 31, 2016
Separate account liability	$	30,838.9
Additional liability balance		509.9

($ in millions)		December 31, 2015
Separate account liability	$	33,321.3
Additional liability balance		517.2

The above additional liability recorded by us, net of reinsurance, represented the estimated net present value of our future obligation for guaranteed minimum death benefits in excess of account values. The decrease in additional separate account liability is mainly

due to decrements and fees offsetting favorable fund performance and the decrease in additional liability balance is mainly due to fees offsetting the favorable fund performance.

Guaranteed Minimum Living Benefits

Guaranteed Minimum Income Benefit (GMIB). Guarantees a minimum income payout, exercisable only on a contract anniversary on or after a specified date, in most cases 10 years after purchase of the GMIB rider. The income payout is determined based on contractually established annuity factors multiplied by the benefit base. The benefit base equals the premium paid at the time of product issue and may increase over time based on a number of factors, including a rollup percentage (mainly 7% or 6% depending on the version of the benefit) and ratchet frequency subject to maximum caps which vary by product version (200%, 250% or 300% of initial premium).

Guaranteed Minimum Withdrawal Benefit and Guaranteed Minimum Withdrawal Benefit for Life (GMWB/GMWBL). Guarantees an annual withdrawal amount for a specified period of time (GMWB) or life (GMWBL) that is calculated as a percentage of the benefit base that equals the premium paid at the time of product issue and may increase over time based on a number of factors, including a rollup percentage (mainly 7%, 6% or 0%, depending on versions of the benefit) and ratchet frequency (primarily annually or quarterly, depending on versions). The rollup ceases 10 years after purchase of the rider, or in the year when withdrawals occur. The percentage used to determine the guaranteed annual withdrawal amount may vary by age at first withdrawal and depends on versions of the benefit. A joint life-time withdrawal benefit option was available to include coverage for spouses. Most versions of the withdrawal benefit included reset and/or step-up features that may increase the guaranteed withdrawal amount in certain conditions. Earlier versions of the withdrawal benefit guarantee that annual withdrawals of up to 7.0% of eligible premiums may be made until eligible premiums previously paid by the contract owner are returned, regardless of account value performance. Asset allocation requirements apply at all times where withdrawals are guaranteed for life.

Guaranteed Minimum Accumulation Benefit (GMAB). Guarantees that the account value will be at least 100% of the eligible premiums paid by the customer after 10 years, adjusted for withdrawals. We offered an alternative design that guaranteed the account value to be at least 200% of the eligible premiums paid by contract owners after 20 years.

We reinsured most of our living benefit guarantee riders to RRII to mitigate the risk produced by such benefits. This reinsurance agreement covers all of the GMIBs, as well as the GMWBs with lifetime guarantees (the "Reinsured living benefits"). The GMABs and the GMWBs without lifetime guarantees (the "Non-reinsured living benefits") are not covered by this reinsurance. The Non-reinsured living benefits are still covered by our variable annuity guarantee hedging program.

The following guaranteed living benefits information is as of the dates indicated:

($ in millions)	Non-reinsured Living Benefits (GMAB/GMWB)	Reinsured Living Benefits (GMIB/GMWBL)
	December 31, 2016	
Net amount at risk, before reinsurance	$ 14	$ 5,087
Net amount at risk, net of reinsurance	14	-
($ in millions)	December 31, 2015	
Net amount at risk, before reinsurance	$ 17	$ 5,087
Net amount at risk, net of reinsurance	17	-

The net amount at risk for the reinsured living benefits is equal to the excess of the present value of the minimum guaranteed annuity payments available to the contract holder over the current account value. The methodology used to calculate the net amount at risk partially reflects the current interest rate environment and also includes a provision for the expected mortality of the clients covered by these living benefits. The net amount at risk of these living benefits (GMIB/GMWBL) from December 31, 2015 to December 31, 2016 remained neutral. The favorable interest and equity markets were mainly offset by higher living benefit guarantees.

The net amount at risk for the non-reinsured living benefits is equal to the guaranteed value of these benefits in excess of the account values, which is reflected in the table above.

The separate account liabilities subject to the requirements for additional reserve liabilities under ASC Topic 944 for minimum guaranteed benefits and the additional liabilities recognized related to minimum guarantees, by type, as of the dates indicated, were as follows:

($ in millions)	Non-reinsured Living Benefits (GMAB/GMWB)	Reinsured Living Benefits (GMIB/GMWBL)
	December 31, 2016	
Separate account liability	$ 534.0	$ 23,118.1
Additional liability balance, net of reinsurance	22.1	892.2
	December 31, 2015	
Separate account liability	$ 593.5	$ 25,149.5
Additional liability balance, net of reinsurance	29.1	1,246.0

As of December 31, 2016 and 2015, the above additional liabilities for non-reinsured living benefits recorded by us, net of reinsurance, represent the estimated net present value of our future obligations for these benefits. The above additional liabilities for reinsured living benefits recorded by us, net of reinsurance, represent the present value of future claims less the present value of future attributed fees (GMWBLs) or the benefits ratio approach (GMIBs), less the reinsurance ceded reserve calculated under Accounting Standards Codification Topic 944. The additional liability for GMIBs was zero. The decrease in the additional liability balance for reinsured living benefits corresponds to the decrease in the GMWBL liability, which decreased mainly due to increase in the equity markets during the year ended December 31, 2016.

Variable Annuity Hedge Program

We primarily mitigate variable annuity market risk exposures through a hedging program referred to as our "Variable Annuity Hedge Program". Market risk arises primarily from the minimum guarantees within the variable annuity products, whose economic costs are primarily dependent on future equity market returns, interest rate levels, equity volatility levels and policyholder behavior. The objective of the Variable Annuity Hedge Program is to protect regulatory and rating agency capital from immediate market movements. The hedge program is executed through the purchase and sale of various instruments (described below), and is designed to limit the reserve and rating agency capital increases and certain rebalancing costs resulting from an immediate change in equity markets, interest rates, volatility, credit spread and foreign exchange rates to an amount we believe prudent for a company of our size and scale. The hedge targets may change over time with market movements, changes in regulatory and rating agency capital, available collateral and our risk tolerance. While the Variable Annuity Hedge Program does not explicitly hedge statutory or U.S. GAAP reserves, as markets move up or down, in aggregate the returns generated by the Variable Annuity Hedge Program will significantly offset the statutory and U.S. GAAP reserve changes due to market movements.

The types of instruments employed in the execution of our Variable Annuity Hedge Program to mitigate market impacts on policyholder-directed investments are as follows:

- Equity index futures, options and total return swaps are used to mitigate the risk of equity market changes;
- Interest rate swaps and options are used to mitigate the risk of changes in interest rates;
- Credit default swaps and total return swaps are used to mitigate the risk of credit spread changes;
- Variance swaps and equity options are used to mitigate the risk of changes in volatility; and
- Foreign exchange forwards are used to mitigate the impact of policyholder-directed investments in international funds with exposure to fluctuations in exchange rates of certain foreign currencies.

Hedging of FIA Benefits

We mitigate FIA market risk exposures through a combination of capital market hedging and product design. For FIAs, these risks stem from the minimum guaranteed contract value offered and the additional interest credits (Equity Participation or Interest Rate Participation) based on exposure to various stock market indices or the interest rate benchmark. The minimum guarantees, interest rate and equity market exposures, are strongly dependent on capital markets and, to a lesser degree, policyholder behavior.

These hedge programs are limited to the current policy term of the liabilities, based on current participation rates and index caps. Future returns, which may be reflected in FIA credited rates beyond the current policy term, are not hedged until such time that policyholder selections of future crediting strategies have been made.

Equity options are used to hedge against an increase in various equity indices. An increase in various equity indices may result in increased payments to contract holders of FIA contracts. The equity options offset this increased expense.

Interest rate options are used to hedge against an increase in the interest rate benchmark. An increase in the interest rate benchmark may result in increased payments to contract holders of FIA contracts. The interest rate options offset this increased expense.

Market Risk Related to Credit Risk

Credit risk is primarily embedded in the general account portfolio. The carrying value of our fixed maturity, including securities pledged, and equity portfolio totaled $23.3 billion and $23.7 billion as of December 31, 2016 and 2015, respectively. Our credit risk materializes primarily as impairment losses and/or credit risk related trading losses. We are exposed to occasional cyclical economic downturns, during which impairment losses may be significantly higher than the long-term historical average. This is offset by years where we expect the actual impairment losses to be substantially lower than the long-term average.

Credit risk in the portfolio can also materialize as increased capital requirements caused by rating down-grades. The effect of rating migration on our capital requirements is also dependent on the economic cycle and increased asset impairment levels may go hand in hand with increased asset related capital requirements.

We manage the risk of default and rating migration by applying disciplined credit evaluation and underwriting standards and prudently limiting allocations to lower quality, higher risk investments. In addition, we diversify our exposure by issuer and country, using rating based issuer and country limits, as well as by industry segment, using specific investment constraints. Limit compliance is monitored on a daily, monthly, or quarterly basis. Limit violations are reported to senior management and we are actively involved in decisions around curing such limit violations.

We also have credit risk related to the ability of our derivatives counterparties to honor their obligations to pay the contract amounts under various agreements. In order to minimize the risk of credit loss on such contracts, we diversify our exposures among several counterparties and limit the amount of exposure to each based on credit rating. For most counterparties, we have collateral agreements in place that would substantially limit our credit losses in case of a counterparty default. We also generally limit our selection of counterparties that we do new transactions with to those with an "A-" credit rating or above. When exceptions are made to that principle, we ensure that we obtain collateral to mitigate our risk of loss. For derivatives counterparty risk exposures (which includes reverse repurchase and securities lending transactions), we measure and monitor our risks on a market value basis daily.

Credit risk also arises to the extent that the separate account investments underlying our variable annuity contracts hold credit sensitive assets. This risk is offset by the use of credit default swaps as described in our Variable Annuity Hedge Program.

Report of Independent Registered Public Accounting Firm

The Board of Directors
Voya Insurance and Annuity Company

We have audited the accompanying balance sheets of Voya Insurance and Annuity Company as of December 31, 2016 and 2015, and the related statements of operations, comprehensive income, changes in shareholder's equity, and cash flows for each of the three years in the period ended December 31, 2016. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. We were not engaged to perform an audit of the Company's internal control over financial reporting. Our audits include consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Voya Insurance and Annuity Company at December 31, 2016 and 2015, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2016, in conformity with U.S. generally accepted accounting principles.

1. Business, Basis of Presentation and Significant Accounting Policies

Business

Voya Insurance and Annuity Company ("VIAC" or "the Company") is a stock life insurance company domiciled in the State of Iowa and provides financial products and services in the United States. VIAC is authorized to conduct its insurance business in all states, except New York, and in the District of Columbia.

Prior to May 2013, Voya Financial, Inc., together with its subsidiaries, including the Company, was an indirect, wholly owned subsidiary of ING Groep N.V. ("ING Group" or "ING"), a global financial services holding company based in The Netherlands. In May 2013, Voya Financial, Inc. completed its initial public offering of common stock, including the issuance and sale of common stock by Voya Financial, Inc. and the sale of shares of common stock owned indirectly by ING Group. Between October 2013 and March 2015, ING Group completed the sale of its remaining shares of common stock of Voya Financial, Inc. in a series of registered public offerings. ING Group continues to hold certain warrants to purchase up to 26,050,846 shares of Voya Financial, Inc. common stock at an exercise price of $48.75, in each case subject to adjustments.

VIAC is a direct, wholly owned subsidiary of Voya Holdings Inc. ("Parent"), which is a direct, wholly owned subsidiary of Voya Financial, Inc.

The Company offers various insurance products, including fixed and indexed annuities, investment-only products and payout annuities for pre-retirement wealth accumulation and postretirement income management. The Company's annuity products are distributed by national and regional brokerage and securities firms, independent broker-dealers, banks, life insurance companies with captive agency sales forces, independent insurance agents, independent marketing organizations and affiliated broker-dealers. The Company's primary annuity customers are individual consumers. The Company stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010, as part of a global business strategy and risk reduction plan. New amounts will continue to be deposited in VIAC variable annuities as add-on premiums to existing contracts.

In 2009, the Company made a strategic decision to run-off the assets and liabilities related to guaranteed investment contracts and funding agreements previously issued to institutional investors and corporate benefit plans. As such, no guaranteed investment contracts were outstanding during 2016 and 2015. Additionally, all of the previously issued funding agreements will mature or be terminated by the end of 2017. We may issue new funding agreements to support liquidity in the future.

The Company has one operating segment.

Basis of Presentation

The accompanying Financial Statements of the Company have been prepared in accordance with accounting principles generally accepted in the United States ("U.S. GAAP").

Certain immaterial reclassifications have been made to prior year financial information to conform to the current year classifications.

Significant Accounting Policies

Estimates and Assumptions

The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the Financial Statements and the reported amounts of revenues and expenses during the reporting period. Those estimates are inherently subject to change and actual results could differ from those estimates.

The Company has identified the following accounts and policies as the most significant in that they involve a higher degree of judgment, are subject to a significant degree of variability and/or contain significant accounting estimates:

- Reserves for future policy benefits;
- Deferred policy acquisition costs ("DAC"), value of business acquired ("VOBA") and deferred sales inducements ("DSI");
- Valuation of investments and derivatives;
- Impairments;
- Income taxes; and
- Contingencies.

Fair Value Measurement

The Company measures the fair value of its financial assets and liabilities based on assumptions used by market participants in pricing the asset or liability, which may include inherent risk, restrictions on the sale or use of an asset, or nonperformance risk, including the Company's own credit risk. The estimate of fair value is the price that would be received to sell an asset or transfer a liability ("exit price") in an orderly transaction between market participants in the principal market, or the most advantageous market in the absence of a principal market, for that asset or liability. The Company uses a number of valuation sources to determine the fair values of its financial assets and liabilities, including quoted market prices, third-party commercial pricing services, third-party brokers, industry-standard, vendor-provided software that models the value based on market observable inputs, and other internal modeling techniques based on projected cash flows.

Investments

The accounting policies for the Company's principal investments are as follows:

Fixed Maturities and Equity Securities: The Company's fixed maturities and equity securities are currently designated as available-for-sale, except those accounted for using the fair value option ("FVO"). Available-for-sale securities are reported at fair value and unrealized capital gains (losses) on these securities are recorded directly in Accumulated other comprehensive income (loss) ("AOCI") and presented net of related changes in DAC, VOBA, DSI and Deferred income taxes. In addition, certain fixed maturities have embedded derivatives, which are reported with the host contract on the Balance Sheets.

The Company has elected the FVO for certain of its fixed maturities to better match the measurement of assets and liabilities in the Statements of Operations. Certain collateralized mortgage obligations ("CMOs"), primarily interest-only and principal-only strips, are accounted for as hybrid instruments and valued at fair value with changes in the fair value recorded in Other net realized capital gains (losses) in the Statements of Operations.

Purchases and sales of fixed maturities and equity securities, excluding private placements, are recorded on the trade date. Purchases and sales of private placements and mortgage loans are recorded on the closing date. Investment gains and losses on sales of securities are generally determined on a first-in-first-out ("FIFO") basis.

Interest income on fixed maturities is recorded when earned using an effective yield method, giving effect to amortization of premiums and accretion of discounts. Dividends on equity securities are recorded when declared. Such dividends and interest income are recorded in Net investment income in the Statements of Operations.

Included within fixed maturities are loan-backed securities, including residential mortgage-backed securities ("RMBS"), commercial mortgage-backed securities ("CMBS") and asset-backed securities ("ABS"). Amortization of the premium or discount from the purchase of these securities considers the estimated timing and amount of prepayments of the underlying loans. Actual prepayment experience is periodically reviewed and effective yields are recalculated when differences arise between the prepayments originally anticipated and the actual prepayments received and currently anticipated. Prepayment assumptions for single-class and multi-class mortgage-backed securities ("MBS") and ABS are estimated by management using inputs obtained from third-party specialists, including broker-dealers, and based on management's knowledge of the current market. For prepayment-sensitive securities such as interest-only and principal-only strips, inverse floaters and credit-sensitive MBS and ABS securities, which represent beneficial interests in securitized financial assets that are not of high credit quality or that have

been credit impaired, the effective yield is recalculated on a prospective basis. For all other MBS and ABS, the effective yield is recalculated on a retrospective basis.

Short-term Investments: Short-term investments include investments with remaining maturities of one year or less, but greater than three months, at the time of purchase. These investments are stated at fair value.

Assets Held in Separate Accounts: Assets held in separate accounts are reported at the fair values of the underlying investments in the separate accounts. The underlying investments include mutual funds, short-term investments, cash and fixed maturities.

Mortgage Loans on Real Estate: The Company's mortgage loans on real estate are all commercial mortgage loans, which are reported at amortized cost, less impairment write-downs and allowance for losses. If a mortgage loan is determined to be impaired (i.e., when it is probable that the Company will be unable to collect all amounts due according to the contractual terms of the loan agreement), the carrying value of the mortgage loan is reduced to the lower of either the present value of expected cash flows from the loan, discounted at the loan's original purchase yield, or fair value of the collateral. For those mortgages that are determined to require foreclosure, the carrying value is reduced to the fair value of the underlying collateral, net of estimated costs to obtain and sell at the point of foreclosure. The carrying value of the impaired loans is reduced by establishing a permanent write-down recorded in Other net realized capital gains (losses) in the Statements of Operations. Property obtained from foreclosed mortgage loans is recorded in Other investments on the Balance Sheets.

Mortgage loans are evaluated by the Company's investment professionals, including an appraisal of loan-specific credit quality, property characteristics and market trends. Loan performance is continuously monitored on a loan-specific basis throughout the year. The Company's review includes submitted appraisals, operating statements, rent revenues and annual inspection reports, among other items. This review evaluates whether the properties are performing at a consistent and acceptable level to secure the debt.

Mortgages are rated for the purpose of quantifying the level of risk. Those loans with higher risk are placed on a watch list and are closely monitored for collateral deficiency or other credit events that may lead to a potential loss of principal or interest. The Company defines delinquent mortgage loans consistent with industry practice as 60 days past due.

Commercial loans are placed on non-accrual status when 90 days in arrears if the Company has concerns regarding the collectability of future payments, or if a loan has matured without being paid off or extended. Factors considered may include conversations with the borrower, loss of major tenant, bankruptcy of borrower or major tenant, decreased property cash flow, number of days past due, or various other circumstances. Based on an assessment as to the collectability of the principal, a determination is made either to apply against the book value or apply according to the contractual terms of the loan. Funds recovered in excess of book value would then be applied to recover expenses, impairments, and then interest. Accrual of interest resumes after factors resulting in doubts about collectability have improved.

The Company records an allowance for probable losses incurred on non-impaired loans on an aggregate basis, rather than specifically identified probable losses incurred by individual loan.

Policy Loans: Policy loans are carried at an amount equal to the unpaid balance. Interest income on such loans is recorded as earned in Net investment income using the contractually agreed upon interest rate. Generally, interest is capitalized on the policy's anniversary date. Valuation allowances are not established for policy loans, as these loans are collateralized by the cash surrender value of the associated insurance contracts. Any unpaid principal or interest on the loan is deducted from the account value or the death benefit prior to settlement of the policy.

Limited Partnerships/Corporations: The Company uses the equity method of accounting for investments in limited partnership interests, which consists primarily of private equities and hedge funds. Generally, the Company records its share of earnings using a lag methodology, relying on the most recent financial information available, generally not to exceed three months. The Company's earnings from limited partnership interests accounted for under the equity method are recorded in Net investment income.

Other Investments: Other investments are comprised primarily of Federal Home Loan Bank ("FHLB") stock and property obtained from foreclosed mortgage loans, as well as other miscellaneous investments. The Company is a member of the FHLB system

and is required to own a certain amount of FHLB stock based on the level of borrowings and other factors. FHLB stock is carried at cost, classified as a restricted security and periodically evaluated for impairment based on ultimate recovery of par value.

Securities Lending: The Company engages in securities lending whereby certain securities from its portfolio are loaned to other institutions, through a lending agent, for short periods of time. The Company has the right to approve any institution with whom the lending agent transacts on its behalf. Initial collateral, primarily cash, is required at a rate of 102% of the market value of the loaned securities. The lending agent retains the cash collateral and invests it in short-term liquid assets on behalf of the Company. The market value of the loaned securities is monitored on a daily basis with additional collateral obtained or refunded as the market value of the loaned securities fluctuates. The lending agent indemnifies the Company against losses resulting from the failure of a counterparty to return securities pledged where collateral is insufficient to cover the loss.

Impairments

The Company evaluates its available-for-sale general account investments quarterly to determine whether there has been an other-than-temporary decline in fair value below the amortized cost basis.This evaluation process entails considerable judgment and estimation. Factors considered in this analysis include, but are not limited to, the length of time and the extent to which the fair value has been less than amortized cost, the issuer's financial condition and near-term prospects, future economic conditions and market forecasts, interest rate changes and changes in ratings of the security. An extended and severe unrealized loss position on a fixed maturity may not have any impact on: (a) the ability of the issuer to service all scheduled interest and principal payments and (b) the evaluation of recoverability of all contractual cash flows or the ability to recover an amount at least equal to its amortized cost based on the present value of the expected future cash flows to be collected. In contrast, for certain equity securities, the Company gives greater weight and consideration to a decline in market value and the likelihood such market value decline will recover.

When assessing the Company's intent to sell a security, or if it is more likely than not it will be required to sell a security before recovery of its amortized cost basis, management evaluates facts and circumstances such as, but not limited to, decisions to rebalance the investment portfolio and sales of investments to meet cash flow or capital needs.

When the Company has determined it has the intent to sell, or if it is more likely than not that the Company will be required to sell a security before recovery of its amortized cost basis, and the fair value has declined below amortized cost ("intent impairment"), the individual security is written down from amortized cost to fair value, and a corresponding charge is recorded in Net realized capital gains (losses) in the Statements of Operations as an other-than-temporary impairment ("OTTI"). If the Company does not intend to sell the security, and it is not more likely than not that the Company will be required to sell the security before recovery of its amortized cost basis, but the Company has determined that there has been an other-than-temporary decline in fair value below the amortized cost basis, the OTTI is bifurcated into the amount representing the present value of the decrease in cash flows expected to be collected ("credit impairment") and the amount related to other factors ("noncredit impairment"). The credit impairment is recorded in Net realized capital gains (losses) in the Statements of Operations. The noncredit impairment is recorded in Other comprehensive income (loss).

The Company uses the following methodology and significant inputs to determine the amount of the OTTI credit loss:

- When determining collectability and the period over which the value is expected to recover for U.S. and foreign corporate securities, foreign government securities and state and political subdivision securities, the Company applies the same considerations utilized in its overall impairment evaluation process, which incorporates information regarding the specific security, the industry and geographic area in which the issuer operates and overall macroeconomic conditions. Projected future cash flows are estimated using assumptions derived from the Company's best estimates of likely scenario-based outcomes, after giving consideration to a variety of variables that includes, but is not limited to: general payment terms of the security; the likelihood that the issuer can service the scheduled interest and principal payments; the quality and amount of any credit enhancements; the security's position within the capital structure of the issuer; possible corporate restructurings or asset sales by the issuer; and changes to the rating of the security or the issuer by rating agencies.
- Additional considerations are made when assessing the unique features that apply to certain structured securities, such as subprime, Alt-A, non-agency RMBS, CMBS and ABS. These additional factors for structured securities include, but are not limited to: the quality of underlying collateral; expected prepayment speeds; loan-to-value ratios; debt service

coverage ratios; current and forecasted loss severity; consideration of the payment terms of the underlying assets backing a particular security; and the payment priority within the tranche structure of the security.

- When determining the amount of the credit loss for U.S. and foreign corporate securities, foreign government securities and state and political subdivision securities, the Company considers the estimated fair value as the recovery value when available information does not indicate that another value is more appropriate. When information is identified that indicates a recovery value other than estimated fair value, the Company considers in the determination of recovery value the same considerations utilized in its overall impairment evaluation process, which incorporates available information and the Company's best estimate of scenario-based outcomes regarding the specific security and issuer; possible corporate restructurings or asset sales by the issuer; the quality and amount of any credit enhancements; the security's position within the capital structure of the issuer; fundamentals of the industry and geographic area in which the security issuer operates; and the overall macroeconomic conditions.
- The Company performs a discounted cash flow analysis comparing the current amortized cost of a security to the present value of future cash flows expected to be received, including estimated defaults and prepayments. The discount rate is generally the effective interest rate of the fixed maturity prior to impairment.

In periods subsequent to the recognition of the credit related impairment components of OTTI on a fixed maturity, the Company accounts for the impaired security as if it had been purchased on the measurement date of the impairment. Accordingly, the discount (or reduced premium) based on the new cost basis is accreted into Net investment income over the remaining term of the fixed maturity in a prospective manner based on the amount and timing of estimated future cash flows.

Derivatives

The Company's use of derivatives is limited mainly to economic hedging to reduce the Company's exposure to cash flow variability of assets and liabilities, interest rate risk, credit risk, exchange rate risk and market risk. It is the Company's policy not to offset amounts recognized for derivative instruments and amounts recognized for the right to reclaim cash collateral or the obligation to return cash collateral arising from derivative instruments executed with the same counterparty under a master netting arrangement.

The Company enters into interest rate, equity market, credit default and currency contracts, including swaps, futures, forwards, caps, floors and options, to reduce and manage various risks associated with changes in value, yield, price, cash flow or exchange rates of assets or liabilities held or intended to be held, or to assume or reduce credit exposure associated with a referenced asset, index or pool. The Company also utilizes options and futures on equity indices to reduce and manage risks associated with its annuity products. Derivative contracts are reported as Derivatives assets or liabilities on the Balance Sheets at fair value. Changes in the fair value of derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations.

To qualify for hedge accounting, at the inception of the hedging relationship, the Company formally documents its risk management objective and strategy for undertaking the hedging transaction, as well as its designation of the hedge as either (a) a hedge of the exposure to changes in the estimated fair value of a recognized asset or liability or an identified portion thereof that is attributable to a particular risk ("fair value hedge") or (b) a hedge of a forecasted transaction or of the variability of cash flows that is attributable to interest rate risk to be received or paid related to a recognized asset or liability ("cash flow hedge"). In this documentation, the Company sets forth how the hedging instrument is expected to hedge the designated risks related to the hedged item and sets forth the method that will be used to retrospectively and prospectively assess the hedging instrument's effectiveness and the method that will be used to measure ineffectiveness. A derivative designated as a hedging instrument must be assessed as being highly effective in offsetting the designated risk of the hedged item. Hedge effectiveness is formally assessed at inception and periodically throughout the life of the designated hedging relationship.

- *Fair Value Hedge*: For derivative instruments that are designated and qualify as a fair value hedge, the gain or loss on the derivative instrument, as well as the hedged item, to the extent of the risk being hedged, are recognized in Other net realized capital gains (losses) in the Statements of Operations.
- *Cash Flow Hedge*: For derivative instruments that are designated and qualify as a cash flow hedge, the effective portion of the gain or loss on the derivative instrument is reported as a component of AOCI and reclassified into earnings in the same periods during which the hedged transaction impacts earnings in the same line item associated with the forecasted transaction. The ineffective portion of the derivative's change in value, if any, along with any of the derivative's change

in value that is excluded from the assessment of hedge effectiveness, are recorded in Other net realized capital gains (losses) in the Statements of Operations.

When hedge accounting is discontinued because it is determined that the derivative is no longer expected to be highly effective in offsetting changes in the estimated fair value or cash flows of a hedged item, the derivative continues to be carried on the Balance Sheets at its estimated fair value, with subsequent changes in estimated fair value recognized currently in Other net realized capital gains (losses). The carrying value of the hedged asset or liability under a fair value hedge is no longer adjusted for changes in its estimated fair value due to the hedged risk, and the cumulative adjustment to its carrying value is amortized into income over the remaining life of the hedged item. Provided the hedged forecasted transaction is still probable of occurrence, the changes in estimated fair value of derivatives recorded in Other comprehensive income (loss) related to discontinued cash flow hedges are released into the Statements of Operations when the Company's earnings are affected by the variability in cash flows of the hedged item.

When hedge accounting is discontinued because it is no longer probable that the forecasted transactions will occur on the anticipated date or within two months of that date, the derivative continues to be carried on the Balance Sheets at its estimated fair value, with changes in estimated fair value recognized currently in Other net realized capital gains (losses). Derivative gains and losses recorded in Other comprehensive income (loss) pursuant to the discontinued cash flow hedge of a forecasted transaction that is no longer probable are recognized immediately in Other net realized capital gains (losses).

The Company also has investments in certain fixed maturities and has issued certain annuity products that contain embedded derivatives for which fair value is at least partially determined by levels of or changes in domestic and/or foreign interest rates (short-term or long-term), exchange rates, prepayment rates, equity markets or credit ratings/spreads. Embedded derivatives within fixed maturities are included with the host contract on the Balance Sheets, and changes in the fair value of the embedded derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations. Embedded derivatives within certain annuity products are included in Future policy benefits and contract owner account balances on the Balance Sheets, and changes in the fair value of the embedded derivatives are recorded in Other net realized capital gains (losses) in the Statements of Operations.

In addition, the Company has entered into coinsurance with funds withheld reinsurance arrangements that contain embedded derivatives, the fair value of which is based on the change in the fair value of the underlying assets held in trust. The embedded derivatives within coinsurance with funds withheld arrangements are reported with the host contract in Deposits and reinsurance recoverable or Funds held under reinsurance treaties with affiliates on the Balance Sheets, and changes in the fair value of the embedded derivatives are recorded in Interest credited and other benefits to contract owners/policyholders in the Statements of Operations.

Cash and Cash Equivalents

Cash and cash equivalents include cash on hand, amounts due from banks and other highly liquid investments, such as money market instruments and debt instruments with maturities of three months or less at the time of purchase. Cash and cash equivalents are stated at fair value.

Deferred Policy Acquisition Costs, Value of Business Acquired and Deferred Sales Inducements

DAC represents policy acquisition costs that have been capitalized and are subject to amortization and interest. Capitalized costs are incremental, direct costs of contract acquisition and certain other costs related directly to successful acquisition activities. Such costs consist principally of commissions, underwriting, sales and contract issuance and processing expenses directly related to the successful acquisition of new and renewal business. Indirect or unsuccessful acquisition costs, maintenance, product development and overhead expenses are charged to expense as incurred. VOBA represents the outstanding value of in-force business acquired and is subject to amortization and interest. The value is based on the present value of estimated net cash flows embedded in the insurance contracts at the time of the acquisition and increased for subsequent deferrable expenses on purchased policies. (See "Sales Inducements" below.) DAC, VOBA and DSI are adjusted for the impact of unrealized capital gains (losses) on investments, as if such gains (losses) have been realized, with corresponding adjustments included in AOCI.

Amortization Methodologies

The Company amortizes DAC and VOBA related to universal life ("UL") and variable universal life ("VUL") contracts and fixed and variable deferred annuity contracts over the estimated lives of the contracts in relation to the emergence of estimated gross profits. Assumptions as to mortality, persistency, interest crediting rates, fee income, returns associated with separate account performance, impact of hedge performance, expenses to administer the business and certain economic variables, such as inflation, are based on the Company's experience and overall capital markets. At each valuation date, estimated gross profits are updated with actual gross profits, and the assumptions underlying future estimated gross profits are evaluated for continued reasonableness. Adjustments to estimated gross profits require that amortization rates be revised retroactively to the date of the contract issuance ("unlocking").

Recoverability testing is performed for current issue year products to determine if gross profits are sufficient to cover DAC, VOBA, DSI, estimated benefits and related expenses. In subsequent years, the Company performs testing to assess the recoverability of DAC, VOBA and DSI on an annual basis, or more frequently if circumstances indicate a potential loss recognition issue exists. If DAC, VOBA or DSI are not deemed recoverable from future gross profits, charges will be applied against the DAC, VOBA or DSI balances before an additional reserve is established.

During the year ended December 31, 2016, the Company's reviews resulted in loss recognition of $170.0 before income taxes, of which $137.7 and $32.3 was recorded to Net amortization of DAC and VOBA and Interest credited and other benefits to contract owners, respectively, in the Statements of Operations, with a corresponding decrease on the Balance Sheets to Deferred policy acquisition costs, Value of business acquired, and Sales inducements to contract owners.

During the year ended December 31, 2015, the Company's reviews resulted in loss recognition of $342.0 before income taxes, of which $276.9 and $65.1 was recorded to Net amortization of DAC and VOBA and Interest credited and other benefits to contract owners, respectively, in the Statements of Operations, with a corresponding decrease on the Balance Sheets to Deferred policy acquisition costs, Value of business acquired, and Sales inducements to contract owners.

The Company did not have any loss recognition for the year ended December 31, 2014.

Internal Replacements

Contract owners may periodically exchange one contract for another, or make modifications to an existing contract. These transactions are identified as internal replacements. Internal replacements that are determined to result in substantially unchanged contracts are accounted for as continuations of the replaced contracts. Any costs associated with the issuance of the new contracts are considered maintenance costs and expensed as incurred. Unamortized DAC, VOBA and DSI related to the replaced contracts continue to be deferred and amortized in connection with the new contracts. Internal replacements that are determined to result in contracts that are substantially changed are accounted for as extinguishments of the replaced contracts, and any unamortized DAC, VOBA and DSI related to the replaced contracts are written off to the same account in which amortization is reported in the Statements of Operations.

Assumptions

Changes in assumptions can have a significant impact on DAC, VOBA and DSI balances, amortization rates, reserve levels, and results of operations. Assumptions are management's best estimate of future outcome.

Several assumptions are considered significant in the estimation of gross profits associated with the Company's variable products. One significant assumption is the assumed return associated with the variable account performance. To reflect the volatility in the equity markets, this assumption involves a combination of near-term expectations and long-term assumptions regarding market performance. The overall return on the variable account is dependent on multiple factors, including the relative mix of the underlying sub-accounts among bond funds and equity funds, as well as equity sector weightings. The Company uses a reversion to the mean approach, which assumes that the market returns over the entire mean reversion period are consistent with a long-term level of equity market appreciation. The Company monitors market events and only changes the assumption when sustained deviations are expected. This methodology incorporates a 9% long-term equity return assumption, a 14% cap and a five-year look-forward period.

Other significant assumptions used in the estimation of gross profits include mortality, and for products with credited rates include interest rate spreads and credit losses. Estimated gross profits of variable annuity contracts are sensitive to mortality and estimated policyholder behavior assumptions, such as surrender, lapse and annuitization rates.

Sales Inducements

DSI represent benefits paid to contract owners for a specified period that are incremental to the amounts the Company credits on similar contracts without sales inducements and are higher than the contract's expected ongoing crediting rates for periods after the inducement. The Company defers sales inducements and amortizes DSI over the estimated lives of the related contracts using the same methodology and assumptions used to amortize DAC. The amortization of DSI is included in Interest credited and other benefits to contract owners in the Statements of Operations. Each year, or more frequently if circumstances indicate a potentially significant recoverability issue exists, the Company reviews DSI to determine the recoverability of these balances.

Future Policy Benefits and Contract Owner Accounts

Future Policy Benefits
The Company establishes and carries actuarially-determined reserves that are calculated to meet its future obligations, including estimates of unpaid claims and claims that the Company believes have been incurred but have not yet been reported as of the balance sheet date. The principal assumptions used to establish liabilities for future policy benefits are based on Company experience and periodically reviewed against industry standards. These assumptions include mortality, morbidity, policy lapse, contract renewal, payment of subsequent premiums or deposits by the contract owner, retirement, investment returns, inflation, benefit utilization and expenses. Changes in, or deviations from, the assumptions used can significantly affect the Company's reserve levels and related results of operations.

- Reserves for traditional life insurance contracts (term insurance, participating and non-participating whole life insurance and traditional group life insurance) and accident and health insurance represent the present value of future benefits to be paid to or on behalf of contract owners and related expenses, less the present value of future net premiums. Assumptions as to interest rates, mortality, expenses and persistency are based on the Company's estimates of anticipated experience at the period the policy is sold or acquired, including a provision for adverse deviation. Interest rates used to calculate the present value of these reserves ranged from 2.3% to 7.2%.
- Reserves for payout contracts with life contingencies are equal to the present value of expected future payments. Assumptions as to interest rates, mortality and expenses are based on the Company's estimates of anticipated experience at the period the policy is sold or acquired, including a provision for adverse deviation. Such assumptions generally vary by annuity plan type, year of issue and policy duration. Interest rates used to calculate the present value of future benefits ranged from 1.0% to 7.5%.

Although assumptions are "locked-in" upon the issuance of traditional life insurance contracts, certain accident and health insurance contracts and payout contracts with life contingencies, significant changes in experience or assumptions may require the Company to provide for expected future losses on a product by establishing premium deficiency reserves. Premium deficiency reserves are determined based on best estimate assumptions that exist at the time the premium deficiency reserve is established and do not include a provision for adverse deviation. During the years ended December 31, 2016 and 2015, the Company established premium deficiency reserves of $36.3 and $126.0, respectively, before tax related to certain payout annuity contracts, which were recorded as increases in Policyholder benefits and contract owner balances with a corresponding increase in Deposits and reinsurance recoverable, as the reserves are ceded to an affiliate on a 100% coinsurance and coinsurance funds withheld basis. The establishment of these premium deficiency reserve had no impact in the Statements of Operations for the years ended December 31, 2016 and 2015. The Company did not establish any premium deficiency reserves during the year ended December 31, 2014.

Contract Owner Account Balances
Contract owner account balances relate to universal life-type and investment-type contracts, as follows:

- Account balances for funding agreements are calculated using the amount deposited with the Company, less withdrawals, plus interest accrued to the ending valuation date. Interest on these contracts is accrued by a predetermined index, plus a spread or a fixed rate, established at the issue date of the contract.

- Account balances for universal life-type contracts, including VUL, are equal to cumulative deposits, less charges, withdrawals and account values released upon death, plus credited interest thereon.
- Account balances for fixed annuities and payout contracts without life contingencies are equal to cumulative deposits, less charges and withdrawals, plus credited interest thereon. Credited interest rates vary by product and ranged up to 7.5% for the years 2016, 2015 and 2014. Account balances for group immediate annuities without life contingent payouts are equal to the discounted value of the payment at the implied break-even rate.
- For fixed-indexed annuity contracts ("FIAs"), the aggregate initial liability is equal to the deposit received, plus a bonus, if applicable, and is split into a host component and an embedded derivative component. Thereafter, the host liability accumulates at a set interest rate, and the embedded derivative liability is recognized at fair value.

Product Guarantees and Additional Reserves
The Company calculates additional reserve liabilities for certain universal life-type products and certain variable annuity guaranteed benefits. The Company periodically evaluates its estimates and adjusts the additional liability balance, with a related charge or credit to benefit expense, if actual experience or other evidence suggests that earlier assumptions should be revised. Changes in, or deviations from, the assumptions used can significantly affect the Company's reserve levels and related results of operations.

Universal and Variable Life: Reserves for UL and VUL secondary guarantees and paid-up guarantees are calculated by estimating the expected value of death benefits payable and recognizing those benefits ratably over the accumulation period based on total expected assessments. The reserve for such products recognizes the portion of contract assessments received in early years used to compensate the Company for benefits provided in later years. Assumptions used, such as the interest rate, lapse rate and mortality, are consistent with assumptions used in estimating gross profits for purposes of amortizing DAC. Reserves for UL and VUL secondary guarantees and paid-up guarantees are recorded in Future policy benefits and contract owner account balances on the Balance Sheets.

The Company also calculates a benefit ratio for each block of business that meets the requirements for additional reserves and calculates an additional reserve by accumulating amounts equal to the benefit ratio multiplied by the assessments for each period, reduced by excess benefits during the period. The additional reserve is accumulated at interest rates consistent with the DAC model for the period. The calculated reserve includes provisions for UL contracts that produce expected gains from the insurance benefit function followed by losses from that function in later years. Additional reserves are recorded in Future policy benefits and contract owner account balances on the Balance Sheets.

GMDB and GMIB: Reserves for annuity guaranteed minimum death benefits ("GMDB") and guaranteed minimum income benefits ("GMIB") are determined by estimating the value of expected benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments. Expected experience is based on a range of scenarios. Assumptions used, such as the long-term equity market return, lapse rate and mortality, are consistent with assumptions used in estimating gross profits for the purpose of amortizing DAC. The assumptions of investment performance and volatility are consistent with the historical experience of the appropriate underlying equity index, such as the Standard & Poor's ("S&P") 500 Index. In addition, the reserve for the GMIB incorporates assumptions for the likelihood and timing of the potential annuitizations that may be elected by the contract owner. In general, the Company assumes that GMIB annuitization rates will be higher for policies with more valuable ("in the money") guarantees, where the notional benefit amount is in excess of the account value. Reserves for GMDB and GMIB are recorded in Future policy benefits and contract owner account balances on the Balance Sheets. Changes in reserves for GMDB and GMIB are reported in Interest credited and other benefits to contract owners/policyholders in the Statements of Operations.

GMAB, GMWB, GMWBL and FIA: The Company issues certain products that contain embedded derivatives that are measured at estimated fair value separately from the host contracts. These products include annuity guaranteed minimum accumulation benefits ("GMAB"), guaranteed minimum withdrawal benefits without life contingencies ("GMWB"), guaranteed minimum withdrawal benefits with life contingent payouts ("GMWBL") and FIAs. Such embedded derivatives are recorded in Future policy benefits and contract owner account balances on the Balance Sheets, with changes in estimated fair value, that are not related to attributed fees or premiums collected or payments made, reported in Other net realized capital gains (losses) in the Statements of Operations.

At inception of the GMAB, GMWB and GMWBL contracts, the Company projects a fee to be attributed to the embedded derivative portion of the guarantee equal to the present value of projected future guaranteed benefits. After inception, the estimated fair value of the GMAB, GMWB and GMWBL contracts is determined based on the present value of projected future guaranteed benefits, minus the present value of projected attributed fees. A risk neutral valuation methodology is used under which the cash flows from the guarantees are projected under multiple capital market scenarios using observable risk free rates. The projection of future guaranteed benefits and future attributed fees require the use of assumptions for capital markets (e.g., implied volatilities, correlation among indices, risk-free swap curve, etc.) and policyholder behavior (e.g., lapse, benefit utilization, mortality, etc.).

The estimated fair value of the embedded derivative in the FIA contracts is based on the present value of the excess of interest payments to the contract owners over the growth in the minimum guaranteed contract value. The excess interest payments are determined as the excess of projected index driven benefits over the projected guaranteed benefits. The projection horizon is over the anticipated life of the related contracts, which takes into account best estimate actuarial assumptions, such as partial withdrawals, full surrenders, deaths, annuitizations and maturities.

The liabilities for the GMAB, GMWB, GMWBL and FIA embedded derivatives include a risk margin to capture uncertainties related to policyholder behavior assumptions. The margin represents additional compensation a market participant would require to assume these risks.

The discount rate used to determine the fair value of the liabilities for the GMAB, GMWB, GMWBL and FIA embedded derivatives includes an adjustment to reflect the risk that these obligations will not be fulfilled ("nonperformance risk").

Separate Accounts

Separate account assets and liabilities generally represent funds maintained to meet specific investment objectives of contract owners or participants who bear the investment risk, subject, in limited cases, to minimum guaranteed rates. Investment income and investment gains and losses generally accrue directly to such contract owners. The assets of each account are legally segregated and are not subject to claims that arise out of any other business of the Company or its affiliates.

Separate account assets supporting variable options under variable annuity contracts are invested, as designated by the contract owner or participant under a contract, in shares of mutual funds that are managed by the Company, or its affiliates, or in other selected mutual funds not managed by the Company, or its affiliates.

The Company reports separately, as assets and liabilities, investments held in the separate accounts and liabilities of separate accounts if:

- Such separate accounts are legally recognized;
- Assets supporting the contract liabilities are legally insulated from the Company's general account liabilities;
- Investments are directed by the contract owner or participant; and
- All investment performance, net of contract fees and assessments, is passed through to the contract owner.

The Company reports separate account assets that meet the above criteria at fair value on the Balance Sheets based on the fair value of the underlying investments. Separate account liabilities equal separate account assets. Investment income and net realized and unrealized capital gains (losses) of the separate accounts, however, are not reflected in the Statements of Operations, and the Statements of Cash Flows do not reflect investment activity of the separate accounts.

Long-term Debt

Long-term debt is on the Balance Sheets carried at an amount equal to the unpaid principal balance, net of any remaining unamortized discount or premium and direct and any incremental costs attributable to issuance. Direct and incremental costs to issue the debt are recorded in Other assets on the Balance Sheets. Discounts, premiums and direct and incremental costs are amortized as a component of Interest expense in the Statements of Operations over the life of the debt using the effective interest method of amortization.

Repurchase Agreements

The Company engages in dollar repurchase agreements with MBS ("dollar rolls") and repurchase agreements with other collateral types to increase its return on investments and improve liquidity. Such arrangements meet the requirements to be accounted for as financing arrangements.

The Company enters into dollar roll transactions by selling existing MBS and concurrently entering into an agreement to repurchase similar securities within a short time frame at a lower price. Under repurchase agreements, the Company borrows cash from a counterparty at an agreed upon interest rate for an agreed upon time frame and pledges collateral in the form of securities. At the end of the agreement, the counterparty returns the collateral to the Company, and the Company, in turn, repays the loan amount along with the additional agreed upon interest.

The Company's policy requires that at all times during the term of the dollar roll and repurchase agreements that cash or other collateral types obtained is sufficient to allow the Company to fund substantially all of the cost of purchasing replacement assets. Cash received is invested in Short-term investments, with the offsetting obligation to repay the loan included within Other liabilities on the Balance Sheets. The carrying value of the securities pledged in dollar rolls and repurchase agreement transactions and the related repurchase obligation are included in Securities pledged and Short-term debt, respectively, on the Balance Sheets.

The primary risk associated with short-term collateralized borrowings is that the counterparty will be unable to perform under the terms of the contract. The Company's exposure is limited to the excess of the net replacement cost of the securities over the value of the short-term investments. The Company believes the counterparties to the dollar rolls and repurchase agreements are financially responsible and that the counterparty risk is minimal.

Recognition of Insurance Revenue and Related Benefits

Premiums related to traditional life insurance contracts and payout contracts with life contingencies are recognized in Premiums in the Statements of Operations when due from the contract owner. When premiums are due over a significantly shorter period than the period over which benefits are provided, any gross premium in excess of the net premium (i.e., the portion of the gross premium required to provide for all expected future benefits and expenses) is deferred and recognized into revenue in a constant relationship to insurance in force. Benefits are recorded in Interest credited and other benefits to contract owners/policyholders in the Statements of Operations when incurred.

Amounts received as payment for investment-type, universal life-type, fixed annuities, payout contracts without life contingencies and FIA contracts are reported as deposits to contract owner account balances. Revenues from these contracts consist primarily of fees assessed against the contract owner account balance for mortality and policy administration charges and are reported in Fee income. Surrender charges are reported in Other revenue. In addition, the Company earns investment income from the investment of contract deposits in the Company's general account portfolio, which is reported in Net investment income in the Statements of Operations. Fees assessed that represent compensation to the Company for services to be provided in future periods and certain other fees are deferred and amortized into revenue over the expected life of the related contracts in proportion to estimated gross profits in a manner consistent with DAC for these contracts. Benefits and expenses for these products include claims in excess of related account balances, expenses of contract administration and interest credited to contract owner account balances.

Income Taxes

The Company uses certain assumptions and estimates in determining (a) the income taxes payable or refundable to/from Voya Financial, Inc. for the current year, (b) the deferred income tax liabilities and assets for items recognized differently in its Financial Statements from amounts shown on its income tax returns and (c) the federal income tax expense. Determining these amounts requires analysis and interpretation of current tax laws and regulations, including the loss limitation rules associated with change in control. Management exercises considerable judgment in evaluating the amount and timing of recognition of the resulting income tax liabilities and assets. These judgments and estimates are reevaluated on a periodic basis. The Company will continue to evaluate as regulatory and business factors change.

Items required by tax regulations to be included in the tax return may differ from the items reflected in the financial statements. As a result, the effective tax rate reflected in the financial statements may be different than the actual rate applied on the tax return. Some of these differences are permanent, such as the dividends received deduction which is estimated using information from the prior period and current year results. Other differences are temporary, reversing over time, such as the valuation of insurance reserves, and create deferred tax assets and liabilities.

The Company's deferred tax assets and liabilities resulting from temporary differences between financial reporting and tax bases of assets and liabilities are measured at the balance sheet date using enacted tax rates expected to apply to taxable income in the years the temporary differences are expected to reverse.

Deferred tax assets represent the tax benefit of future deductible temporary differences, net operating loss carryforwards and tax credit carryforwards. The Company evaluates and tests the recoverability of its deferred tax assets. Deferred tax assets are reduced by a valuation allowance if, based on the weight of evidence, it is more likely than not that some portion, or all, of the deferred tax assets will not be realized. Considerable judgment and the use of estimates are required in determining whether a valuation allowance is necessary and, if so, the amount of such valuation allowance. In evaluating the need for a valuation allowance, the Company considers many factors, including:

- The nature, frequency and severity of book income or losses in recent years;
- The nature and character of the deferred tax assets and liabilities;
- The recent cumulative book income (loss) position after adjustment for permanent differences;
- Taxable income in prior carryback years;
- Projected future taxable income, exclusive of reversing temporary differences and carryforwards;
- Projected future reversals of existing temporary differences;
- The length of time carryforwards can be utilized;
- Prudent and feasible tax planning strategies the Company would employ to avoid a tax benefit from expiring unused; and
- Tax rules that would impact the utilization of the deferred tax assets.

In establishing unrecognized tax benefits, the Company determines whether a tax position is more likely than not to be sustained under examination by the appropriate taxing authority. The Company also considers positions that have been reviewed and agreed to as part of an examination by the appropriate taxing authority. Tax positions that do not meet the more likely than not standard are not recognized in the Financial Statements. Tax positions that meet this standard are recognized in the Financial Statements. The Company measures the tax position as the largest amount of benefit that is greater than 50% likely of being realized upon ultimate resolution with the tax authority that has full knowledge of all relevant information.

Reinsurance

The Company utilizes reinsurance agreements in most aspects of its insurance business to reduce its exposure to large losses. Such reinsurance permits recovery of a portion of losses from reinsurers, although it does not discharge the primary liability of the Company as direct insurer of the risks reinsured.

For each of its reinsurance agreements, the Company determines whether the agreement provides indemnification against loss or liability relating to insurance risk. The Company reviews contractual features, particularly those that may limit the amount of insurance risk to which the reinsurer is subject or features that delay the timely reimbursement of claims. The assumptions used to account for both long and short-duration reinsurance agreements are consistent with those used for the underlying contracts. Ceded Future policy benefits and contract owner account balances are reported gross on the Balance Sheets.

Long-duration: For reinsurance of long-duration contracts that transfer significant insurance risk, the difference, if any, between the amounts paid and benefits received related to the underlying contracts is included in the expected net cost of reinsurance, which is recorded as a component of the reinsurance asset or liability. Any difference between actual and expected net cost of reinsurance is recognized in the current period and included as a component of profits used to amortize DAC.

Short-duration: For prospective reinsurance of short-duration contacts that meet the criteria for reinsurance accounting, amounts paid are recorded as ceded premiums and ceded unearned premiums and are reflected as a component of Premiums in the Statements

of Operations and Other assets on the Balance Sheets, respectively. Ceded unearned premiums are amortized through premiums over the remaining contract period in proportion to the amount of protection provided.

If the Company determines that a reinsurance agreement does not expose the reinsurer to a reasonable possibility of a significant loss from insurance risk, the Company records the agreement using the deposit method of accounting. Deposits received are included in Other liabilities, and deposits made are included in Deposits, premiums receivable and reinsurance recoverable on the Balance Sheets. As amounts are paid or received, consistent with the underlying contracts, the deposit assets or liabilities are adjusted. Interest on such deposits is recorded as Other revenues or Other expenses in the Statements of Operations, as appropriate. Periodically, the Company evaluates the adequacy of the expected payments or recoveries and adjusts the deposit asset or liability through Other revenues or Other expenses, as appropriate.

Accounting for reinsurance requires use of assumptions and estimates, particularly related to the future performance of the underlying business and the potential impact of counterparty credit risks. The Company periodically reviews actual and anticipated experience compared to the assumptions used to establish assets and liabilities relating to ceded and assumed reinsurance. The Company also evaluates the financial strength of potential reinsurers and continually monitors the financial condition of reinsurers.

Only those reinsurance recoverable balances deemed probable of recovery are recognized as assets on the Company's Balance Sheets and are stated net of allowances for uncollectible reinsurance. Amounts currently recoverable and payable under reinsurance agreements are included in Reinsurance recoverable and Other liabilities, respectively. Such assets and liabilities relating to reinsurance agreements with the same reinsurer are recorded net on the Balance Sheets if a right of offset exists within the reinsurance agreement. Premiums, Fee income and Interest credited and other benefits to contract owners/policyholders are reported net of reinsurance ceded. Amounts received from reinsurers for policy administration are reported in Other revenue.

The Company has entered into combined coinsurance and coinsurance funds withheld reinsurance arrangements that contain embedded derivatives for which carrying value is estimated based on the change in the fair value of the assets supporting the funds withheld payable under the agreements.

The Company currently has significant concentrations of ceded reinsurance with its affiliates, Security Life of Denver Insurance Company ("SLD") and Roaring River II, Inc. ("RRII"), primarily related to funding agreements and UL policies with respect to SLD and variable annuities with respect to RRII.

Participating Insurance

Participating business approximates 14.4% of the Company's ordinary life insurance in force and 30.0% of life insurance premium income. The amount of dividends to be paid is determined annually by the Board of Directors. Amounts allocable to participating contract owners are based on published dividend projections or expected dividend scales. Dividends to participating policyholders of $8.1 were incurred during the year ended December 31, 2016. Dividends to participating policyholders of $8.6, were incurred during the years ended December 31, 2015 and 2014.

Contingencies

A loss contingency is an existing condition, situation or set of circumstances involving uncertainty as to possible loss that will ultimately be resolved when one or more future events occur or fail to occur. Examples of loss contingencies include pending or threatened adverse litigation, threat of expropriation of assets and actual or possible claims and assessments. Amounts related to loss contingencies are accrued and recorded in Other liabilities on the Balance Sheets if it is probable that a loss has been incurred and the amount can be reasonably estimated, based on the Company's best estimate of the ultimate outcome.

Adoption of New Pronouncements

Short-Duration Contracts
In May 2015, the Financial Accounting Standards Board ("FASB") issued Accounting Standards Update ("ASU") 2015-09, "Financial Services - Insurance (Accounting Standards Codification ("ASC") Topic 944): Disclosures about Short-Duration Contracts" ("ASU 2015-09"), which requires insurance entities to disclose, for annual reporting periods, information about the liability for unpaid claims and claim adjustment expenses and about significant changes in methodologies and assumptions used to calculate the liability for unpaid claims and claims adjustment expenses. The standard also requires entities to disclose, for annual and interim reporting periods, a rollforward of the liability for unpaid claims and claim adjustment expenses.

The provisions of ASU 2015-09 were adopted, retrospectively, by the Company on December 15, 2016. The adoption had no effect on the Company's disclosures, as the Company's liabilities to which this guidance relates are not significant.

Derivative Contract Novations
In March 2016, the FASB issued ASU 2016-05, "Derivatives and Hedging (ASC Topic 815): Effect of Derivative Contract Novations on Existing Hedge Accounting Relationships" ("ASU 2016-05"), which clarifies that a change in the counterparty to a derivative instrument that has been designated as the hedging instrument under ASC Topic 815 does not, in and of itself, require dedesignation of that hedging relationship.

The provisions of ASU 2016-05 are effective for fiscal years, and for interim periods within those fiscal years, beginning after December 15, 2016 with early adoption permitted, using either a prospective or modified retrospective approach. The Company elected to early adopt ASU 2016-05 as of January 1, 2016 on a prospective basis. The adoption had no effect on the Company's financial condition, results of operations or cash flows.

Consolidation
In February 2015, the FASB issued ASU 2015-02, "Consolidation (ASC Topic 810): Amendments to the Consolidation Analysis" ("ASU 2015-02"), which:

- Modifies the evaluation of whether limited partnerships and similar legal entities are Variable Interest Entities ("VIEs") or Voting Interest Entities ("VOEs"), including the requirement to consider the rights of all equity holders at risk to determine if they have the power to direct the entity's most significant activities.
- Eliminates the presumption that a general partner should consolidate a limited partnership. Limited partnerships and similar entities will be VIEs unless the limited partners hold substantive kick-out rights in the participating rights.
- Affects the consolidation analysis of reporting entities that are involved with VIEs, particularly those that have fee arrangements and related party relationships.
- Provides a new scope exception for registered money market funds and similar unregistered money market funds, and ends the deferral granted to investment companies from applying the VIE guidance.

The Company adopted the provisions of ASU 2015-02 on January 1, 2016 using a modified retrospective approach. The adoption had no effect on the Company's financial condition or results of operations, but impacted disclosures only. Investments in limited partnerships previously accounted for as VOEs became VIEs under the new guidance as the limited partners do not hold substantive kick-out rights or participating rights. See *Variable Interest Entities* section of the *Investments* Note to these Financial Statements for additional information.

Hybrid Financial Instruments
In November 2014, the FASB issued ASU 2014-16, "Derivatives and Hedging (ASC Topic 815): Determining Whether the Host Contract in a Hybrid Financial Instrument Issued in the Form of a Share Is More Akin to Debt or to Equity" ("ASU 2014-16"), which requires an entity to determine the nature of the host contract by considering the economic characteristics and risks of the entire hybrid financial instrument, including all embedded derivative features.

The provisions of ASU 2014-16 were adopted by the Company on January 1, 2016. The adoption had no effect on the Company's financial condition, results of operations or cash flows.

Future Adoption of Accounting Pronouncements

Statement of Cash Flows
In August 2016, the FASB issued ASU 2016-15, "Statement of Cash Flows (ASC Topic 230): Classification of Certain Cash Receipts and Cash Payments" ("ASU 2016-15"), which addresses diversity in how certain cash receipts and cash payments are presented and classified in the statement of cash flows. The amendments provide guidance on eight specific cash flow issues.

The provisions of ASU 2016-15 are effective retrospectively for fiscal years beginning after December 15, 2017, including interim periods, with early adoption permitted. The Company is currently in the process of determining the impact of adoption of the provisions of ASU 2016-15.

Financial Instruments - Credit Losses
In June 2016, the FASB issued ASU 2016-13, "Financial Instruments-Credit Losses (ASC Topic 326): Measurement of Credit Losses on Financial Instruments" ("ASU 2016-13"), which:

- Introduces an approach based on expected losses to estimate credit losses on certain types of financial instruments,
- Modifies the impairment model for available-for-sale debt securities, and
- Provides a simplified accounting model for purchased financial assets with credit deterioration since their origination.

The provisions of ASU 2016-13 are effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2019, with early adoption permitted for fiscal years beginning after December 15, 2018. Initial adoption of ASU 2016-13 is required to be reported on a modified retrospective basis, with a cumulative-effect adjustment to retained earnings as of the beginning of the year of adoption, except for certain provisions that are required to be applied prospectively. The Company is currently in the process of determining the impact of adoption of the provisions of ASU 2016-13.

Debt Instruments
In March 2016, the FASB issued ASU 2016-06, "Derivatives and Hedging (ASC Topic 815): Contingent Put and Call Options in Debt Instruments" ("ASU 2016-06"), which clarifies that an entity is only required to follow the four-step decision sequence when assessing whether contingent call (put) options that can accelerate the payment of principal on debt instruments are clearly and closely related to their debt hosts for purposes of bifurcating an embedded derivative. The entity does not need to assess whether the event that triggers the ability to exercise a call (put) option is related to interest rates or credit risks.

The provisions of ASU 2016-06 are effective on a modified retrospective basis for fiscal years beginning after December 15, 2016, including interim periods, with early adoption permitted. The Company is currently in the process of determining the impact of adoption of the provisions of ASU 2016-06.

Financial Instruments - Recognition and Measurement
In January 2016, the FASB issued ASU 2016-01, "Financial Instruments-Overall (ASC Subtopic 825-10): Recognition and Measurement of Financial Assets and Financial Liabilities" ("ASU 2016-01"), which requires:

- Equity investments (except those consolidated or accounted for under the equity method) to be measured at fair value with changes in fair value recognized in net income.
- Elimination of the disclosure of methods and significant assumptions used to estimate the fair value for financial instruments measured at amortized cost.
- The use of the exit price notion when measuring the fair value of financial instruments for disclosure purposes.
- Separate presentation in other comprehensive income of the portion of the total change in fair value of a liability resulting from a change in own credit risk if the liability is measured at fair value under the fair value option.
- Separate presentation on the balance sheet or financial statement notes of financial assets and financial liabilities by measurement category and form of financial asset.

The provisions of ASU 2016-01 are effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2017, with early adoption only permitted for certain provisions. Initial adoption of ASU 2016-01 is required to be reported on a modified retrospective basis, with a cumulative-effect adjustment to the balance sheet as of the beginning of the year of adoption, except for certain provisions that are required to be applied prospectively. The Company is currently in the process of determining the impact of adoption of the provisions of ASU 2016-01.

Revenue from Contracts with Customers

In May 2014, the FASB issued ASU 2014-09, "Revenue from Contracts with Customers (ASC Topic 606)" ("ASU 2014-09"), which requires an entity to recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. Revenue is recognized when, or as, the entity satisfies a performance obligation under the contract. ASU 2014-09 also updated the accounting for certain costs associated with obtaining and fulfilling contracts with customers and requires disclosures regarding the nature, amount, timing and uncertainty of revenue and cash flows arising from contracts with customers. In addition, the FASB issued various amendments during 2016 to clarify the provisions and implementation guidance of ASU 2014-09. Revenue recognition for insurance contracts and financial instruments is explicitly scoped out of the guidance.

The provisions of ASU 2014-09 are effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2017, with early adoption permitted as of January 1, 2017. Initial adoption of ASU 2014-09 is required to be reported using either a retrospective or modified retrospective approach.

The Company plans to adopt ASU 2014-09 on January 1, 2018. As the scope of ASU 2014-09 excludes insurance contracts and financial instruments, the guidance does not apply to a significant portion of the Company’s business. Consequently, the Company does not currently expect the adoption of this guidance to have a material impact; however, implementation efforts, including assessment of transition approach, are ongoing.

2. Investments

Fixed Maturities and Equity Securities

Available-for-sale and FVO fixed maturities and equity securities were as follows as of December 31, 2016:

	Amortized Cost	Gross Unrealized Capital Gains	Gross Unrealized Capital Losses	Embedded Derivatives[2]	Fair Value	OTTI[3][4]
Fixed maturities:						
U.S. Treasuries	$ 946.4	$ 45.0	$ 8.5	$ -	$ 982.9	$ -
U.S. Government agencies and authorities	29.4	3.6	-	-	33.0	-
State, municipalities and political subdivisions	500.1	8.3	11.0	-	497.4	-
U.S. corporate public securities	9,992.8	509.9	58.0	-	10,444.7	4.0
U.S. corporate private securities	2,753.6	73.4	49.4	-	2,777.6	-
Foreign corporate public securities and foreign governments [1]	2,620.2	99.5	30.6	-	2,689.1	-
Foreign corporate private securities [1]	2,734.6	103.9	23.1	-	2,815.4	-
Residential mortgage-backed securities:						
Agency	1,375.6	61.5	13.2	11.0	1,434.9	-
Non-Agency	271.4	41.1	2.3	4.6	314.8	11.0
Total Residential mortgage-backed securities	1,647.0	102.6	15.5	15.6	1,749.7	11.0

Equity securities	15.4	3.8	-	-	19.2	-
Total fixed maturities and equity securities investments	$ 22,632.4	$ 829.2	$ 457.7	$ 21.1	$ 23,025.0	$ 24.3

[1] Primarily U.S. dollar denominated.
[2] Embedded derivatives within fixed maturity securities are reported with the host investment. The changes in fair value of embedded derivatives are reported in Other net realized capital gains (losses) in the Statements of Operations.
[3] Represents OTTI reported as a component of Other comprehensive income (loss).
[4] Amount excludes $180.3 of net unrealized gains on impaired available-for-sale securities.

The amortized cost and fair value of fixed maturities, including securities pledged, as of December 31, 2016, are shown below by contractual maturity. Actual maturities may differ from contractual maturities as securities may be restructured, called or prepaid. MBS and Other ABS are shown separately because they are not due at a single maturity date.

	Amortized Cost	Fair Value
Due to mature:		
One year or less	$ 977.5	$ 978.6
After one year through five years	4,778.4	4,977.2
After five years through ten years	8,053.5	8,171.5
After ten years	5,767.7	6,112.8
Mortgage-backed securities	2,598.2	2,706.8
Other asset-backed securities	317.8	322.6
Fixed maturities, including securities pledged	$ 22,493.1	$ 23,269.5

The investment portfolio is monitored to maintain a diversified portfolio on an ongoing basis. Credit risk is mitigated by monitoring concentrations by issuer, sector and geographic stratification and limiting exposure to any one issuer.

As of December 31, 2016 and 2015, the Company did not have any investments in a single issuer, other than obligations of the U.S. Government and government agencies, with a carrying value in excess of 10% of the Company's Shareholder's equity.

The following tables set forth the composition of the U.S. and foreign corporate securities within the fixed maturity portfolio by industry category as of the dates indicated:

	Amortized Cost	Gross Unrealized Capital Gains	Gross Unrealized Capital Losses	Fair Value
December 31, 2016				
Communications	$ 1,070.3	$ 83.7	$ 4.4	$ 1,149.6
Financial	2,917.6	115.6	18.2	3,015.0
Industrial and other companies	8,692.2	342.7	70.7	8,964.2
Energy	1,809.2	85.5	20.5	1,874.2
Utilities	2,642.1	125.4	32.8	2,734.7
Transportation	600.3	24.2	5.9	618.6
Total	$ 17,731.7	$ 777.1	$ 152.5	$ 18,356.3
December 31, 2015				
Communications	$ 1,147.2	$ 64.9	$ 17.9	$ 1,194.2
Financial	2,798.2	108.8	22.1	2,884.9
Industrial and other companies	8,778.0	282.1	165.9	8,894.2
Energy	2,357.3	32.2	175.9	2,213.6
Utilities	2,500.6	113.6	31.2	2,583.0
Transportation	571.8	17.0	13.8	575.0
Total	$ 18,153.1	$ 618.6	$ 426.8	$ 18,344.9

Fixed Maturities and Equity Securities

The Company's fixed maturities and equity securities are currently designated as available-for-sale, except those accounted for using the FVO. Available-for-sale securities are reported at fair value and unrealized capital gains (losses) on these securities are recorded directly in AOCI and presented net of related changes in DAC, VOBA and Deferred income taxes. In addition, certain fixed maturities have embedded derivatives, which are reported with the host contract on the Balance Sheets.

The Company has elected the FVO for certain of its fixed maturities to better match the measurement of assets and liabilities in the Statements of Operations. Certain CMOs, primarily interest-only and principal-only strips, are accounted for as hybrid instruments and valued at fair value with changes in the fair value recorded in Other net realized capital gains (losses) in the Statements of Operations.

The Company invests in various categories of CMOs, including CMOs that are not agency-backed, that are subject to different degrees of risk from changes in interest rates and defaults. The principal risks inherent in holding CMOs are prepayment and extension risks related to significant decreases and increases in interest rates resulting in the prepayment of principal from the underlying mortgages, either earlier or later than originally anticipated. As of December 31, 2016 and 2015, approximately 53.8% and 46.6%, respectively, of the Company's CMO holdings, were invested in the above mentioned types of CMOs such as interest-only or principal-only strips, that are subject to more prepayment and extension risk than traditional CMOs.

Public corporate fixed maturity securities are distinguished from private corporate fixed maturity securities based upon the manner in which they are transacted. Public corporate fixed maturity securities are issued initially through market intermediaries on a registered basis or pursuant to Rule 144A under the Securities Act of 1933 (the "Securities Act") and are traded on the secondary market through brokers acting as principal. Private corporate fixed maturity securities are originally issued by borrowers directly to investors pursuant to Section 4(a)(2) of the Securities Act, and are traded in the secondary market directly with counterparties, either without the participation of a broker or in agency transactions.

Repurchase Agreements

As of December 31, 2016 and 2015, the Company did not have any securities pledged in dollar rolls, repurchase agreement transactions or reverse repurchase agreements.

Securities Lending

As of December 31, 2016 and 2015, the fair value of loaned securities was $270.9 and $147.9, respectively, and is included in Securities pledged on the Balance Sheets. As of December 31, 2016 and 2015, cash collateral retained by the lending agent and invested in short-term liquid assets on the Company's behalf was $111.0 and $153.6, respectively, and is recorded in Short-term investments under securities loan agreements, including collateral delivered on the Balance Sheets. As of December 31, 2016 and 2015, liabilities to return collateral of $111.0 and $153.6, respectively, are included in Payables under securities loan agreements, including collateral held on the Balance Sheets.

During the first quarter of 2016 under an amendment to the securities lending program, the Company began accepting non-cash collateral in the form of securities. The securities retained as collateral by the lending agent may not be sold or re-pledged, except in the event of default, and are not reflected in the Company’s Balance Sheets. This collateral generally consists of U.S. Treasury, U.S. Government agency securities and MBS pools. As of December 31, 2016, the fair value of securities retained as collateral by the lending agent on the Company’s behalf was $168.2. As of December 31, 2015, the Company did not retain any securities as collateral.

The following table sets forth borrowings under securities lending transactions by class of collateral pledged for the dates indicated:

	December 31, 2016[1]	December 31, 2015
U.S. Treasuries	$ 62.4	$ -
U.S. corporate public securities	174.3	73.5
Foreign corporate public securities and foreign governments	42.5	80.1
Payables under securities loan agreements	$ 279.2	$ 153.6

[1] Borrowings under securities lending transactions include both cash and non-cash collateral of $111.0 and $168.2, respectively.

The Company's securities lending activities are conducted on an overnight basis, and all securities loaned can be recalled at any time. The Company does not offset assets and liabilities associated with its securities lending program.

Variable Interest Entities

The Company holds certain VIEs for investment purposes. VIEs may be in the form of private placement securities, structured securities, securitization transactions, or limited partnerships. The Company has reviewed each of its holdings and determined that consolidation of these investments in the Company's financial statements is not required, as the Company is not the primary beneficiary, because the Company does not have both the power to direct the activities that most significantly impact the entity's economic performance and the obligation or right to potentially significant losses or benefits, for any of its investments in VIEs. The Company did not provide any non-contractual financial support and its carrying value represents the Company's exposure to loss. The carrying value of the investments in VIEs was $227.4 and $1.2 as of December 31, 2016 and 2015, respectively; these investments are included in Limited partnerships/corporations on the Balance Sheets. Income and losses recognized on these investments are reported in Net investment income in the Statements of Operations.

Securitizations

The Company invests in various tranches of securitization entities, including RMBS, CMBS and ABS. Through its investments, the Company is not obligated to provide any financial or other support to these entities. Each of the RMBS, CMBS and ABS entities are thinly capitalized by design and considered VIEs. The Company's involvement with these entities is limited to that of a passive investor. The Company has no unilateral right to appoint or remove the servicer, special servicer or investment manager, which are generally viewed to have the power to direct the activities that most significantly impact the securitization entities' economic performance, in any of these entities, nor does the Company function in any of these roles. The Company, through its investments or other arrangements, does not have the obligation to absorb losses or the right to receive benefits from the entity that could potentially be significant to the entity. Therefore, the Company is not the primary beneficiary and will not consolidate any of the RMBS, CMBS and ABS entities in which it holds investments. These investments are accounted for as investments available-for-sale as described in the *Business, Basis of Presentation and Significant Accounting Policies* Note to these Financial Statements and unrealized capital gains (losses) on these securities are recorded directly in AOCI, except for certain RMBS which are accounted for under the FVO for which changes in fair value are reflected in Other net realized gains (losses) in the Statements of Operations. The Company's maximum exposure to loss on these structured investments is limited to the amount of its investment.

Unrealized Capital Losses

Unrealized capital losses (including noncredit impairments), along with the fair value of fixed maturity securities, including securities pledged, by market sector and duration were as follows as of December 31, 2016:

	Six Months or Less Below Amortized Cost		More Than Six Months and Twelve Months or Less Below Amortized Cost		More Than Twelve Months Below Amortized Cost		Total	
	Fair Value	Unrealized Capital Losses	Fair Value	Unrealized Capital Losses	Fair Value	Unrealized Capital Losses	Fair Value	Unrealized Capital Losses
U.S. Treasuries	$ 455.0	$ 8.5	$ -	$ -	$ -	$ -	$ 455.0	$ 8.5
U.S. Government agencies and authorities	-	-	-	-	-	-	-	-
State, municipalities and political subdivisions	269.3	9.5	-	-	11.7	1.5	281.0	11.0
U.S. corporate public securities	1,931.7	43.0	23.9	1.2	171.2	13.8	2,126.8	58.0

Investments with fair values less than amortized cost are included in the Company's other-than-temporary impairments analysis. Impairments were recognized as disclosed in the "Evaluating Securities for Other-Than-Temporary Impairments" section below. The Company evaluates non-agency RMBS and ABS for "other-than-temporary impairments" each quarter based on actual and projected cash flows, after considering the quality and updated loan-to-value ratios reflecting current home prices of underlying collateral, forecasted loss severity, the payment priority within the tranche structure of the security and amount of any credit enhancements. The Company's assessment of current levels of cash flows compared to estimated cash flows at the time the securities were acquired (typically pre-2008) indicates the amount and the pace of projected cash flows from the underlying collateral has generally been lower and slower, respectively. However, since cash flows are typically projected at a trust level, the impairment review incorporates the security's position within the trust structure as well as credit enhancement remaining in the trust to determine whether an impairment is warranted. Therefore, while lower and slower cash flows will impact the trust, the effect on the valuation of a particular security within the trust will also be dependent upon the trust structure. Where the assessment continues to project full recovery of principal and interest on schedule, the Company has not recorded an impairment. Based on this analysis, the Company determined that the remaining investments in an unrealized loss position were not other-than-temporarily impaired and therefore no further other-than-temporary impairment was necessary.

Troubled Debt Restructuring

The Company invests in high quality, well performing portfolios of commercial mortgage loans and private placements. Under certain circumstances, modifications are granted to these contracts. Each modification is evaluated as to whether a troubled debt restructuring has occurred. A modification is a troubled debt restructuring when the borrower is in financial difficulty and the creditor makes concessions. Generally, the types of concessions may include reducing the face amount or maturity amount of the debt as originally stated, reducing the contractual interest rate, extending the maturity date at an interest rate lower than current market interest rates and/or reducing accrued interest. The Company considers the amount, timing and extent of the concession granted in determining any impairment or changes in the specific valuation allowance recorded in connection with the troubled debt restructuring. A valuation allowance may have been recorded prior to the quarter when the loan is modified in a troubled debt restructuring. Accordingly, the carrying value (net of the specific valuation allowance) before and after modification through a troubled debt restructuring may not change significantly, or may increase if the expected recovery is higher than the pre-modification recovery assessment. For the years ended December 31, 2016 and 2015, the Company had no new troubled debt restructurings for private placement bonds or commercial mortgage loans.

As of December 31, 2016, the Company held no commercial mortgage troubled debt restructured loans.

As of December 31, 2016 and 2015, the Company did not have any commercial mortgage loans or private placements modified in a troubled debt restructuring with a subsequent payment default.

Mortgage Loans on Real Estate

The Company's mortgage loans on real estate are all commercial mortgage loans held for investment, which are reported at amortized cost, less impairment write-downs and allowance for losses. The Company diversifies its commercial mortgage loan portfolio by geographic region and property type to reduce concentration risk. The Company manages risk when originating commercial mortgage loans by generally lending only up to 75% of the estimated fair value of the underlying real estate. Subsequently, the Company continuously evaluates mortgage loans based on relevant current information including a review of loan-specific credit quality, property characteristics and market trends. Loan performance is monitored on a loan specific basis through the review of submitted appraisals, operating statements, rent revenues and annual inspection reports, among other items. This review ensures properties are performing at a consistent and acceptable level to secure the debt. The components to evaluate debt service coverage are received and reviewed at least annually to determine the level of risk.

The following table summarizes the Company's investment in mortgage loans as of the dates indicated:

	December 31, 2016			December 31, 2015		
	Impaired	Non Impaired	Total	Impaired	Non Impaired	Total
Commercial mortgage loans	$ -	$ 3,882.5	$ 3,882.5	$ 3.7	$ 3,308.2	$ 3,311.9
Collective valuation allowance for losses	N/A	(1.0)	(1.0)	N/A	(1.0)	(1.0)
Total net commercial mortgage loans	$ -	$ 3,881.5	$ 3,881.5	$ 3.7	$ 3,307.2	$ 3,310.9

N/A - Not Applicable

There were no impairments taken on the mortgage loan portfolio for the years ended December 31, 2016 and 2015.

The following table summarizes the activity in the allowance for losses for commercial mortgage loans for the periods indicated:

	December 31, 2016	December 31, 2015
Collective valuation allowance for losses, balance at January 1	$ 1.0	$ 0.8
Addition to (reduction of) allowance for losses	-	0.2
Collective valuation allowance for losses, end of period	$ 1.0	$ 1.0

The carrying values and unpaid principal balances of impaired mortgage loans were as follows as of the dates indicated:

	December 31, 2016	December 31, 2015
Impaired loans without allowances for losses	$ -	$ 3.7
Less: Allowances for losses on impaired loans	-	-
Impaired loans, net	$ -	$ 3.7
Unpaid principal balance of impaired loans	$ -	$ 3.7

The following table presents information on restructured loans as of the dates indicated:

	December 31, 2016	December 31, 2015
Troubled debt restructured loans	$ -	$ 3.7

The Company defines delinquent mortgage loans consistent with industry practice as 60 days past due. The Company's policy is to recognize interest income until a loan becomes 90 days delinquent or foreclosure proceedings are commenced, at which point interest accrual is discontinued. Interest accrual is not resumed until the loan is brought current.

There were no mortgage loans in the Company's portfolio in process of foreclosure as of December 31, 2016 and 2015.

There were no loans 30 days or less in arrears, with respect to principal and interest as of December 31, 2016. There were two loans 30 days or less in arrears, with respect to principal and interest as of December 31, 2015, with a total amortized cost of $2.1.

Commercial loans are placed on non-accrual status when 90 days in arrears if the Company has concerns regarding the collectability of future payments, or if a loan has matured without being paid off or extended. Factors considered may include conversations with the borrower, loss of major tenant, bankruptcy of borrower or major tenant, decreased property cash flow, number of days past due, or various other circumstances. Based on an assessment as to the collectability of the principal, a determination is made to either apply against the book value or apply according to the contractual terms of the loan. Funds recovered in excess of book value would then be applied to recover expenses, impairments, and then interest. Accrual of interest resumes after factors resulting in doubts about collectability have improved.

The following table presents information on the average investment during the period in impaired loans and interest income recognized on impaired and troubled debt restructured loans for the periods indicated:

	Year Ended December 31,		
	2016	2015	2014
Impaired loans, average investment during the period (amortized cost) [1]	$ 1.8	$ 10.4	$ 20.2
Interest income recognized on impaired loans, on an accrual basis [1]	-	0.5	1.1
Interest income recognized on impaired loans, on a cash basis [1]	-	0.6	1.0
Interest income recognized on troubled debt restructured loans, on an accrual basis	-	0.5	1.1

[1] Includes amounts for Troubled debt restructured loans.

Loan-to-value ("LTV") and debt service coverage ("DSC") ratios are measures commonly used to assess the risk and quality of mortgage loans. The LTV ratio, calculated at time of origination, is expressed as a percentage of the amount of the loan relative to the value of the underlying property. A LTV ratio in excess of 100% indicates the unpaid loan amount exceeds the underlying collateral. The DSC ratio, based upon the most recently received financial statements, is expressed as a percentage of the amount of a property's net income to its debt service payments. A DSC ratio of less than 1.0 indicates that a property's operations do not generate sufficient income to cover debt payments. These ratios are utilized as part of the review process described above.

The following table presents the LTV ratios as of the dates indicated:

	December 31, 2016[1]	December 31, 2015[1]
Loan-to-Value Ratio:		
0% - 50%	$ 428.7	$ 399.9
>50% - 60%	1,010.8	927.9
>60% - 70%	2,104.1	1,772.0
>70% - 80%	334.7	207.0
>80% and above	4.2	5.1

Total Commercial mortgage loans	$ 3,882.5	$ 3,311.9

[1] Balances do not include collective valuation allowance for losses.

Evaluating Securities for Other-Than-Temporary Impairments

The Company performs a regular evaluation, on a security-by-security basis, of its available-for-sale securities holdings, including fixed maturity securities and equity securities in accordance with its impairment policy in order to evaluate whether such investments are other-than-temporarily impaired.

The following table identifies the Company's credit-related and intent-related impairments included in the Statements of Operations, excluding impairments included in Other comprehensive income (loss) by type for the periods indicated:

	Year Ended December 31,					
	2016		2015		2014	
	Impairment	No. of Securities	Impairment	No. of Securities	Impairment	No. of Securities
U.S. corporate public securities	$ 1.9	2	$ 11.0	10	$ 1.4	2
Foreign corporate public securities and foreign governments [1]	2.6	2	18.2	6	0.6	4
Foreign corporate private securities [1]	1.5	2	0.5	1	-	-
Residential mortgage-backed	3.9	32	2.7	27	2.8	39
Commercial mortgage-backed	0.1	1	0.4	2	0.1	2
Other asset-backed	- *	2	-	-	0.5	2
Equity	-	-	- *	1	0.3	2
Total	$ 10.0	41	$ 32.8	47	$ 5.7	51

[1] Primarily U.S. dollar denominated.
* Less than $0.1.

The above tables include $5.3, $7.3 and $3.7 of write-downs related to credit impairments for the years ended December 31, 2016, 2015 and 2014, respectively, in Other-than-temporary impairments, which are recognized in the Statements of Operations. The remaining $4.7, $25.5 and $2.0, for the years ended December 31, 2016, 2015 and 2014, respectively, are related to intent impairments.

The following table summarizes these intent impairments, which are also recognized in earnings, by type for the periods indicated:

	Year Ended December 31,					
	2016		2015		2014	
	Impairment	No. of Securities	Impairment	No. of Securities	Impairment	No. of Securities
U.S. corporate public securities	$ 1.7	1	$ 11.0	9	$ 1.2	2
Foreign corporate public securities and foreign governments [1]	1.8	1	14.0	5	0.6	4
Foreign corporate private securities [1]	-	-	-	-	-	-
Residential mortgage-backed	1.1	3	0.1	4	0.1	5
Commercial mortgage-backed	0.1	1	0.4	2	0.1	2
Other asset-backed	-	-	-	-	-	-
Equity	-	-	-	-	-	-
Total	$ 4.7	6	$ 25.5	20	$ 2.0	13

[1] Primarily U.S. dollar denominated.

The Company may sell securities during the period in which fair value has declined below amortized cost for fixed maturities or cost for equity securities. In certain situations, new factors, including changes in the business environment, can change the Company's previous intent to continue holding a security. Accordingly, these factors may lead the Company to record additional intent related capital losses.

The following table identifies the amount of credit impairments on fixed maturities for which a portion of the OTTI loss was recognized in Other comprehensive income (loss) and the corresponding changes in such amounts for the periods indicated:

	Year Ended December 31,		
	2016	2015	2014
Balance at January 1	$ 27.2	$ 33.1	$ 42.1
Additional credit impairments:			
On securities not previously impaired	-	-	0.4
On securities previously impaired	2.6	1.8	3.0
Reductions:			
Increase in cash flows	0.4	0.4	0.5
Securities sold, matured, prepaid or paid down	9.2	7.3	11.9
Balance at December 31	$ 20.2	$ 27.2	$ 33.1

Net Investment Income

The following table summarizes Net investment income for the periods indicated:

	Year Ended December 31,		
	2016	**2015**	**2014**
Fixed maturities	$ 1,205.2	$ 1,169.5	$ 1,121.7
Equity securities, available-for-sale	2.8	2.1	2.4
Mortgage loans on real estate	176.3	165.0	145.6
Policy loans	5.1	4.7	5.0
Short-term investments and cash equivalents	-	0.3	0.8
Other	33.3	18.3	39.9
Gross investment income	1,422.7	1,359.9	1,315.4
Less: investment expenses	60.2	54.4	50.7
Net investment income	$ 1,362.5	$ 1,305.5	$ 1,264.7

As of December 31, 2016 and 2015, the Company had $6.3 and $1.7, respectively, of investments in fixed maturities that did not produce net investment income. Fixed maturities are moved to a non-accrual status when the investment defaults.

Interest income on fixed maturities is recorded when earned using an effective yield method, giving effect to amortization of premiums and accretion of discounts. Such interest income is recorded in Net investment income in the Statements of Operations.

Net Realized Capital Gains (Losses)

Net realized capital gains (losses) comprise the difference between the amortized cost of investments and proceeds from sale and redemption, as well as losses incurred due to the credit-related and intent-related other-than-temporary impairment of investments. Realized investment gains and losses are also primarily generated from changes in fair value of embedded derivatives within products and fixed maturities, changes in fair value of fixed maturities recorded at FVO and changes in fair value including accruals on derivative instruments, except for effective cash flow hedges. The cost of the investments on disposal is generally determined based on FIFO methodology.

Net realized capital gains (losses) were as follows for the periods indicated:

	Year Ended December 31,		
	2016	**2015**	**2014**
Fixed maturities, available-for-sale, including securities pledged	$ 9.9	$ (37.5)	$ 2.4
Fixed maturities, at fair value option	(137.6)	(98.0)	(50.0)
Equity securities, available-for-sale	0.1	-	(0.1)
Derivatives	(1,075.9)	(86.8)	(33.8)
Embedded derivatives - fixed maturities	(5.6)	(5.0)	(2.7)
Guaranteed benefit derivatives	324.2	95.8	(708.4)
Other investments	-	(0.1)	18.5
Net realized capital gains (losses)	$ (884.9)	$ (131.6)	$ (774.1)
After-tax net realized capital gains (losses)	$ (575.2)	$ (85.6)	$ (503.2)

Proceeds from the sale of fixed maturities and equity securities, available-for-sale and the related gross realized gains and losses, before tax, were as follows for the periods indicated:

	Year Ended December 31,		
	2016	2015	2014
Proceeds on sales	$ 3,021.3	$ 1,700.4	$ 2,436.1
Gross gains	75.5	24.7	21.9
Gross losses	64.0	35.6	26.3

3. Derivative Financial Instruments

The Company enters into the following types of derivatives:

Interest rate swaps and floors: Interest rate swaps are used by the Company primarily to reduce market risks from changes in interest rates and to alter interest rate exposure arising from mismatches between assets and/or liabilities. Interest rate swaps are also used to hedge the interest rate risk associated with the value of assets it owns or in an anticipation of acquiring them. Using interest rate swaps, the Company agrees with another party to exchange, at specified intervals, the difference between fixed rate and floating rate interest payments, calculated by reference to an agreed upon notional principal amount. These transactions are entered into pursuant to master agreements that provide for a single net payment to be made to/from the counterparty at each due date. The Company uses interest rate floor contracts to hedge interest rate exposure if rates decrease below a specified level. The Company utilizes these contracts in qualifying hedging relationships as well as non-qualifying hedging relationships.

Foreign exchange swaps: The Company uses foreign exchange or currency swaps to reduce the risk of change in the value, yield or cash flows associated with certain foreign denominated invested assets. Foreign exchange swaps represent contracts that require the exchange of foreign currency cash flows against U.S. dollar cash flows at regular periods, typically quarterly or semi-annually. The Company utilizes these contracts in qualifying hedging relationships as well as non-qualifying hedging relationships.

Credit default swaps: Credit default swaps are used to reduce credit loss exposure with respect to certain assets that the Company owns or to assume credit exposure on certain assets that the Company does not own. Payments are made to or received from the counterparty at specified intervals. In the event of a default on the underlying credit exposure, the Company will either receive a payment (purchased credit protection) or will be required to make a payment (sold credit protection) equal to the par minus recovery value of the swap contract. Credit default swaps are also used to hedge credit exposure associated with certain variable annuity guarantees. The Company utilizes these contracts in non-qualifying hedging relationships.

Total return swaps: The Company uses total return swaps as a hedge against a decrease in variable annuity account values, which are invested in certain indices. Using total return swaps, the Company agrees with another party to exchange, at specified intervals, the difference between the economic risk and reward of assets or a market index and the LIBOR rate, calculated by reference to an agreed upon notional principal amount. No cash is exchanged at the onset of the contracts. Cash is paid and received over the life of the contract based upon the terms of the swaps. The Company utilizes these contracts in non-qualifying hedging relationships.

Currency forwards: The Company uses currency forward contracts to hedge policyholder liabilities associated with the variable annuity contracts which are linked to foreign indices. The currency fluctuations may result in a decrease in account values, which would increase the possibility of the Company incurring an expense for guaranteed benefits in excess of account values. The Company also utilizes currency forward contracts to hedge currency exposure related to invested assets. The Company utilizes these contracts in non-qualifying hedging relationships.

Futures: Futures contracts are used to hedge against a decrease in certain equity indices. Such decreases may result in a decrease in variable annuity account values which would increase the possibility of the Company incurring an expense for guaranteed benefits in excess of account values. The Company also uses interest rate futures contracts to hedge its exposure to market risks due to changes in interest rates. The Company enters into exchange traded futures with regulated futures commissions that are members of the exchange. The Company also posts initial and variation margins with the exchange on a daily basis. The Company utilizes exchange-traded futures in non-qualifying hedging relationships. The Company also used futures contracts as a hedge against an increase in certain equity indices. Such increases may result in increased payments to the holders of fixed index annuity ("FIA") contracts. During the first quarter of 2016, the Company moved to a static hedging strategy for its FIA contracts and replaced futures contracts with equity options.

Swaptions: A swaption is an option to enter into a swap with a forward starting effective date. The Company uses swaptions to hedge the interest rate exposure associated with the minimum crediting rate and book value guarantees embedded in the retirement products that the Company offers. Increases in interest rates will generate losses on assets that are backing such liabilities. In certain instances, the Company locks in the economic impact of existing purchased swaptions by entering into offsetting written swaptions. The Company pays a premium when it purchases the swaption. The Company utilizes these contracts in non-qualifying hedging relationships.

Options: The Company uses options to manage the equity, interest rate and equity volatility risk of the economic liabilities associated with certain variable annuity minimum guaranteed benefits and/or to mitigate certain rebalancing costs resulting from increased volatility. The Company also uses equity options to hedge against an increase in various equity indices, and interest rate options to hedge against an increase in the interest rate benchmarked crediting strategies within FIA contracts. Such increases may result in increased payments to the holders of the FIA contracts. The Company pays an upfront premium to purchase these options. The Company utilizes these options in non-qualifying hedging relationships.

Variance swaps: The Company uses variance swaps to manage equity volatility risk on the economic liabilities associated with certain minimum guaranteed living benefits and/or to mitigate certain rebalancing costs resulting from increased volatility. An increase in the equity volatility results in higher valuations of such liabilities. In an equity variance swap, the Company agrees with another party to exchange amounts in the future, based on the changes in equity volatility over a defined period. The Company utilizes equity variance swaps in non-qualifying hedging relationships.

Embedded derivatives: The Company also invests in certain fixed maturity instruments and has issued certain products that contain embedded derivatives for which market value is at least partially determined by, among other things, levels of or changes in domestic and/or foreign interest rates (short-term or long-term), exchange rates, prepayment rates, equity rates, or credit ratings/spreads. In addition, the Company has entered into coinsurance with funds withheld arrangements, which contain embedded derivatives.

The Company's use of derivatives is limited mainly to economic hedging to reduce the Company's exposure to cash flow variability of assets and liabilities, interest rate risk, credit risk, exchange rate risk and equity market risk. It is the Company's policy not to offset amounts recognized for derivative instruments and amounts recognized for the right to reclaim cash collateral or the obligation to return cash collateral arising from derivative instruments executed with the same counterparty under a master netting arrangement, which provides the Company with the legal right of offset.

The notional amounts and fair values of derivatives were as follows as of the dates indicated:

	December 31, 2016			December 31, 2015		
	Notional Amount	Asset Fair Value	Liability Fair Value	Notional Amount	Asset Fair Value	Liability Fair Value
Derivatives: Qualifying for hedge accounting[1]						
Cash flow hedges:						
Interest rate contracts	$ 18.2	$ 0.3	$ 0.1	$ 18.2	$ 0.5	$ -
Foreign exchange contracts	161.6	13.1	3.7	57.1	11.7	-
Fair value hedges:						
Interest rate contracts	-	-	-	295.1	0.8	5.9
Derivatives: Non-qualifying for hedge accounting[1]						
Interest rate contracts	38,839.9	530.2	112.5	27,139.0	529.5	114.9
Foreign exchange contracts	1,222.1	33.3	12.8	967.0	30.9	12.3

Within reinsurance agreements	N/A	(5.9)	145.5	N/A	(15.6)	10.2
Total		$ 988.5	$ 3,824.9		$ 804.9	$ 3,842.9

[1] Open derivative contracts are reported as Derivatives assets or liabilities on the Balance Sheets at fair value.
N/A - Not Applicable

Based on the notional amounts, a substantial portion of the Company's derivative positions was not designated or did not qualify for hedge accounting as part of a hedging relationship as of December 31, 2016 and 2015. The Company utilizes derivative contracts mainly to hedge exposure to variability in cash flows, interest rate risk, credit risk, foreign exchange risk and equity market risk. The majority of derivatives used by the Company are designated as product hedges, which hedge the exposure arising from insurance liabilities or guarantees embedded in the contracts the Company offers through various product lines. These derivatives do not qualify for hedge accounting as they do not meet the criteria of being "highly effective" as outlined in ASC Topic 815, but do provide an economic hedge, which is in line with the Company's risk management objectives. The Company also uses derivatives contracts to hedge its exposure to various risks associated with the investment portfolio. The Company does not seek hedge accounting treatment for certain of these derivatives as they generally do not qualify for hedge accounting due to the criteria required under the portfolio hedging rules outlined in ASC Topic 815. The Company also uses credit default swaps coupled with other investments in order to produce the investment characteristics of otherwise permissible investments that do not qualify as effective accounting hedges under ASC Topic 815.

Although the Company has not elected to net its derivative exposures, the notional amounts and fair values of Over-The-Counter ("OTC") and cleared derivatives excluding exchange traded contracts and forward contracts (To Be Announced mortgage-backed securities) are presented in the tables below as of the dates indicated:

	December 31, 2016		
	Notional Amount	**Asset Fair Value**	**Liability Fair Value**
Credit contracts	$ 204.0	$ 2.6	$ 0.2
Equity contracts	21,545.3	377.0	49.3
Foreign exchange contracts	1,383.7	46.4	16.5
Interest rate contracts	35,454.4	530.5	112.1
		956.5	178.1
Counterparty netting[1]		(162.3)	(162.3)
Cash collateral netting[1]		(685.5)	(14.9)
Securities collateral netting[1]		(52.1)	-
Net receivables/payables		$ 56.6	$ 0.9

[1] Represents the netting of receivable balances with payable balances, net of collateral, for the same counterparty under eligible netting agreements.

	December 31, 2015		
	Notional Amount	**Asset Fair Value**	**Liability Fair Value**
Credit contracts	$ 1,230.0	$ 2.3	$ 5.9
Equity contracts	11,528.3	167.5	53.9
Foreign exchange contracts	1,024.1	42.6	12.3
Interest rate contracts	24,030.4	530.8	120.1
		743.2	192.2
Counterparty netting[1]		(184.6)	(184.6)
Cash collateral netting[1]		(427.3)	(5.9)
Securities collateral netting[1]		(12.5)	(1.7)
Net receivables/payables		$ 118.8	$ -

[1] Represents the netting of receivable balances with payable balances, net of collateral, for the same counterparty under eligible netting agreements.

Collateral

Under the terms of the OTC Derivative International Swaps and Derivatives Association, Inc. ("ISDA ") agreements, the Company may receive from, or deliver to, counterparties collateral to assure that terms of the ISDA agreements will be met with regard to the Credit Support Annex ("CSA"). The terms of the CSA call for the Company to pay interest on any cash received equal to the Federal Funds rate. To the extent cash collateral is received and delivered, it is included in Payables under securities loan agreements, including collateral held and Short-term investments under securities loan agreements, including collateral delivered, respectively, on the Balance Sheets and is reinvested in short-term investments. Collateral held is used in accordance with the CSA to satisfy any obligations. Investment grade bonds owned by the Company are the source of noncash collateral posted, which is reported in Securities pledged on the Balance Sheets. As of December 31, 2016, the Company held $654.8 and $23.0 of net cash collateral related to OTC derivative contracts and cleared derivative contracts, respectively. As of December 31, 2015, the Company held $423.0 and $0.4 of net cash collateral related to OTC derivative contracts and cleared derivative contracts, respectively. In addition, as of December 31, 2016, the Company delivered $477.3 of securities and held $52.1 of securities as collateral. As of December 31, 2015, the Company delivered $524.5 of securities and held $12.9 of securities as collateral.

Net realized gains (losses) on derivatives were as follows for the periods indicated:

	Year Ended December 31,		
	2016	**2015**	**2014**
Derivatives: Qualifying for hedge accounting[1]			
Cash flow hedges:			
Interest rate contracts	$ 0.3	$ 0.3	$ 0.2
Foreign exchange contracts	1.1	0.8	0.7
Fair value hedges:			
Interest rate contracts	(2.0)	(3.6)	(12.9)
Derivatives: Non-qualifying for hedge accounting[2]			
Interest rate contracts	(6.9)	135.4	797.0
Foreign exchange contracts	91.4	56.8	91.8
Equity contracts	(1,145.4)	(277.3)	(911.4)
Credit contracts	(14.4)	0.8	0.8
Embedded derivatives:			
Within fixed maturity investments[2]	(5.6)	(5.0)	(2.7)
Within products[2]	324.2	95.8	(708.4)
Within reinsurance agreements[3]	(125.6)	175.6	(231.1)
Total	$ (882.9)	$ 179.6	$ (976.0)

[1] Changes in value for effective fair value hedges are recorded in Other net realized capital gains (losses). Changes in fair value upon disposal for effective cash flow hedges are amortized through Net investment income and the ineffective portion is recorded in Other net realized capital gains (losses) in the Statements of Operations. For the years ended December 31, 2016, 2015 and 2014, ineffective amounts were immaterial.
[2] Changes in value are included in Other net realized capital gains (losses) in the Statements of Operations.
[3] Changes in value are included in Interest credited and other benefits to contract owners/policyholders in the Statements of Operations.

Credit Default Swaps

The Company has entered into various credit default swaps. When credit default swaps are sold, the Company assumes credit exposure to certain assets that it does not own. Credit default swaps may also be purchased to reduce credit exposure in the Company's portfolio. Credit default swaps involve a transfer of credit risk from one party to another in exchange for periodic payments. As of December 31, 2016, the fair values of credit default swaps of $2.6 and $0.2 were included in Derivatives assets and Derivatives liabilities, respectively, on the Balance Sheets. As of December 31, 2015, the fair values of credit default swaps of $2.3 and $5.9 were included in Derivatives assets and Derivatives liabilities, respectively, on the Balance Sheets. As of December 31, 2016, the maximum potential future net exposure to the Company was $194.0 on credit default swaps. As of December 31, 2015, the maximum potential future net exposure to the Company was $220.0 on credit default swaps. These instruments are typically written for a maturity period of 5 years and contain no recourse provisions. If the Company's current debt and claims paying ratings were downgraded in the future, the terms in the Company's derivative agreements may be triggered, which could negatively impact overall liquidity.

4. Fair Value Measurements

Fair Value Measurement

The Company categorizes its financial instruments into a three-level hierarchy based on the priority of the inputs to the valuation technique, pursuant to ASU 2011-04, "Fair Value Measurements (ASC Topic 820): Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP" ("ASU 2011-04"). The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure fair value fall within different levels of the hierarchy, the category level is based on the lowest priority level input that is significant to the fair value measurement of the instrument. Financial assets and liabilities recorded at fair value on the Balance Sheets are categorized as follows:

- Level 1 - Unadjusted quoted prices for identical assets or liabilities in an active market. The Company defines an active market as a market in which transactions take place with sufficient frequency and volume to provide pricing information on an ongoing basis.
- Level 2 - Quoted prices in markets that are not active or valuation techniques that require inputs that are observable either directly or indirectly for substantially the full term of the asset or liability. Level 2 inputs include the following:

a) Quoted prices for similar assets or liabilities in active markets;
b) Quoted prices for identical or similar assets or liabilities in non-active markets;
c) Inputs other than quoted market prices that are observable; and
d) Inputs that are derived principally from or corroborated by observable market data through correlation or other means.

- Level 3 - Prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. These valuations, whether derived internally or obtained from a third party, use critical assumptions that are not widely available to estimate market participant expectations in valuing the asset or liability.

When available, the estimated fair value of financial instruments is based on quoted prices in active markets that are readily and regularly obtainable. When quoted prices in active markets are not available, the determination of estimated fair value is based on market standard valuation methodologies, including discounted cash flow methodologies, matrix pricing or other similar techniques.

The following table presents the Company's hierarchy for its assets and liabilities measured at fair value on a recurring basis as of December 31, 2016:

	Level 1	Level 2	Level 3	Total
Assets:				
Fixed maturities, including securities pledged:				
U.S. Treasuries	$ 974.1	$ 8.8	$ -	$ 982.9

Valuation of Financial Assets and Liabilities at Fair Value

Certain assets and liabilities are measured at estimated fair value on the Company's Balance Sheets. The Company defines fair value as the price that would be received to sell an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. The exit price and the transaction (or entry) price will be the same at initial recognition in many circumstances. However, in certain cases, the transaction price may not represent fair value. The fair value of a liability is based on the amount that would be paid to

transfer a liability to a third-party with an equal credit standing. Fair value is required to be a market-based measurement that is determined based on a hypothetical transaction at the measurement date, from a market participant's perspective. The Company considers three broad valuation approaches when a quoted price is unavailable: (i) the market approach, (ii) the income approach and (iii) the cost approach. The Company determines the most appropriate valuation technique to use, given the instrument being measured and the availability of sufficient inputs. The Company prioritizes the inputs to fair valuation techniques and allows for the use of unobservable inputs to the extent that observable inputs are not available.

The Company utilizes a number of valuation methodologies to determine the fair values of its financial assets and liabilities in conformity with the concepts of exit price and the fair value hierarchy as prescribed in ASC Topic 820. Valuations are obtained from third-party commercial pricing services, brokers and industry-standard, vendor-provided software that models the value based on market observable inputs. The valuations obtained from third-party commercial pricing services are non-binding. The Company reviews the assumptions and inputs used by third-party commercial pricing services for each reporting period in order to determine an appropriate fair value hierarchy level. The documentation and analysis obtained from third-party commercial pricing services are reviewed by the Company, including in-depth validation procedures confirming the observability of inputs. The valuations are reviewed and validated monthly through the internal valuation committee price variance review, comparisons to internal pricing models, back testing to recent trades or monitoring of trading volumes.

Fixed maturities: The fair values for actively traded marketable bonds are determined based upon the quoted market prices and are classified as Level 1 assets. Assets in this category primarily include certain U.S. Treasury securities.

For fixed maturities classified as Level 2 assets, fair values are determined using a matrix-based market approach, based on prices obtained from third-party commercial pricing services and the Company’s matrix and analytics-based pricing models, which in each case incorporate a variety of market observable information as valuation inputs. The market observable inputs used for these fair value measurements, by fixed maturity asset class, are as follows:

U.S. Treasuries: Fair value is determined using third-party commercial pricing services, with the primary inputs being stripped interest and principal U.S. Treasury yield curves that represent a U.S. Treasury zero-coupon curve.
U.S. government agencies and authorities, State, municipalities and political subdivisions: Fair value is determined using third-party commercial pricing services, with the primary inputs being U.S. Treasury yield curves, trades of comparable securities, credit spreads off benchmark yields and issuer ratings.

U.S. corporate public securities, Foreign corporate public securities and foreign governments: Fair value is determined using third-party commercial pricing services, with the primary inputs being benchmark yields, trades of comparable securities, issuer ratings, bids and credit spreads off benchmark yields.

U.S. corporate private securities and Foreign corporate private securities: Fair values are determined using a matrix and analytics-based pricing model. The model incorporates the current level of risk-free interest rates, current corporate credit spreads, credit quality of the issuer and cash flow characteristics of the security. The model also considers a liquidity spread, the value of any collateral, the capital structure of the issuer, the presence of guarantees, and prices and quotes for comparably rated publicly traded securities.

RMBS, CMBS and ABS: Fair value is determined using third-party commercial pricing services, with the primary inputs being credit spreads off benchmark yields, prepayment speed assumptions, current and forecasted loss severity, debt service coverage ratios, collateral type, payment priority within tranche and the vintage of the loans underlying the security.

Generally, the Company does not obtain more than one vendor price from pricing services per instrument. The Company uses a hierarchy process in which prices are obtained from a primary vendor and, if that vendor is unable to provide the price, the next vendor in the hierarchy is contacted until a price is obtained or it is determined that a price cannot be obtained from a commercial pricing service. When a price cannot be obtained from a commercial pricing service, independent broker quotes are solicited. Securities priced using independent broker quotes are classified as Level 3.

Broker quotes and prices obtained from pricing services are reviewed and validated through an internal valuation committee price variance review, comparisons to internal pricing models, back testing to recent trades, or monitoring of trading volumes. As of December 31, 2016, $537.9 and $17.6 billion of a total fair value of $23.3 billion in fixed maturities, including securities pledged, were valued using unadjusted broker quotes and unadjusted prices obtained from pricing services, respectively and verified through the review process. The remaining balance in fixed maturities consisted primarily of privately placed bonds valued using a matrix-based pricing. As of December 31, 2015, $504.8 and $18.6 billion of a total fair value of $23.7 billion in fixed maturities, including securities pledged, were valued using unadjusted broker quotes and unadjusted prices obtained from pricing services, respectively and verified through the review process. The remaining balance in fixed maturities consisted primarily of privately placed bonds valued using a matrix-based pricing.

All prices and broker quotes obtained go through the review process described above including valuations for which only one broker quote is obtained. After review, for those instruments where the price is determined to be appropriate, the unadjusted price provided is used for financial statement valuation. If it is determined that the price is questionable, another price may be requested from a different vendor. The internal valuation committee then reviews all prices for the instrument again, along with information from the review, to determine which price best represents exit price for the instrument.

Fair values of privately placed bonds are determined primarily using a matrix-based pricing model and are generally classified as Level 2 assets. The model considers the current level of risk-free interest rates, current corporate spreads, the credit quality of the issuer and cash flow characteristics of the security. Also considered are factors such as the net worth of the borrower, the value of collateral, the capital structure of the borrower, the presence of guarantees and the Company's evaluation of the borrower's ability to compete in its relevant market. Using this data, the model generates estimated market values which the Company considers reflective of the fair value of each privately placed bond.

Equity securities, available-for-sale: Fair values of publicly traded equity securities are based upon quoted market price and are classified as Level 1 assets. Other equity securities, typically private equities or equity securities not traded on an exchange, are valued by other sources such as analytics or brokers and are classified as Level 2 or Level 3 assets.

Derivatives: Derivatives are carried at fair value which is determined using the Company's derivative accounting system in conjunction with observable key financial data from third party sources, such as yield curves, exchange rates, S&P 500 Index prices, London Interbank Offered Rates ("LIBOR") and Overnight Index Swap ("OIS") rates. The Company uses OIS for valuations of collateralized interest rate derivatives, which are obtained from third-party sources. For those derivatives that are unable to be valued by the accounting system, the Company typically utilizes values established by third-party brokers. Counterparty credit risk is considered and incorporated in the Company's valuation process through counterparty credit rating requirements and monitoring of overall exposure. It is the Company's policy to transact only with investment grade counterparties with a credit rating of A- or better. The Company's nonperformance risk is also considered and incorporated in the Company's valuation process. Valuations for the Company's futures and interest rate forward contracts are based on unadjusted quoted prices from an active exchange and, therefore, are classified as Level 1. The Company also has certain credit default swaps and options that are priced using models that primarily use market observable inputs, but contain inputs that are not observable to market participants, which have been classified as Level 3. The remaining derivative instruments, including those priced by third-party vendors, are valued based on market observable inputs and are classified as Level 2.

Cash and cash equivalents, Short-term investments and Short-term investments under securities loan agreement: The carrying amounts for cash reflect the assets' fair values. The fair values for cash equivalents and most short-term investments are determined based on quoted market prices. These assets are classified as Level 1. Other short-term investments are valued and classified in the fair value hierarchy consistent with the policies described herein, depending on investment type.

Assets held in separate accounts: Assets held in separate accounts are reported at the quoted fair values of the underlying investments in the separate accounts. The underlying investments include mutual funds, short-term investments and cash, the valuations of which are based upon a quoted market price and are included in Level 1. Fixed maturity valuations are obtained from third-party commercial pricing services and brokers and are classified in the fair value hierarchy consistent with the policy described above for fixed maturities.

Guaranteed benefit derivatives: The Company records reserves for annuity contracts containing GMAB, GMWB and GMWBL riders. The guarantee is an embedded derivative and is required to be accounted for separately from the host variable annuity

contract. The fair value of the obligation is calculated based on actuarial and capital market assumptions related to the projected cash flows, including benefits and related contract charges, over the anticipated life of the related contracts. The cash flow estimates are produced by using stochastic techniques under a variety of market return scenarios and other market implied assumptions. These derivatives are classified as Level 3 liabilities in the fair value hierarchy.

The indexed-crediting feature in the Company's FIA contracts is an embedded derivative that is required to be accounted for separately from the host contract. The fair value of the obligation is calculated based on actuarial and capital market assumptions related to the projected cash flows, including benefits and related contract charges, over the anticipated life of the related contracts. The cash flow estimates are produced by market implied assumptions. These derivatives are classified as Level 3 liabilities in the fair value hierarchy.

The discount rate used to determine the fair value of the Company's GMAB, GMWB, GMWBL and FIA embedded derivative liabilities includes an adjustment to reflect nonperformance risk. The nonperformance risk adjustment incorporates a blend of observable, similarly rated peer holding company credit default swap spreads, adjusted to reflect the credit quality of the Company, the issuer of the guarantee, as well as an adjustment to reflect the priority of policyholder claims.

The Company's valuation actuaries are responsible for the policies and procedures for valuing the embedded derivatives, reflecting the capital markets and actuarial valuation inputs and nonperformance risk in the estimate of the fair value of the embedded derivatives. The actuarial and capital market assumptions for each liability are approved by each product's Chief Risk Officer ("CRO"), including an independent annual review by the CRO. Models used to value the embedded derivatives must comply with the Company's governance policies.

Quarterly, an attribution analysis is performed to quantify changes in fair value measurements and a sensitivity analysis is used to analyze the changes. The changes in fair value measurements are also compared to corresponding movements in the hedge target to assess the validity of the attributions. The results of the attribution analysis are reviewed by the valuation actuaries, responsible CFOs, Controllers, CROs and/or others as nominated by management.

Embedded derivative on reinsurance: The carrying value of embedded derivatives is estimated based upon the change in the fair value of the assets supporting the funds withheld payable under reinsurance agreements. As the fair value of the assets held in trust is based on a quoted market price (Level 1), the fair value of the embedded derivative is based on market observable inputs and is classified as Level 2.

ansfers in and out of Level 1 and 2

There were no securities transferred between Level 1 and Level 2 for the years ended December 31, 2016 and 2015. The Company's policy is to recognize transfers in and transfers out as of the beginning of the reporting period.

Level 3 Financial Instruments

The fair values of certain assets and liabilities are determined using prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement (i.e., Level 3 as defined by ASC Topic 820), including but not limited to liquidity spreads for investments within markets deemed not currently active. These valuations, whether derived internally or obtained from a third party, use critical assumptions that are not widely available to estimate market participant expectations in valuing the asset or liability. In addition, the Company has determined, for certain financial instruments, an active market is such a significant input to determine fair value that the presence of an inactive market may lead to classification in Level 3. In light of the methodologies employed to obtain the fair values of financial assets and liabilities classified as Level 3, additional information is presented below.

The following table summarizes the change in fair value of the Company's Level 3 assets and liabilities and transfers in and out of Level 3 for the period indicated:

	Year Ended December 31, 2016										
	Fair Value as of January 1	Total Realized/Unrealized Gains (Losses) Included in:		Purchases	Issuances	Sales	Settlements	Transfers into Level 3[3]	Transfers out of Level 3[3]	Fair Value as of December 31	Change in Unrealized Gains (Losses) Included in Earnings[4]
		Net Income	OCI								
Fixed maturities, including securities pledged:

[1] Primarily U.S. dollar denominated.
[2] All gains and losses on Level 3 liabilities are classified as realized gains (losses) for the purpose of this disclosure because it is impracticable to track realized and unrealized gains (losses) separately on a contract-by-contract basis. These amounts are included in Other net realized capital gains (losses) in the Statements of Operations.
[3] The Company's policy is to recognize transfers in and transfers out as of the beginning of the reporting period.
[4] For financial instruments still held as of December 31, amounts are included in Net investment income and Total net realized capital gains (losses) in the Statements of Operations.

For the years ended December 31, 2016 and 2015, the transfers in and out of Level 3 for fixed maturities and equity securities, were due to the variation in inputs relied upon for valuation each quarter. Securities that are primarily valued using independent broker quotes when prices are not available from one of the commercial pricing services are reflected as transfers into Level 3. When securities are valued using more widely available information, the securities are transferred out of Level 3 and into Level 1 or 2, as appropriate.

Significant Unobservable Inputs

The Company's Level 3 fair value measurements of its fixed maturities, equity securities available-for-sale and equity and credit derivative contracts are primarily based on broker quotes for which the quantitative detail of the unobservable inputs is neither provided nor reasonably corroborated, thus negating the ability to perform a sensitivity analysis. The Company performs a review of broker quotes by performing a monthly price variance comparison and back tests broker quotes to recent trade prices.

Quantitative information about the significant unobservable inputs used in the Company's Level 3 fair value measurements of its guaranteed benefit derivatives is presented in the following sections and table.

Significant unobservable inputs used in the fair value measurements of GMABs, GMWBs and GMWBLs include long-term equity and interest rate implied volatility, correlations between the rate of return on policyholder funds and between interest rates and equity returns, nonperformance risk, mortality and policyholder behavior assumptions, such as benefit utilization, lapses and partial withdrawals. Such inputs are monitored quarterly.

Significant unobservable inputs used in the fair value measurements of FIAs include nonperformance risk and policyholder behavior assumptions, such as lapses and partial withdrawals. Such inputs are monitored quarterly.

Following is a description of selected inputs:

Equity/Interest Rate Volatility: A term-structure model is used to approximate implied volatility for the equity indices and swap rates for GMAB, GMWB and GMWBL fair value measurements. Where no implied volatility is readily available in the market, an alternative approach is applied based on historical volatility.

Correlations: Integrated interest rate and equity scenarios are used in GMAB, GMWB and GMWBL fair value measurements to better reflect market interest rates and interest rate volatility correlations between equity and fixed income fund groups and between equity fund groups and interest rates. The correlations are based on historical fund returns and swap rates from external sources.

Nonperformance Risk: For the estimate of the fair value of embedded derivatives associated with the Company's product guarantees, the Company uses a blend of observable, similarly rated peer company credit default swap spreads, adjusted to reflect the credit quality of the Company as well as adjustment to reflect the priority of policyholder claims.

Actuarial Assumptions: Management regularly reviews actuarial assumptions, which are based on the Company's experience and periodically reviewed against industry standards. Industry standards and Company experience may be limited on certain products.

The following table presents the unobservable inputs for Level 3 fair value measurements as of December 31, 2016:

	Range[1]		
Unobservable Input	**GMWB / GMWBL**	**GMAB**	**FIA**
Long-term equity implied volatility	15% to 25%	15% to 25%	-
Interest rate implied volatility	0.1% to 18%	0.1% to 18%	-
Correlations between:			
Equity Funds	-13% to 99%	-13% to 99%	-
Equity and Fixed Income Funds	-38% to 62%	-38% to 62%	-
Interest Rates and Equity Funds	-32% to 26%	-32% to 26%	-
Nonperformance risk	0.25% to 1.6%	0.25% to 1.6%	0.25% to 1.6%
Actuarial Assumptions:			
Benefit Utilization	85% to 100% [2]	-	-
Partial Withdrawals	-	0% to 3.4%	0% to 10%
Lapses	0.11% to 12.15% [3][4]	0.4% to 19.1% [3][4]	0% to 60% [3]
Mortality	- [5]	- [5]	- [5]

[1] Represents the range of reasonable assumptions that management has used in its fair value calculations.

[2] Those policyholders who have elected systematic withdrawals are assumed to continue taking withdrawals. As a percent of policies, approximately 40% are taking systematic withdrawals. The Company assumes that 85% of all policies will begin systematic withdrawals either immediately or after a delay period, with 100% utilizing at age 100. The utilization function varies by policyholder age and policy duration. Interactions with lapse and mortality also affect utilization. The utilization rate for GMWB and GMWBL tends to be lower for younger contract owners and contracts that have not reached their maximum accumulated GMWB and GMWBL benefit amount. There is also a lower utilization rate, though indirectly, for contracts that are less "in the money" (i.e., where the notional benefit amount is in excess of the account value) due to higher lapses. Conversely, the utilization rate tends to be higher for contract owners near or beyond retirement age and contracts that have accumulated their maximum GMWB or GMWBL benefit amount. There is also a higher utilization rate, though indirectly, for contracts which are highly "in the money". The chart below provides the GMWBL account value by current age group and average expected delay times from the associated attained age group as of December 31, 2016 (account value amounts are in $ billions).

	Account Values			
Attained Age Group	**In the Money**	**Out of the Money**	**Total**	**Average Expected Delay (Years)****
< 60	$ 1.8	$ - *	$ 1.8	9.9
60-69	5.6	0.1	5.7	4.9
70+	5.7	0.1	5.8	3.0
	$ 13.1	$ 0.2	$ 13.3	5.5

*Less than $0.1.

** For population expected to withdraw in future. Excludes policies taking systematic withdraws and 15% of policies the Company assumes will never withdraw until age 100.

[3] Lapse rates tend to be lower during the contractual surrender charge period and higher after the surrender charge period ends; the highest lapse rates occur in the year immediately after the end of the surrender charge period.

[4] The Company makes dynamic adjustments to lower the lapse rates for contracts that are more "in the money." The table below shows an analysis of policy account values according to whether they are in or out of the surrender charge period or at the shock lapse period and to whether they are "in the money" or "out of the money" as of December 31, 2016 (account value amounts are in $ billions). Lapse ranges are based on weighted average ranges of underlying account value exposure.

		GMAB		GMWB/GMWBL	
	Moneyness	**Account Value**	**Lapse Range**	**Account Value**	**Lapse Range**
During Surrender Charge Period					
	In the Money**	$ -	0.4% to 6.9%	$ 2.0	0.1% to 4.5%
	Out of the Money	-	1.6% to 7.6%	- *	0.6% to 4.7%
Shock Lapse Period					
	In the Money**	$ -	4.7% to 17.3%	$ 2.7	2.3% to 11.6%
	Out of the Money	-	17.3% to 19.1%	- *	11.6% to 12.2%
After Surrender Charge Period					
	In the Money**	$ -	2.8% to 10.6%	$ 8.5	1.4% to 6.7%
	Out of the Money	0.1	10.6% to 11.7%	0.6	6.7% to 7.0%

* Less than $0.1.
**The low end of the range corresponds to policies that are highly "in the money." The high end of the range corresponds to the policies that are close to zero in terms of "in the moneyness."
(5)The mortality rate is based on the 2012 Individual Annuity Mortality Basic table with mortality improvements.

The following table presents the unobservable inputs for Level 3 fair value measurements as of December 31, 2015:

	Range[1]		
Unobservable Input	**GMWB / GMWBL**	**GMAB**	**FIA**
Long-term equity implied volatility	15% to 25%	15% to 25%	-
Interest rate implied volatility	0.1% to 18%	0.1% to 18%	-
Correlations between:			
Equity Funds	48% to 98%	48% to 98%	-
Equity and Fixed Income Funds	-38% to 62%	-38% to 62%	-
Interest Rates and Equity Funds	-32% to 16%	-32% to 16%	-
Nonperformance risk	0.23% to 1.3%	0.23% to 1.3%	0.23% to 1.3%
Actuarial Assumptions:			
Benefit Utilization	85% to 100% [2]	-	-
Partial Withdrawals	0% to 10%	0% to 10%	0% to 10%
Lapses	0.08% to 22% [3][4]	0.08% to 25% [3][4]	0% to 60% [3]
Mortality	- [5]	- [5]	- [5]

[1] Represents the range of reasonable assumptions that management has used in its fair value calculations.
[2] Those policyholders who have elected systematic withdrawals are assumed to continue taking withdrawals. As a percent of account value, 36% are taking systematic withdrawals. Of those policyholders who are not taking withdrawals, the Company assumes that 85% will begin systematic withdrawals after a delay period. The utilization function varies by policyholder age and policy duration. Interactions with lapse and mortality also affect utilization. The utilization rate for GMWB and GMWBL tends to be lower for younger contract owners and contracts that have not reached their maximum accumulated GMWB and GMWBL benefit amount. There is also a lower utilization rate, though indirectly, for contracts that are less "in the money" (i.e., where the notional benefit amount is in excess of the account value) due to higher lapses. Conversely, the utilization rate tends to be higher for contract owners near or beyond retirement age and contracts that have accumulated their maximum GMWB or GMWBL benefit amount. There is also a higher utilization rate, though indirectly, for contracts which are highly "in the money". The chart below provides the GMWBL account value by current age group and average expected delay times from the associated attained age group as of December 31, 2015 (account value amounts are in $ billions).

	Account Values			
Attained Age Group	**In the Money**	**Out of the Money**	**Total**	**Average Expected Delay (Years)***
< 60	$ 2.2	$ - *	$ 2.2	9.0
60-69	6.1	- *	6.1	4.2
70+	5.4	- *	5.4	2.4
	$ 13.7	$ - *	$ 13.7	5.0

* Less than $0.1
** For population expected to withdraw in future. Excludes policies taking systematic withdrawals and policies the Company assumes will never withdraw.
(3) Lapse rates tend to be lower during the contractual surrender charge period and higher after the surrender charge period ends; the highest lapse rates occur in the year immediately after the end of the surrender charge period.
(4) The Company makes dynamic adjustments to lower the lapse rates for contracts that are more "in the money." The table below shows an analysis of policy account values according to whether they are in or out of the surrender charge period or at the shock lapse period and to whether they are "in the money" or "out of the money" as of December 31, 2015 (account value amounts are in $ billions). The December 31, 2015 presentation and calculation of the lapse ranges has been made consistent with the current period. Lapse ranges are based on weighted average ranges of underlying account value exposure.

		GMAB		GMWB/GMWBL	
	Moneyness	**Account Value**	**Lapse Range**	**Account Value**	**Lapse Range**
During Surrender Charge Period					
	In the Money**	$ -	0.4% to 6.9%	$ 4.9	0.1% to 4.5%
	Out of the Money	-	1.6% to 7.6%	- *	0.6% to 4.7%
Shock Lapse Period					
	In the Money**	$ - *	5.4% to 22.3%	$ 1.8	3.0% to 13.7%
	Out of the Money	- *	22.3% to 24.5%	- *	13.7% to 14.4%
After Surrender Charge Period					
	In the Money**	$ - *	2.8% to 12.1%	$ 7.1	1.8% to 7.9%
	Out of the Money	- *	12.1% to 13.3%	0.5	7.9% to 8.2%

* Less than $0.1.
** The low end of the range corresponds to policies that are highly "in the money." The high end of the range corresponds to the policies that are close to zero in terms of "in the moneyness."
(5) The mortality rate is based on the 2012 Individual Annuity Mortality Basic table with mortality improvements.

Generally, the following will cause an increase (decrease) in the GMAB, GMWB and GMWBL embedded derivative fair value liabilities:

- An increase (decrease) in long-term equity implied volatility
- An increase (decrease) in interest rate implied volatility
- An increase (decrease) in equity-interest rate correlations
- A decrease (increase) in nonperformance risk
- A decrease (increase) in mortality
- An increase (decrease) in benefit utilization
- A decrease (increase) in lapses

Changes in fund correlations may increase or decrease the fair value depending on the direction of the movement and the mix of funds. Changes in partial withdrawals may increase or decrease the fair value depending on the timing and magnitude of withdrawals.

Generally, the following will cause an increase (decrease) in the FIA embedded derivative fair value liability:

- A decrease (increase) in nonperformance risk
- A decrease (increase) in lapses

The Company notes the following interrelationships:

- Higher long-term equity implied volatility is often correlated with lower equity returns, which will result in higher in-the-moneyness, which in turn, results in lower lapses due to the dynamic lapse component reducing the lapses. This increases the projected number of policies that are available to use the GMWBL benefit and may also increase the fair value of the GMWBL.
- Generally, an increase (decrease) in benefit utilization will decrease (increase) lapses for GMWB and GMWBL.

Other Financial Instruments

The carrying values and estimated fair values of the Company's financial instruments as of the dates indicated:

	December 31, 2016		December 31, 2015	
	Carrying Value	Fair Value	Carrying Value	Fair Value
Assets:				
Fixed maturities, including securities pledged	$ 23,269.5	$ 23,269.5	$ 23,678.2	$ 23,678.2
Equity securities, available-for-sale	18.7	18.7	19.2	19.2
Mortgage loans on real estate	3,881.5	3,940.3	3,310.9	3,429.8

Embedded derivative on reinsurance	145.5	145.5	10.2	10.2

[1] Certain amounts included in Deferred annuities are also reflected within the Guaranteed benefit derivatives section of the table above.

The following disclosures are made in accordance with the requirements of ASC Topic 825 which requires disclosure of fair value information about financial instruments, whether or not recognized at fair value on the Balance Sheets, for which it is practicable to estimate that value. In cases where quoted market prices are not available, fair values are based on estimates using present value or other valuation techniques. Those techniques are significantly affected by the assumptions used, including the discount rate and estimates of future cash flows. In that regard, the derived fair value estimates, in many cases, could not be realized in immediate settlement of the instrument.

ASC Topic 825 excludes certain financial instruments, including insurance contracts and all nonfinancial instruments from its disclosure requirements. Accordingly, the aggregate fair value amounts presented do not represent the underlying value of the Company.

The following valuation methods and assumptions were used by the Company in estimating the fair value of the following financial instruments, which are not carried at fair value on the Balance Sheets:

Mortgage loans on real estate: The fair values for mortgage loans on real estate are estimated on a monthly basis using discounted cash flow analyses and rates currently being offered in the marketplace for similar loans to borrowers with similar credit ratings. Loans with similar characteristics are aggregated for purposes of the calculations. Mortgage loans on real estate are classified as Level 3.

Policy loans: The fair value of policy loans approximates the carrying value of the loans. Policy loans are collateralized by the cash surrender value of the associated insurance contracts and are classified as Level 2.

Other investments: FHLB stock is carried at cost and periodically evaluated for impairment based on ultimate recovery of par value and is classified as Level 2.

Deposits from affiliates: Fair value is estimated based on the fair value of the liabilities for the underlying contracts. Fair value is estimated by discounting cash flows, including associated expenses for maintaining the contracts, at rates, that are risk-free rates plus an adjustment for nonperformance risk. These liabilities are classified as Level 2.

Investment contract liabilities:

Deferred annuities: Fair value is estimated as the mean present value of stochastically modeled cash flows associated with the contract liabilities, taking into account assumptions about contract holder behavior. The stochastic valuation scenario set is consistent with current market parameters and discount is taken using stochastically evolving risk-free rates in the scenarios plus an adjustment for nonperformance risk. Margins for non-financial risks associated with the contract liabilities are also included. These liabilities are classified as Level 3.

Funding agreements with fixed maturities: Fair value is estimated by discounting cash flows, including associated expenses for maintaining the contracts, at rates, that are risk-free rates plus an adjustment for nonperformance risk. These liabilities are classified as Level 2.

Supplementary contracts and immediate annuities: Fair value is estimated as the mean present value of the single deterministically modeled cash flows associated with the contract liabilities discounted using stochastically evolving short risk-free rates in the scenarios plus an adjustment for nonperformance risk. The valuation is consistent with current market parameters. Margins for non-financial risks associated with the contract liabilities are also included. These liabilities are classified as Level 3.

Long-term debt: Estimated fair value of the Company's notes to affiliates is based upon discounted future cash flows using a discount rate approximating the current market rate, incorporating nonperformance risk and is classified as Level 2.

Fair value estimates are made at a specific point in time, based on available market information and judgments about various financial instruments, such as estimates of timing and amounts of future cash flows. Such estimates do not reflect any premium or discount that could result from offering for sale at one time the Company's entire holdings of a particular financial instrument, nor do they consider the tax impact of the realization of unrealized capital gains (losses). In many cases, the fair value estimates cannot be substantiated by comparison to independent markets, nor can the disclosed value be realized in immediate settlement of the instruments. In evaluating the Company's management of interest rate, price and liquidity risks, the fair values of all assets and liabilities should be taken into consideration, not only those presented above.

5. Deferred Policy Acquisition Costs and Value of Business Acquired

The following table presents a rollforward of DAC and VOBA for the periods indicated:

	DAC	VOBA	Total
Balance at January 1, 2014	$ 2,271.7	$ 58.6	$ 2,330.3
Deferrals of commissions and expenses	118.2	-	118.2
Amortization:			
Amortization	24.4	(12.2)	12.2 [2]
Interest accrued	100.5	3.3 [1]	103.8
Net amortization included in the Statements of Operations	124.9	(8.9)	116.0
Change in unrealized capital gains/losses on available-for-sale securities	(301.9)	(10.6)	(312.5)
Balance as of December 31, 2014	2,212.9	39.1	2,252.0
Deferrals of commissions and expenses	115.3	-	115.3
Amortization:			
Amortization	(688.2)	(17.2)	(705.4) [2]
Interest accrued	35.8	2.6 [1]	38.4
Net amortization included in the Statements of Operations	(652.4)	(14.6)	(667.0)
Change in unrealized capital gains/losses on available-for-sale securities	424.4	20.1 &sbsp;	444.5
Balance as of December 31, 2015	2,100.2	44.6	2,144.8
Deferrals of commissions and expenses	123.1	-	123.1
Amortization:			
Amortization	(446.8)	(9.1)	(455.9) [2]
Interest accrued	30.8	2.1 [1]	32.9
Net amortization included in the Statements of Operations	(416.0)	(7.0)	(423.0)
Change in unrealized capital gains/losses on available-for-sale securities	(122.3)	(6.9)	(129.2)
Balance as of December 31, 2016	$ 1,685.0	$ 30.7	$ 1,715.7

[1] Interest accrued at the following rates for VOBA: 3.8% to 5.8% during 2016, 2.2% to 5.8% during 2015 and 2.0% to 5.8% during 2014.
[2] Includes loss recognition for DAC and VOBA of $137.1 and $0.6, respectively, during 2016 and loss recognition for DAC and VOBA of $275.7 and $1.2, respectively, during 2015. There was no loss recognition for DAC and VOBA during 2014.

The estimated amount of VOBA amortization expense, net of interest, for the next five years is presented in the following table. Actual amortization incurred during these years may vary as assumptions are modified to incorporate actual results and/or changes in best estimates of future results.

Year	Amount
2017	7.5
2018	6.6
2019	6.0
2020	6.1
2021	7.4

6. Sales Inducements

During the years ended December 31, 2016, 2015 and 2014, the Company capitalized $28.5, $22.0 and $28.4, respectively, of Sales inducements to contract owners. During the years ended December 31, 2016, 2015 and 2014, the Company amortized $(126.3), $(109.8) and $(19.3), respectively, of Sales inducements to contract owners, which included loss recognition of $32.3 and $65.1 for the years ended December 31, 2016 and 2015, respectively. The Company had no loss recognition related to Sales inducements to contract owners for the year ended December 31, 2014. The unamortized balance of capitalized Sales inducements to contract owners was $312.9 and $431.6 as of December 31, 2016 and 2015, respectively.

7. Guaranteed Benefit Features

While the Company stopped actively writing new retail variable annuity products with substantial guarantee features in early 2010, its currently-sold retail variable annuity contracts with separate account options guarantee the contract owner a return of no less than (i) total deposits made to the contract less any partial withdrawals, (ii) total deposits made to the contract less any partial withdrawals plus a minimum return, or (iii) the highest contract value on a specified date minus any withdrawals. These guarantees include benefits that are payable in the event of death, annuitization or at specified dates.

The Company also has certain indexed annuity products which contain guaranteed withdrawal benefit provisions. This provision guarantees an annual withdrawal amount for life that is calculated as a percentage of the benefit base, which equals premium paid at the time of product issue, and can increase by a rollup percentage (mainly 7%, 6% or a percentage linked to index credits earned, depending on versions of the benefit) or annual ratchet. The percentage used to determine the guaranteed annual withdrawal amount may vary by age at first withdrawal and depends on whether the benefit is for a single life or joint lives.

The Company’s major source of income from guaranteed benefit features is the base contract mortality, expense, and guaranteed death and living benefit rider fees charged to the contract owner, less the costs of administering the product and providing for the guaranteed death and living benefits.

The Company's closed block of variable annuity contracts offer one or more of the following guaranteed death and living benefits:

Guaranteed Minimum Death Benefits (GMDB)

- *Standard*: Guarantees that, upon the death of the individual specified in the policy, the death benefit will be no less than the premiums paid by the customer, adjusted for withdrawals.
- *Ratchet*: Guarantees that, upon the death of the individual specified in the policy, the death benefit will be no less than the greater of (1) Standard or (2) the maximum policy anniversary (or quarterly) value of the variable annuity, adjusted for withdrawals.
- *Rollup*: Guarantees that, upon the death of the individual specified in the policy, the death benefit will be no less than the aggregate premiums paid by the contract owner, with interest at the contractual rate per annum, adjusted for withdrawals. The Rollup may be subject to a maximum cap on the total benefit.
- *Combo*: Guarantees that, upon the death of the individual specified in the policy, the death benefit will be no less than the greater of (1) Ratchet or (2) Rollup.

Guaranteed Minimum Living Benefits

Guaranteed Minimum Income Benefit (GMIB): Guarantees a minimum income payout, exercisable only on a contract anniversary on or after a specified date, in most cases 10 years after purchase of the GMIB rider. The income payout is determined based on contractually established annuity factors multiplied by the benefit base. The benefit base equals the premium paid at the time of product issue and may increase over time based on a number of factors, including a rollup percentage (mainly 7% or 6% depending on the version of the benefit) and ratchet frequency subject to maximum caps which vary by product version (200%, 250% or 300% of initial premium).

Guaranteed Minimum Withdrawal Benefit and Guaranteed Minimum Withdrawal Benefit for Life (GMWB/GMWBL): Guarantees an annual withdrawal amount for a specified period of time (GMWB) or life (GMWBL) that is calculated as a percentage of the benefit base that equals premium paid at the time of product issue and may increase over time based on a number of factors, including a rollup percentage (mainly 7%, 6% or 0%, depending on versions of the benefit) and ratchet frequency (primarily annually or quarterly, depending on versions). The rollup ceases 10 years after purchase of the rider, or in the year when withdrawals occur. The percentage used to determine the guaranteed annual withdrawal amount may vary by age at first withdrawal and depends on versions of the benefit. A joint life-time withdrawal benefit option was available to include coverage for spouses. Most versions of the withdrawal benefit included reset and/or step-up features that may increase the guaranteed withdrawal amount in certain conditions. Earlier versions of the withdrawal benefit guarantee that annual withdrawals of up to 7.0% of eligible premiums may be made until eligible premiums previously paid by the contract owner are returned, regardless of account value performance. Asset allocation requirements apply at all times where withdrawals are guaranteed for life.

Guaranteed Minimum Accumulation Benefit (GMAB): Guarantees that the account value will be at least 100% of the eligible premiums paid by the customer after 10 years, adjusted for withdrawals. The Company offered an alternative design that guaranteed the account value to be at least 200% of the eligible premiums paid by contract owners after 20 years.

The following assumptions and methodology were used to determine the guaranteed reserves for closed block of variable annuity contracts as of December 31, 2016 and 2015:

Area	Assumptions/Basis for Assumptions
Data used	Based on 1,000 investment performance scenarios.
Mean investment performance	GMDB and GMIB: The overall blended mean is 7.8% based on a single fund group. GMAB / GMWB / GMWBL: Zero rate curve.
Volatility	GMDB: 14.2% for 2016 and 15.1% for 2015. GMIB: 14.2% for 2016 and 15.1% for 2015. GMAB / GMWB / GMWBL: Implied volatilities through the first 5 years and then a blend of implied and historical thereafter.
Mortality	Depending on the type of benefit and gender, the Company uses the 2012 Individual Annuity Mortality Basic table with mortality improvement through December 31, 2016, further adjusted for company experience.
Lapse rates	Vary by contract type, share class, time remaining in the surrender charge period and in-the-moneyness.
Discount rates	GMDB / GMIB: 5.5% for 2016 and 2015. GMAB / GMWB / GMWBL: Zero rate curve plus adjustment for nonperformance risk.

Variable annuity contracts containing guaranteed minimum death and living benefits expose the Company to market risk. For example, with a decline in the equity markets, the Company has exposure to increasing claims due to the guaranteed minimum benefits. On the other hand, with an increase in the equity markets, the Company's exposure to risks associated with the guaranteed minimum benefits generally decreases. In order to mitigate the risk associated with guaranteed death and living benefits, the Company enters into reinsurance agreements and derivative positions on various public market indices chosen to closely replicate contract owner variable fund returns.

The calculation of the GMDB, GMIB, GMAB, GMWB, and GMWBL liabilities assumes dynamic surrenders and dynamic utilization of the guaranteed living benefit feature.

The liabilities for variable annuity contracts containing guaranteed minimum death and living benefits are recorded in separate account liabilities as follows as of December 31, 2016 and 2015. The separate account liabilities may include more than one type of guarantee. These liabilities are subject to the requirements for additional reserve liabilities under ASC Topic 944, which are

recorded on the Balance Sheets in Future policy benefits and contract owner account balances. The paid and incurred amounts were as follows for the years ended December 31, 2016, 2015 and 2014:

	GMDB[1]	GMAB/GMWB	GMIB[2]	GMWBL[3]
Separate account liability at December 31, 2016	$ 30,838.9	$ 534.0	$ 9,806.7	$ 13,311.4
Separate account liability at December 31, 2015	$ 33,321.3	$ 593.5	$ 11,338.1	$ 13,811.4
Additional liability balance:				
Balance at January 1, 2014	$ 339.0	$ 28.7	$ -	$ 414.0
Incurred guaranteed benefits	108.6	4.8	-	631.5
Paid guaranteed benefits	(73.3)	(0.7)	-	-
Balance at December 31, 2014	374.3	32.8	-	1,045.5
Incurred guaranteed benefits	231.4	(3.1)	-	200.5
Paid guaranteed benefits	(88.5)	(0.6)	-	-
Balance at December 31, 2015	517.2	29.1	-	1,246.0
Incurred guaranteed benefits	128.2	(6.5)	-	(353.8)
Paid guaranteed benefits	(135.5)	(0.5)	-	-
Balance at December 31, 2016	$ 509.9	$ 22.1	$ -	$ 892.2

[1]The additional liability balances as of December 31, 2016, 2015, 2014 and as of January 1, 2014 are presented net of reinsurance of $29.0, $32.8, $30.8 and $33.2, respectively.
[2]The additional liability balances as of December 31, 2016, 2015, 2014 and as of January 1, 2014 are presented net of reinsurance of $1.3 billion, $1.4 billion, $1.1 billion and $1.1 billion, respectively.
[3]The additional liability balances as of December 31, 2016, 2015, 2014 and as of January 1, 2014 are presented net of reinsurance of $598.2, $573.9, $486.1 and $458.3, respectively.

The Company also calculates additional liabilities for FIA contracts with guaranteed withdrawal benefits. The additional liability represents the expected value of these benefits in excess of the projected account balance, and is accreted based on assessments over the accumulation period of the contract. The additional liability for FIA guaranteed withdrawal benefits was $146.6 and $91.0, as of December 31, 2016 and 2015, respectively. The additional liability is recorded in Future policy benefits and contract owner account balances on the Balance Sheets.

The net amount at risk for the GMDB, GMAB and GMWB benefits is equal to the guaranteed value of these benefits in excess of the account values.

The net amount at risk for the GMIB and GMWBL benefits is equal to the excess of the present value of the minimum guaranteed annuity payments available to the contract owner over the current account value.

The separate account values, net amount at risk, net of reinsurance, and the weighted average attained age of contract owners by type of minimum guaranteed benefit, were as follows as of the dates indicated.

	In the Event of Death	At Annuitization, Maturity, or Withdrawal		
	GMDB	GMAB/GMWB	GMIB	GMWBL
December 31, 2016				
Separate account value	$ 30,838.9	$ 534.0	$ 9,806.7	$ 13,311.4
Net amount at risk, net of reinsurance	$ 5,503.9	$ 13.5	$ -	$ -
Weighted average attained age	71	73	-	-
December 31, 2015				
Separate account value	$ 33,321.3	$ 593.5	$ 11,338.1	$ 13,811.4
Net amount at risk, net of reinsurance	$ 6,073.6	$ 17.2	$ -	$ -
Weighted average attained age	70	72	-	-

The aggregate fair value of equity securities, including mutual funds, supporting separate accounts with additional insurance benefits and minimum investment return guarantees as of December 31, 2016 and 2015 was $30.8 billion and $33.3 billion, respectively.

8. Reinsurance

The Company has reinsurance treaties with 14 unaffiliated reinsurers covering a portion of the mortality risks and guaranteed death and living benefits under its life and annuity contracts. The Company, as cedant, also has reinsurance treaties with three affiliates, SLD, SLDI and RRII, related to funding agreements, fixed annuities, variable annuities and universal life insurance policies. In addition, the Company assumed reinsurance risk under reinsurance treaties with its affiliate, ReliaStar Life Insurance Company ("RLI") related to certain life insurance policies and employee benefit group annual term policies. The Company remains liable to the extent its reinsurers do not meet their obligations under the reinsurance agreements. Furthermore, the Company has an agreement with SLD which is accounted for using the deposit method. For additional information regarding these transactions with affiliates, see the *Related Party Transactions* Note for further detail.

Deposits, premiums receivable and reinsurance recoverable was comprised of the following as of the dates indicated:

	December 31,	
	2016	2015
Reserves ceded and claims recoverable [1]	$ 6,805.2	$ 5,041.5
Deposits [1]	157.8	155.3
Funds withheld by ceding companies [1]	431.5	449.1
Premiums receivable, net	23.0	-
Total	$ 7,417.5	$ 5,645.9

[1] Includes amounts with affiliates - refer to the *Related Party Transactions* Note for further detail.

The following table summarizes the effect of reinsurance on Premiums for the periods indicated:

	December 31,		
	2016	2015	2014
Premiums:			
Direct premiums	$ 731.8	$ 482.7	$ 634.2
Reinsurance assumed [(1)]	436.1	428.5	407.7
Reinsurance ceded [(1)]	(671.4)	(405.4)	(504.1)
Net premiums	$ 496.5	$ 505.8	$ 537.8

[(1)] Includes amounts with affiliates - refer to the *Related Party Transactions* Note for further detail.

9. Capital Contributions, Dividends and Statutory Information

Iowa insurance law imposes restrictions on an Iowa insurance company's ability to pay dividends to its parent. These restrictions are based in part on the prior year's statutory income and surplus. In general, dividends up to specified levels are considered ordinary and may be paid without prior approval. Dividends in larger amounts, or extraordinary dividends, are subject to approval by the Iowa Insurance Commission.

Under Iowa law, an extraordinary dividend or distribution is defined as a dividend or distribution that, together with other dividends or distributions made within the preceding twelve months, exceeds the greater of (1) ten percent (10.0%) of the Company's earned statutory surplus at the prior year end or (2) the Company's prior year statutory net gain from operations. Iowa law also prohibits an Iowa insurer from declaring or paying a dividend except out of its earned surplus unless prior insurance regulatory approval is obtained.

On June 9, 2016 the Company declared an ordinary dividend in the amount of $373.0, which was paid to its Parent on June 27, 2016. On May 20, 2015, the Company paid an ordinary dividend in the amount of $394.0 to its Parent.

During the year ended December 31, 2016, the Company did not pay any extraordinary distributions to its Parent. During the year ended December 31, 2015, the Company paid an extraordinary distribution in the amount of $98.0 to its Parent.

During the years ended December 31, 2016, and 2015, the Company did not receive any capital contributions from its Parent.

The Company is subject to minimum risk-based capital ("RBC") requirements established by the Division. The formulas for determining the amount of RBC specify various weighting factors that are applied to financial balances or various levels of activity based on the perceived degree of risk. Regulatory compliance is determined by a ratio of total adjusted capital ("TAC"), as defined by the National Association of Insurance Commissioners ("NAIC"), to authorized control level RBC, as defined by the NAIC. The Company exceeded the minimum RBC requirements that would require any regulatory or corrective action for all periods presented herein.

The Company is required to prepare statutory financial statements in accordance with statutory accounting practices prescribed or permitted by the Division. Such statutory accounting practices primarily differ from U.S. GAAP by charging policy acquisition costs to expense as incurred, establishing future policy benefit liabilities and contract owner account balances using different actuarial assumptions as well as valuing investments and certain assets and accounting for deferred taxes on a different basis. Certain assets that are not admitted under statutory accounting principles are charged directly to surplus. Depending on the regulations of the Division, the entire amount or a portion of an insurance company's asset balance can be non-admitted depending on specific rules regarding admissibility. The most significant non-admitted assets of the Company are typically deferred tax assets.

Statutory net income (loss) was $232.4, $553.3 and $335.6, for the years ended December 31, 2016, 2015 and 2014, respectively. Statutory capital and surplus was $1.9 billion and $2.1 billion as of December 31, 2016 and 2015, respectively .

10. Accumulated Other Comprehensive Income (Loss)

Shareholder's equity included the following components of AOCI as of the dates indicated:

	December 31,		
	2016	2015	2014
Fixed maturities, net of OTTI	$ 760.8	$ 406.8	$ 1,388.5
Equity securities, available-for-sale	3.5	3.8	3.6
Derivatives	10.3	11.8	7.6
DAC/VOBA, Sales inducements and other intangibles adjustments on available-for-sale securities	(371.6)	(181.3)	(714.0)
Other	(35.4)	(35.9)	(35.5)
Unrealized capital gains (losses), before tax	367.6	205.2	650.2
Deferred income tax asset (liability)	56.9	113.7	(42.0)
Unrealized capital gains (losses), after tax	424.5	318.9	608.2
Pension and other postretirement benefits liability, net of tax	0.6	0.7	0.8
AOCI	$ 425.1	$ 319.6	$ 609.0

Changes in AOCI, including the reclassification adjustments recognized in the Statements of Operations, were as follows for the periods indicated:

	Year Ended December 31, 2016		
	Before-Tax Amount	**Income Tax**	**After-Tax Amount**
Available-for-sale securities:			
Fixed maturities	$ 354.9	$ (124.1)	$ 230.8
Equity securities	(0.3)	0.1	(0.2)
Other	0.5	(0.2)	0.3
OTTI	9.0	(3.2)	5.8
Adjustments for amounts recognized in Net realized capital gains (losses) in the Statements of Operations	(9.9)	3.5	(6.4)
DAC/VOBA, Sales inducements and other intangibles	(190.3) [1]	66.6	(123.7)
Change in unrealized gains/losses on available-for-sale securities	163.9	(57.3)	106.6
Derivatives:			
Derivatives	(1.5) [2]	0.5	(1.0)
Adjustments related to effective cash flow hedges for amounts recognized in Net investment income in the Statements of Operations	-	-	-
Change in unrealized gains/losses on derivatives	(1.5)	0.5	(1.0)
Pension and other postretirement benefits liability:			
Amortization of prior service cost recognized in Operating expenses in the Statements of Operations	(0.1) [3]	-	(0.1)
Change in pension and other postretirement benefits liability	(0.1)	-	(0.1)
Change in Other comprehensive income (loss)	$ 162.3	$ (56.8)	$ 105.5

[1] See the *Deferred Policy Acquisition Costs and Value of Business Acquired* Note to these Financial Statements for additional information.
[2] See the *Derivative Financial Instruments* Note to these Financial Statements for additional information.
[3] See the *Benefit Plans* Note to these Financial Statements for amounts reported in Net Periodic (Benefit) Costs.

	Year Ended December 31, 2015		
	Before-Tax Amount	Income Tax	After-Tax Amount
Available-for-sale securities:			
Fixed maturities	$ (1,025.8)	$ 359.0	$ (666.8)
Equity securities	0.2	(0.1)	0.1
Other	(0.4)	0.1	(0.3)
OTTI	6.6	(2.3)	4.3
Adjustments for amounts recognized in Net realized capital gains (losses) in the Statements of Operations	37.5	(13.1)	24.4
DAC/VOBA, Sales inducements and other intangibles	532.7 [(1)]	(186.4)	346.3
Change in unrealized gains/losses on available-for-sale securities	(449.2)	157.2	(292.0)

[2] See the *Derivative Financial Instruments* Note to these Financial Statements for additional information.
[3] See the *Benefit Plans* Note to these Financial Statements for amounts reported in Net Periodic (Benefit) Costs.

11. Income Taxes

Income tax expense (benefit) consisted of the following for the periods indicated:

	Year Ended December 31,		
	2016	2015	2014
Current tax expense (benefit):			
Federal	$ 67.0	$ (68.5)	$ 69.9
Total current tax expense (benefit)	67.0	(68.5)	69.9
Deferred tax expense (benefit):			
Federal	48.9	14.6	27.4
Total deferred tax expense (benefit)	48.9	14.6	27.4
Total income tax expense (benefit)	$ 115.9	$ (53.9)	$ 97.3

Income taxes were different from the amount computed by applying the federal income tax rate to Income (loss) before income taxes for the following reasons for the periods indicated:

	Year Ended December 31,		
	2016	2015	2014
Income (loss) before income taxes	$ 135.2	$ (79.0)	$ 72.4
Tax rate	35.0%	35.0%	35.0%
Income tax expense (benefit) at federal statutory rate	47.3	(27.7)	25.3
Tax effect of:			
Dividends received deduction	(68.3)	(76.3)	(58.6)
Valuation allowance	136.1	47.7	125.8
Audit settlements	(2.2)	-	2.8
Tax credits	1.7	2.3	2.0
Non-deductible expense (benefit)	1.3	0.1	0.2
Other	-	-	(0.2)
Income tax expense (benefit)	$ 115.9	$ (53.9)	$ 97.3
Effective tax rate	85.7%	68.2%	134.4%

Temporary Differences

The tax effects of temporary differences that give rise to deferred tax assets and deferred tax liabilities as of the dates indicated, are presented below.

	Year Ended December 31,	
	2016	2015
Deferred tax assets		
Insurance reserves	$ 767.5	$ 759.0
Investments	817.9	867.9
Compensation and benefits	22.9	21.7
Other assets	22.0	21.6
Total gross assets before valuation allowance	1,630.3	1,670.2
Less: Valuation allowance	733.5	597.4
Assets, net of valuation allowance	896.8	1,072.8
Deferred tax liabilities		
Deferred policy acquisition costs	(662.9)	(842.7)
Net unrealized investment (gains) losses	(244.7)	(135.3)
Total gross liabilities	(907.6)	(978.0)
Net deferred income tax asset (liability)	$ (10.8)	$ 94.8

Valuation allowances are provided when it is considered more likely than not that some portion or all of the deferred tax assets will not be realized. As of December 31, 2016 and 2015, the Company had total valuation allowances of $733.5 and $597.4, respectively. As of December 31, 2016 and 2015, $919.2 and $783.1, respectively, of these valuation allowances were allocated to continuing operations, and $(185.7) as of the end of each period was allocated to Other comprehensive income (loss) related to realized and unrealized capital losses.

For the years ended December 31, 2016, 2015 and 2014, the increases in the valuation allowance were $136.1, $47.7 and $125.8, respectively, all of which were allocated to continuing operations.

Tax Sharing Agreement

The Company had a receivable from Voya Financial, Inc. of $4.1 as of December 31, 2016 and a payable to Voya Financial, Inc. of $27.6 as of December 31, 2015, for federal income taxes under the intercompany tax sharing agreement.

The results of the Company's operations are included in the consolidated tax return of Voya Financial, Inc. Generally, the Company's financial statements recognize the current and deferred income tax consequences that result from the Company's activities during the current and preceding periods pursuant to the provisions of Income Taxes (ASC Topic 740) as if the Company were a separate taxpayer rather than a member of Voya Financial, Inc.'s consolidated income tax return group with the exception of any net operating loss carryforwards and capital loss carryforwards, which are recorded pursuant to the tax sharing agreement. If the Company instead were to follow a separate taxpayer approach without any exceptions, there would be no impact to income tax expense (benefit) for the periods indicated above. Also, any current tax benefit related to the Company's tax attributes realized by virtue of its inclusion in the consolidated tax return of Voya Financial, Inc. would have been recorded directly to equity rather than income. Under the tax sharing agreement, Voya Financial, Inc. will pay the Company for the tax benefits of ordinary and capital losses only in the event that the consolidated tax group actually uses the tax benefit of losses generated.

Unrecognized Tax Benefits

Reconciliations of the change in the unrecognized income tax benefits for the periods indicated are as follows:

	Year Ended December 31,		
	2016	2015	2014
Balance at beginning of period	$ 5.5	$ 5.5	$ 2.7
Additions for tax positions related to prior years	-	-	2.8
Reductions for tax positions related to prior years	(2.3)	-	-
Reductions for settlements with taxing authorities	(1.3)	-	-
Balance at end of period	$ 1.9	$ 5.5	$ 5.5

The Company had $1.9, $5.5 and $5.5, respectively, of unrecognized tax benefits as of December 31, 2016, 2015 and 2014, which would affect the Company's effective tax rate if recognized.

Interest and Penalties

The Company recognizes accrued interest and penalties related to unrecognized tax benefits in current income taxes and income tax expense on the Balance Sheets and Statement of Operations, respectively. The Company had no accrued interest as of December 31, 2016 and 2015.

Tax Regulatory Matters

During 2016, the Internal Revenue Service ("IRS") completed its examination of Voya Financial, Inc.'s consolidated return (including the Company) through tax year 2015. The audit settlements did not have a material impact on the Company. Voya Financial, Inc. (including the Company) is currently under audit by the IRS, and it is expected that the examination of tax year 2016 may be finalized within the next twelve months. Voya Financial, Inc. (including the Company) and the IRS have agreed to participate in the Compliance Assurance Process for the tax years 2016 and 2017.

The Company does not expect any material changes in the amount of the unrecognized tax benefit of $1.9 within the next twelve months. The timing of a payment (if any) associated with the unrecognized tax benefit cannot be reliably estimated.

12. Benefit Plans

Defined Benefit Plan

Voya Services Company sponsors the Voya Retirement Plan (the "Retirement Plan"). Substantially all employees of Voya Services Company and its affiliates (excluding certain employees) are eligible to participate, including the Company's employees.

The Retirement Plan is a tax qualified defined benefit plan, the benefits of which are guaranteed (within certain specified legal limits) by the Pension Benefit Guaranty Corporation ("PBGC"). Beginning January 1, 2012, the Retirement Plan adopted a cash balance pension formula instead of a final average pay ("FAP") formula, allowing all eligible employees to participate in the Retirement Plan. Participants will earn an annual credit equal to 4% of eligible compensation. Interest is credited monthly based on a 30-year U.S. Treasury securities bond rate published by the Internal Revenue Service in the preceding August of each year. The accrued vested cash pension balance benefit is portable; participants can take it if they leave the Company.

The costs allocated to the Company for its employees' participation in the Retirement Plan were $2.1, $1.7 and $2.1, for the years ended December 31, 2016, 2015 and 2014, respectively, and are included in Operating expenses in the Statements of Operations.

Defined Contribution Plan

Voya Services Company sponsors the Voya Savings Plan and ESOP (the "Savings Plan"). Substantially all employees of Voya Services Company and its affiliates (excluding certain employees) are eligible to participate, including the Company's employees other than Company agents. The Savings Plan is a tax qualified defined contribution and stock bonus plan, which includes an employee stock ownership plan component. Savings Plan benefits are not guaranteed by the PBGC. The Savings Plan allows eligible participants to defer into the Savings Plan a specified percentage of eligible compensation on a pretax basis. Voya Services Company matches such pre-tax contributions, up to a maximum of 6.0% of eligible compensation, subject to IRS limits. Matching contributions are subject to a 4-year graded vesting schedule. Contributions made to the Savings Plan are subject to certain limits imposed by applicable law. The costs allocated to the Company for the Savings Plan were $3.2, $3.0 and $3.3, for the years ended December 31, 2016, 2015 and 2014, respectively, and are included in Operating expenses in the Statements of Operations.

Non-Qualified Retirement Plans

Effective December 31, 2001, the Company, in conjunction with Voya Services Company, offers certain eligible employees (other than Career Agents) a Supplemental Executive Retirement Plan and an Excess Plan (collectively, the "SERPs"). Benefits under the SERPs are determined based on an eligible employee's years of service and average annual compensation for the highest five years during the last ten years of employment.

Effective January 1, 2012, the Supplemental Executive Retirement Plan was amended to coordinate with the amendment of the Retirement Plan from its current final average pay formula to a cash balance formula.

The SERPs are non-qualified defined benefit pension plans, which means all the SERPs benefits are payable from the general assets of the Company. These non-qualified defined benefit pension plans are not guaranteed by the PBGC.

Obligations and Funded Status

The following table summarizes the benefit obligations for the SERPs as of December 31, 2016 and 2015:

	Year Ended December 31,	
	2016	2015
Change in benefit obligation:		
Benefit obligation, January 1	$ 21.6	$ 23.5
Interest cost	1.0	1.0
Benefits paid	(1.3)	(1.7)
Actuarial (gains) losses on obligation	1.1	(1.2)
Benefit obligation, December 31	$ 22.4	$ 21.6

Amounts recognized on the Balance Sheets in Other liabilities and in AOCI were as follows as of December 31, 2016 and 2015:

	December 31,	
	2016	2015
Accrued benefit cost	$ (22.4)	$ (21.6)
Accumulated other comprehensive income (loss):		
Prior service cost (credit)	(0.1)	(0.1)
Net amount recognized	$ (22.5)	$ (21.7)

Assumptions

The weighted-average assumptions used in the measurement of the December 31, 2016 and 2015, benefit obligation for the SERPs were as follows:

	2016	2015
Discount rate	4.55%	4.81%
Rate of compensation increase	4.00%	4.00%

In determining the discount rate assumption, the Company utilizes current market information provided by its plan actuaries, including a discounted cash flow analysis of the Company's pension obligation and general movements in the current market environment. The discount rate modeling process involves selecting a portfolio of high quality, noncallable bonds that will match the cash flows of the SERP. Based upon all available information, it was determined that 4.55% was the appropriate discount rate as of December 31, 2016, to calculate the Company's accrued benefit liability.

The weighted-average assumptions used in calculating the net pension cost were as follows:

	2016	2015	2014
Discount rate	4.81%	4.36%	4.95%
Rate of compensation increase	4.00%	4.00%	4.00%

Since the benefit plans of the Company are unfunded, an assumption for return on plan assets is not required.

Net Periodic Benefit Costs

Net periodic benefit costs for the SERPs were as follows for the years ended December 31, 2016, 2015 and 2014:

	Year Ended December 31,		
	2016	2015	2014
Interest cost	$ 1.0	$ 1.0	$ 1.0
Amortization of prior service cost (credit)	-	-	-
Net (gain) loss recognition	1.1	(1.2)	3.9
Net periodic (benefit) cost	$ 2.1	$ (0.2)	$ 4.9

Cash Flows

In 2017, the Company is expected to contribute $1.2 to the SERPs. Future expected benefit payments related to the SERPs for the years ended December 31, 2017 through 2021, and thereafter through 2026, are estimated to be $1.2, $1.2, $1.4, $1.3, $1.3 and $6.9, respectively.

Share Based Compensation Plans

Certain employees of the Company participate in the 2013 and 2014 Omnibus Employee Incentive Plans ("the Omnibus Plans") sponsored by Voya Financial, Inc., with respect to awards granted in 2013 through 2015. Certain employees also participate in various ING Group share-based compensation plans with respect to awards granted prior to 2013. Upon closing of the IPO, certain awards granted by ING Group that, upon vesting, would have been issuable in the form of American Depository Receipts ("ADRs") of ING Group were converted into performance shares or restricted stock units ("RSUs") under the Omnibus Plans, that upon vesting, will be issuable in Voya Financial, Inc. common stock.

The Company was allocated compensation expense from Voya Financial, Inc. and ING Group of $12.0, $12.0 and $14.4, for the years ended December 31, 2016, 2015 and 2014, respectively.

The Company recognized tax benefits of $4.9, $5.6 and $5.1 in December 31, 2016, 2015 and 2014, respectively. Excess tax benefits are recognized in Additional paid-in capital and are accounted for in a single pool available to all share-based compensation awards. Excess tax benefits in Additional paid-in capital are not recognized until the benefits result in a reduction in taxes payable. The Company uses tax law ordering when determining when excess tax benefits have been realized.

Other Benefit Plans

In addition to providing retirement plan benefits, the Company, in conjunction with Voya Services Company, provides certain supplemental retirement benefits to eligible employees and health care and life insurance benefits to retired employees and other eligible dependents. The supplemental retirement plan includes a non-qualified defined benefit pension plan and a non-qualified defined contribution plan, which means all benefits are payable from the general assets of the Company. The postretirement health care plan is contributory, with retiree contribution levels adjusted annually and the Company subsidizes a portion of the monthly per-participant premium. Beginning August 1, 2009, the Company moved from self-insuring its supplemental health care costs and began to use a private-fee-for-service Medicare Advantage program for post-Medicare eligible retired participants. In addition, effective October 1, 2009, the Company no longer subsidizes medical premium costs for early retirees. This change does not impact any participant currently retired and receiving coverage under the plan or any employee who is eligible for coverage under the plan and whose employment ended before October 1, 2009. The Company continues to offer access to medical coverage until retirees become eligible for Medicare. The life insurance plan provides a flat amount of noncontributory coverage and optional contributory coverage. The Voya Financial, Inc. Deferred Compensation Savings Plan is a non-qualified deferred compensation plan that includes a 401(k) excess component. The benefits charges allocated to the Company related to all of these plans for the years ended December 31, 2016, 2015 and 2014, were $3.5, $3.5 and $3.6, respectively.

13. Commitments and Contingencies

Leases

The Company leases its office space and certain equipment under operating leases, the longest term of which expires in 2017.

For the years ended December 31, 2016, 2015 and 2014, rent expense for leases was $6.1, $5.4 and $7.1, respectively. The future net minimum payment under non-cancellable leases for the year ended December 31, 2017 is estimated to be $5.3 and none thereafter. Lease expenses not paid directly by the Company were paid for by an affiliate and allocated to the Company.

Commitments

Through the normal course of investment operations, the Company commits to either purchase or sell securities, mortgage loans, or money market instruments, at a specified future date and at a specified price or yield. The inability of counterparties to honor these commitments may result in either a higher or lower replacement cost. Also, there is likely to be a change in the value of the securities underlying the commitments. As of December 31, 2016 and 2015, the Company had off-balance sheet commitments to acquire mortgage loans of $261.3 and $323.6, respectively, and purchase limited partnerships and private placement investments of $366.2 and $285.9, respectively.

Federal Home Loan Bank Funding

The Company is a member of the FHLB of Des Moines and is required to pledge collateral to back funding agreements issued to the FHLB. As of December 31, 2016 and 2015, the Company had $200.1 and $950.4, respectively, in non-putable funding agreements, including accrued interest, issued to the FHLB. These non-putable funding agreements are included in Future policy benefits and contract owner account balances on the Balance Sheets. As of December 31, 2016 and 2015, assets with a market value of $235.7 and $1,096.0, respectively, collateralized the funding agreements to the FHLB. Assets pledged to the FHLB are included in Fixed maturities, available-for-sale, at fair value on the Balance Sheets.

Restricted Assets

The Company is required to maintain assets on deposit with various regulatory authorities to support its insurance operations. The Company may also post collateral in connection with certain securities lending, repurchase agreements, funding agreements, letter of credit ("LOC") and derivative transactions as described further in this note. The components of the fair value of the restricted assets were as follows as of the dates indicated:

	December 31,	
	2016	**2015**
Fixed maturity collateral pledged to FHLB[1]	$ 235.7	$ 1,096.0
FHLB restricted stock[2]	18.0	48.0
Other fixed maturities-state deposits	10.5	11.5
Securities pledged[3]	748.2	672.4
Total restricted assets	$ 1,012.4	$ 1,827.9

[1] Included in Fixed maturities, available-for-sale, at fair value on the Balance Sheets.
[2] Included in Other investments on the Balance Sheets.
[3] Includes the fair value of loaned securities of $270.9 and $147.9 as of December 31, 2016 and 2015, respectively. In addition, as of December 31, 2016 and 2015, the Company delivered securities as collateral of $477.3 and $524.5, respectively. Loaned securities and securities delivered as collateral are included in Securities pledged on the Balance Sheets.

Litigation, Regulatory Matters and Loss Contingencies

Litigation, regulatory and other loss contingencies arise in connection with the Company's activities as a diversified financial services firm. The Company is a defendant in a number of litigation matters arising from the conduct of its business, both in the ordinary course and otherwise. In some of these matters, claimants seek to recover very large or indeterminate amounts, including

compensatory, punitive, treble and exemplary damages. Modern pleading practice in the U.S. permits considerable variation in the assertion of monetary damages and other relief. Claimants are not always required to specify the monetary damages they seek or they may be required only to state an amount sufficient to meet a court's jurisdictional requirements. Moreover, some jurisdictions allow claimants to allege monetary damages that far exceed any reasonably possible verdict. The variability in pleading requirements and past experience demonstrates that the monetary and other relief that may be requested in a lawsuit or claim often bears little relevance to the merits or potential value of a claim. Litigation against the Company includes a variety of claims including negligence, breach of contract, fraud, violation of regulation or statute, breach of fiduciary duty, negligent misrepresentation, failure to supervise, elder abuse and other torts.

As with other financial services companies, the Company periodically receives informal and formal requests for information from various state and federal governmental agencies and self-regulatory organizations in connection with inquiries and investigations of the products and practices of the Company or the financial services industry. It is the practice of the Company to cooperate fully in these matters. Regulatory investigations, exams, inquiries and audits could result in regulatory action against the Company. The potential outcome of such action is difficult to predict but could subject the Company to adverse consequences, including, but not limited to, settlement payments, additional payments to beneficiaries and additional escheatment of funds deemed abandoned under state laws. They may also result in fines and penalties and changes to the Company's procedures for the identification and escheatment of abandoned property or the correction of processing errors and other financial liability.

The outcome of a litigation or regulatory matter is difficult to predict and the amount or range of potential losses associated with these or other loss contingencies, requires significant management judgment. It is not possible to predict the ultimate outcome or to provide reasonably possible losses or ranges of losses for all pending regulatory matters, litigation, and other loss contingencies. While it is possible that an adverse outcome in certain cases could have a material adverse effect upon the Company's financial position, based on information currently known, management believes that neither the outcome of pending litigation and regulatory matters, nor potential liabilities associated with other loss contingencies, are likely to have such an effect. However, given the large and indeterminate amounts sought in certain litigation and the inherent unpredictability of all such matters, it is possible that an adverse outcome in certain of the Company's litigation or regulatory matters, or liabilities arising from other loss contingencies, could, from time to time, have a material adverse effect upon the Company's results of operations or cash flows in a particular quarterly or annual period.

For some matters, the Company is able to estimate a possible range of loss. For such matters in which a loss is probable, an accrual has been made. For matters where the Company, however, believes a loss is reasonably possible, but not probable, no accrual is required. For matters for which an accrual has been made, but there remains a reasonably possible range of loss in excess of the amounts accrued or for matters where no accrual is required the Company develops an estimate of the unaccrued amounts of the reasonably possible range of losses. As of December 31, 2016, the Company estimates the aggregate range of reasonably possible losses, in excess of any amounts accrued for these matters as of such date, is not material to the Company.

For other matters, the Company is currently not able to estimate the reasonably possible loss or range of loss. The Company is often unable to estimate the possible loss or range of loss until developments in such matters have provided sufficient information to support an assessment of the range of possible loss, such as quantification of a damage demand from plaintiffs, discovery from plaintiffs and other parties, investigation of factual allegations, rulings by a court on motions or appeals, analysis by experts and the progress of settlement discussions. On a quarterly and annual basis, the Company reviews relevant information with respect to litigation and regulatory contingencies and updates the Company's accruals, disclosures and reasonably possible losses or ranges of loss based on such reviews.

14. Related Party Transactions

Operating Agreements

The Company has certain agreements whereby it generates revenues and incurs expenses with affiliated entities. The agreements are as follows:

- Underwriting and distribution agreement with Directed Services LLC ("DSL") (successor by merger to Directed Services, Inc.), an affiliated broker-dealer, whereby DSL serves as the principal underwriter for variable insurance products issued by the Company. DSL is authorized to enter into agreements with broker-dealers to distribute the Company's variable

products and appoint representatives of the broker-dealers as agents. For the years ended December 31, 2016, 2015 and 2014, commissions were incurred in the amounts of $172.9, $198.3 and $217.0, respectively.

- Asset management agreement with Voya Investment Management LLC ("VIM"), an affiliate, in which VIM provides asset management, administration and accounting services for VIAC's general account. The Company records a fee, which is paid quarterly, based on the value of the assets under management. For the years ended December 31, 2016, 2015 and 2014, expenses were incurred in the amounts of $56.7, $52.8 and $48.1, respectively.

- Intercompany agreement with DSL pursuant to which DSL agreed, effective January 1, 2010, to pay the Company, on a monthly basis, a portion of the revenues DSL earns as investment adviser to certain U.S. registered investment companies that are investment options under certain of the Company's variable insurance products. For the years ended December 31, 2016, 2015 and 2014, revenue under the DSL intercompany agreement was $116.5, $115.5 and $139.9, respectively.

- Intercompany agreement with VIM pursuant to which VIM agreed, effective January 1, 2010, to pay the Company, on a monthly basis, a portion of the revenues VIM earns as investment adviser to certain U.S. registered investment companies that are investment options under certain of the Company's variable insurance products. For the years ended December 31, 2016, 2015 and 2014, revenue under the VIM intercompany agreement was $41.8, $44.3 and $41.8, respectively.

- Services agreements with Voya Services Company dated September 1, 2000 and January 1, 2001, respectively, for administrative, management, financial, information technology and finance and treasury services. For the years ended December 31, 2016, 2015 and 2014, expenses were incurred in the amounts of $133.3, $135.2 and $106.9, respectively. Effective October 1, 2010, the services agreement with Voya Services Company dated January 1, 2001, was amended in order for the Company to provide Voya Services Company with use of the corporate office facility at 5780 Powers Ferry Road, N.W., Atlanta, GA (the "Atlanta Office") in exchange for Voya Services Company's payment of the Company's direct and indirect costs for the Atlanta Office.

- Amended and Restated Services agreement between the Company and its U.S. insurance company affiliates and other affiliates dated as of April 1, 2015, for administrative, management, professional, advisory, consulting and other services. For the years ended December 31, 2016, 2015 and 2014, expenses related to the agreements were incurred in the amount of $19.3, $15.0 and $13.2, respectively.

- Administrative Services Agreement between the Company, ReliaStar Life Insurance Company of New York ("RLNY"), an affiliate and other U.S. insurance company affiliates dated March 1, 2003, amended effective August 1, 2004, in which the Company and affiliates provide services to RLNY. For the years ended December 31, 2016, 2015 and 2014, revenue related to the agreement was $2.5, $2.2 and $2.3, respectively.

- Variable annuity and fixed insurance products issued by the Company are sold by Voya Financial Advisors, Inc. ("VFA"), an affiliate of the Company. For the years ended December 31, 2016, 2015 and 2014 commission expenses incurred by the Company were $9.5, $10.6 and $10.9, respectively.

Management and service contracts and all cost sharing arrangements with other affiliated companies are allocated in accordance with the Company's expense and cost allocation methods. Revenues and expenses recorded as a result of transactions and agreements with affiliates may not be the same as those incurred if the Company was not a wholly owned subsidiary of its Parent.

Reinsurance Agreements

Reinsurance Ceded

As of December 31, 2016 and 2015, total reserves ceded to affiliates were $6,750.8 and $5,019.9, respectively. For the years ended December 31, 2016, 2015 and 2014, premiums ceded to affiliates were $670.2, $404.5 and $502.5, respectively.

Waiver of Premium - Coinsurance Funds Withheld

Effective October 1, 2010, the Company entered into a coinsurance funds withheld agreement with its affiliate, SLDI. Under the terms of the agreement, the Company ceded to SLDI 100% of the group life waiver of premium liability (except for groups covered under rate credit agreements) assumed from RLI, related to the Group Annual Term Coinsurance Funds Withheld agreement between the Company and RLI described under "Reinsurance Assumed" below.

As of December 31, 2016 and 2015, the value of the funds withheld liability under this agreement was $154.9 and $170.6, respectively, which is included in Funds held under reinsurance treaties with affiliates on the Balance Sheets. In addition, as of December 31, 2016 and 2015, the Company had an embedded derivative under this agreement with a value of $(2.1) and $(5.6), respectively, which is recorded in Funds held under reinsurance treaties with affiliates on the Balance Sheets. As of December 31, 2016 and 2015, reserves ceded by the Company under this agreement were $183.9 and $203.6, respectively.

Guaranteed Living Benefit - Coinsurance and Coinsurance Funds Withheld

Prior to July 1, 2016, the Company had an amended and restated automatic reinsurance agreement with an affiliate, SLDI, on a combined coinsurance and coinsurance funds withheld basis, covering 100% of the benefits guaranteed under specific variable annuity guaranteed living benefit riders attached to certain variable annuity contracts issued by the Company on or after January 1, 2000. Also, prior to July 1, 2016, the Company had a services agreement with SLDI, under which the Company provided certain actuarial risk modeling consulting services to SLDI with respect to hedge positions undertaken by SLDI in connection with the reinsurance agreement. Additionally, prior to July 1, 2016, the Company and SLDI had an asset management services agreement, under which SLDI served as asset manager for the funds withheld account. SLDI retained its affiliate, VIM, as sub-advisor for the funds withheld account.

Effective July 1, 2016, SLDI acquired RRII, a Missouri life reinsurance captive, from its affiliate, ReliaStar Life Insurance Company and also effective July 1, 2016, RRII redomesticated from the State of Missouri to the State of Arizona. Effective July 1, 2016, the Company, SLDI and RRII entered into release, consent and novation agreements pursuant to which RRII assumed the variable annuity guaranteed living benefits previously reinsured to SLDI under the automatic reinsurance agreement; the services agreement from SLDI under which the Company provides certain actuarial risk modeling consulting services to SLDI with respect to hedge positions undertaken by SLDI in connection with the automatic reinsurance agreement; and SLDI's obligation to serve as asset manager for the funds withheld account under the asset management services agreement.

For the years ended December 31, 2016, 2015 and 2014, revenue related to the aforementioned services agreement was $9.6, $10.9, and $12.3, respectively.

The impacts of these agreements on the Balance Sheets as of the dates indicated are as follows:

	December 31,	
($ in millions)	2016	2015
Assets on deposit in trust	$ 6,504.5	$ 6,632.1
Funds withheld liability[1]	6,356.8	6,616.3
Embedded derivative[1]	147.6	15.8
Reserves ceded[2]	6,545.9	4,795.7
Deferred loss[3]	269.1	283.3

[1] Included in Funds held under reinsurance treaties with affiliates on the Balance Sheets.
[2] Included in Deposits, premiums receivable and reinsurance recoverable on the Balance Sheets.
[3] Included in Other assets on the Balance Sheets.

Multi-year Guaranteed Fixed Annuity - Coinsurance

Effective May 1, 2005, the Company entered into a coinsurance agreement with its affiliate, SLD. Under the terms of the agreement, SLD assumed and accepted the responsibility for paying, when due, 100% of the liabilities arising under the multi-year guaranteed fixed annuity contracts issued by the Company between January 1, 2001 and December 31, 2003. The coinsurance agreement was accounted for using the deposit method. In addition, the Company assigned to SLD all future premiums received by the Company attributable to the ceded contracts.

Under the terms of the agreement, the Company ceded $2.5 billion in account balances and transferred a ceding commission and $2.7 billion in assets to SLD, resulting in a realized capital gain of $47.9 to the Company, which reduced the ceding commission.

The coinsurance agreement was accounted for using the deposit method. As such, $2.7 billion of Deposit receivable from affiliate was established on the Balance Sheets. On September 25, 2015, the Company recaptured, via a commutation agreement, the multi-year guaranteed fixed annuity contracts ceded under the coinsurance agreement. Under the terms of the agreement, which was effective July 1, 2015, the Company received net assets in the amount of $618.7 in satisfaction of the deposit receivable balance and recognized a pre-tax loss of $4.2 in 2015. The Company incurred amortization expense of the negative ceding commission of $3.2 and $6.6 for the years ended December 31, 2015 and 2014, respectively, which is recorded in Other expense in the Statements of Operations.

Universal Life - Coinsurance

Effective January 1, 2000, the Company entered into a 100% coinsurance agreement with its affiliate, SLD, covering certain universal life policies which had been issued and in force as of, as well as any such policies issued after, the effective date of the agreement. As of December 31, 2016 and 2015, reserves ceded by the Company under this agreement were $21.0 and $20.6, respectively.

Guaranteed Investment Contract - Coinsurance

Effective August 20, 1999, the Company entered into a Facultative Coinsurance Agreement with its affiliate, SLD. Under the terms of the agreement, the Company facultatively cedes, from time to time, certain guaranteed investment contracts and funding agreements to SLD on a 100% coinsurance basis. The Company utilizes this reinsurance facility primarily for diversification and asset-liability management purposes in connection with this business. The coinsurance agreement is accounted for using the deposit method. As of December 31, 2016 and 2015, the deposit receivable was $157.8 and $155.3, respectively.

Reinsurance Assumed

As of December 31, 2016 and 2015, total reserves assumed from affiliates were $418.7 and $438.7, respectively. For the years ended December 31, 2016, 2015 and 2014, premiums assumed from affiliates were $436.1, $428.5 and $407.7, respectively.

Level Premium Term Life Insurance - Stop-loss

Effective January 1, 2012, the Company entered into a stop-loss agreement with RLI, which was amended and restated April 1, 2012, under which the Company agreed to indemnify RLI, and RLI agreed to reinsure with the Company, the aggregate mortality risk under the combined blocks of level premium term life insurance policies issued by RLI between January 1, 2009 and December 31, 2009 and also between January 1, 2012 and December 31, 2012. This coverage included certain level premium term life insurance policies assumed by RLI from RLNY under an Automatic Coinsurance Agreement effective March 1, 2008. Under the terms of the agreement, the Company will make benefit payments to RLI equal to the amount of claims in excess of the attachment point (equal to a percentage of net reinsurance premium) up to the maximum fully covered benefit. The stop-loss agreement is accounted for using the deposit method. A fee receivable from affiliate of $0.4 as of December 31, 2016 and 2015 is included in Other liabilities on the Balance Sheets. The fee is accrued and subsequently settled in cash each quarterly accounting period.

Group Annual Term - Coinsurance Funds Withheld

Effective December 31, 2008, the Company entered into a coinsurance funds withheld agreement with RLI for an indefinite duration. Under the terms of the agreement, the Company assumed 100% quota share of RLI's net retained liability under certain Employee Benefits Group Annual Term policies, including disability waiver of premium.

The initial premium of $219.9 was equal to the aggregate reserve assumed by the Company. Thereafter, premiums are equal to the total earned gross premiums collected by RLI from policyholders. RLI will retain all reinsurance premiums payable to the Company as funds withheld, as security for ceded liabilities and against which ceded losses will be offset. Monthly, the Company will receive or pay a net settlement. This agreement was amended and restated October 1, 2010 to better reflect the current investment environment and to modify the treatment of claims under certain policies under which claims are not paid in the form of a single lump sum; the underlying terms described above remained unchanged. (Please see also description of "Waiver of Premium Coinsurance Funds Withheld" agreement between the Company and SLDI under "Reinsurance Ceded" above). As of December 31, 2016 and 2015, reserves assumed by the Company under this agreement were $418.7 and $438.7, respectively.

As of December 31, 2016 and 2015, the value of the funds withheld by ceding companies under this agreement was $437.4 and $464.8, respectively, which is included in Deposits, premiums receivable and reinsurance recoverable on the Balance Sheets. In addition, as of December 31, 2016 and 2015, the Company had an embedded derivative under this agreement with a value of $(5.9) and $(15.6), respectively.

Reciprocal Loan Agreement

The Company maintains a reciprocal loan agreement with Voya Financial, Inc., an affiliate, to facilitate the handling of unanticipated short-term cash requirements that arise in the ordinary course of business. Under this agreement, which became effective in January 2004, and based upon its renewal on January 14, 2014, expires on January 14, 2024, either party can borrow from the other up to 3.0% of the Company's statutory net admitted assets, excluding Separate Accounts, as of the preceding December 31. For the years ended December 31, 2016, 2015 and 2014, interest on any borrowing by either the Company or Voya Financial, Inc. was charged at a rate based on the prevailing market rate for similar third-party borrowings or securities.

Under this agreement, the Company incurred minimal interest expense for the years ended December 31, 2016 and 2015. The Company did not incur interest expense for the year ended December 31, 2014. The Company earned interest income of $0.7, $0.7 and $0.2 for the years ended December 31, 2016, 2015 and 2014, respectively. Interest expense and income are included in Interest expense and Net investment income, respectively, in the Statements of Operations. As of December 31, 2016 and 2015, the Company did not have any outstanding receivable/payable with Voya Financial, Inc. under the reciprocal loan agreement.

Long-Term Debt with Affiliates

The Company issued a 30-year surplus note in the principal amount of $35.0 on December 8, 1999, to its affiliate, SLD, which matures on December 7, 2029. Interest is charged at an annual rate of 7.98%. Payment of the note and related accrued interest is subordinate to payments due to contract owners and claimant and beneficiary claims, as well as debts owed to all other classes of debtors, other than surplus note holders. Any payment of principal and/or interest made is subject to the prior approval of the Iowa Insurance Commissioner. Interest expense was $2.8 for the years ended December 31, 2016, 2015 and 2014.

On December 29, 2004, the Company issued surplus notes in the aggregate principal amount of $400.0 (the "Notes"), scheduled to mature on December 29, 2034, to its affiliates, Voya Retirement Insurance and Annuity Company, RLI and SLDI. The Notes bear interest at a rate of 6.26% per year. Any payment of principal and/or interest is subject to the prior approval of the Iowa Insurance Commissioner. Interest expense was $25.4 for the years ended December 31, 2016, 2015 and 2014.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

The Company carried out an evaluation, under the supervision and with the participation of its management, including its Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of the Company's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended ("Exchange Act")) as of the end of the period covered by this report. Based on that evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that the Company's current disclosure controls and procedures are effective in ensuring that material information relating to the Company required to be disclosed in the Company's periodic SEC filings is made known to them in a timely manner.

Management's Annual Report on Internal Control Over Financial Reporting

Management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) for the Company. The Company's internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements of the Company in accordance with U.S. generally accepted accounting principles. The Company's internal control over financial reporting includes those policies and procedures that:

- pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. generally accepted accounting principles and that receipts and expenditures are being made only in accordance with authorizations of the Company's management and directors; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management has assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2016. In making its assessment, management has used the criteria set forth in "Internal Control - Integrated Framework (2013)" issued by the Committee of Sponsoring Organizations of the Treadway Commission.

In the opinion of management, the Company has maintained effective internal control over financial reporting as of December 31, 2016.

Attestation Report of the Company's Registered Public Accounting Firm

This annual report does not include an attestation report of the Company's registered public accounting firm regarding internal control over financial reporting. Management's report was not subject to attestation by the Company's registered public accounting firm pursuant to Title IX, Section 989G of the Dodd-Frank Act, which provides non-accelerated filers such as the Company with an exemption from Section 404(b) of the Sarbanes-Oxley Act, the provision that otherwise requires an issuer to provide an attestation report by its registered public accounting firm on management's assessment of internal control over financial reporting.

Changes in Internal Control Over Financial Reporting

There were no changes in the internal control over financial reporting of the Company (as defined in Rule 13a-15(f) of the Exchange Act) that occurred during the quarter ended December 31, 2016 that have materially affected, or are reasonably likely to materially affect, these internal controls over financial reporting.

PART III

Item 10. Directors, Executive Officers and Corporate Governance

Omitted pursuant to General Instruction I(2) of Form 10-K, except with respect to compliance with Sections 406 and 407 of the Sarbanes-Oxley Act of 2002.

a. Code of Ethics for Financial Professionals
The Company has approved and adopted a Code of Ethics for Financial Professionals (which was filed as Exhibit 14 to the Company's Form 10-K, as filed with the Securities and Exchange Commission on March 29, 2004, File No. 033-87270), pursuant to the requirements of Section 406 of the Sarbanes-Oxley Act of 2002. Any waiver of the Code of Ethics will be disclosed by the Company by way of a Form 8-K filing.

b. Designation of Board Financial Expert
The Company has designated Michael S. Smith, Director, as its Board Financial Expert, pursuant to the requirements of Section 407 of the Sarbanes-Oxley Act of 2002. Because the Company is not subject to the requirements of Exchange Act Rule 10A-3, it does not have any outside directors sitting on its board.

Item 11. Executive Compensation

Omitted pursuant to General Instruction I(2) of Form 10-K.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

Omitted pursuant to General Instruction I(2) of Form 10-K.

Item 13. Certain Relationships, Related Transactions and Director Independence

Omitted pursuant to General Instruction I(2) of Form 10-K.

Item 14. Principal Accounting Fees and Services
(Dollar amounts in millions, unless otherwise stated)

In 2016 and 2015, Ernst & Young LLP ("Ernst & Young") served as the principal external auditing firm for Voya Financial, Inc., including Voya Insurance and Annuity Company ("VIAC" or the "Company", as appropriate). Voya Financial, Inc. subsidiaries, including VIAC, are allocated Ernst & Young fees attributable to services rendered by Ernst & Young to each subsidiary. Ernst & Young fees allocated to the Company along with a description of the services rendered by Ernst & Young to the Company are detailed below for the periods indicated.

	Year Ended December 31,	
	2016	2015
Audit fees	$ 2.0	$ 2.1
Audit-related fees	0.7	1.0
Tax fees	- *	- *
All other fees	- *	- *
	$ 2.7	$ 3.1

* Less than $0.1.

Audit Fees

Audit fees were allocated to VIAC and include fees associated with professional services rendered by the auditors for the audit of the annual financial statements of the Company and review of the Company's interim financial statements.

Audit-related Fees

Audit-related fees were allocated to VIAC for assurance and related services that are reasonably related to the performance of the audit or review of the financial statements and are not reported under the audit fee item above. These services consisted primarily of the audit of financial information supporting the Securities and Exchange Commission ("SEC") product filings.

Tax Fees

There were minimal tax fees allocated to VIAC in 2016 and 2015. Tax fees allocated to VIAC were primarily for tax compliance. These services consisted of tax compliance, including the review of tax disclosures and proper completion of tax forms, assistance with questions regarding tax audits and tax planning and advisory services related to common forms of domestic taxation (i.e., income tax and capital tax).

All Other Fees

There were minimal fees allocated to VIAC in 2016 and 2015 under the category "All other fees." Other fees allocated to VIAC under this category typically include fees paid for products and services other than the audit fees, audit-related fees and tax fees described above and consist primarily of advisory services.

Pre-approval Policies and Procedures

VIAC is subject to the pre-approval policies and procedures of Voya Financial, Inc. Audit, audit-related and non-audit services provided to the Company by the independent registered public accountants of Voya Financial, Inc. (the "External Auditor") are included in the total annual budgeted amounts for Voya Financial, Inc. and pre-approved by the audit committee of Voya Financial, Inc. (the "Voya Financial audit committee"). Pursuant to the pre-approval policies and procedures of Voya Financial, Inc., the Voya Financial audit committee is required to pre-approve all services provided by the External Auditor to Voya Financial, Inc. and its subsidiaries, including the Company. The pre-approval policies and procedures of Voya Financial, Inc. distinguish five types of services: (1) audit services, (2) audit-related services, (3) tax services, (4) other services that are not audit, audit-related, tax, or prohibited services and (5) prohibited services (as described in the Sarbanes-Oxley Act of 2002).

The pre-approval procedures of Voya Financial, Inc. consist of a general pre-approval procedure and a specific pre-approval procedure.

General Pre-approval Procedure

The Voya Financial audit committee pre-approves audit, audit-related, tax and other services to be provided by the External Auditor to Voya Financial, Inc. and its subsidiaries on an annual basis, and sets the maximum annual amount for such pre-approved services. Throughout the year, the Voya Financial audit committee receives from the External Auditor an overview of all services provided, including related fees and supported by sufficiently detailed information. The Voya Financial audit committee evaluates this overview quarterly. Additionally, the Voya Financial, Inc. Corporate Controller monitors the amounts paid versus the pre-approved amounts throughout the year.

Specific Pre-approval Procedure

In addition to the general pre-approval procedure of Voya Financial, Inc., each proposed External Auditor engagement by Voya Financial, Inc. or one of its subsidiaries that is expected to generate fees in excess of the pre-approved amounts, must be approved by the Voya Financial audit committee after recommendation of Voya Financial, Inc. management on a case-by-case basis.

In 2016, 2015 and 2014, 100% of each of the audit, audit-related services, tax services and all other services provided to the Company were pre-approved by the audit committee of Voya Financial, Inc.

PART IV

Item 15. Exhibits, Financial Statement Schedules

Report of Independent Registered Public Accounting Firm

The Board of Directors
Voya Insurance and Annuity Company

We have audited the financial statements of Voya Insurance and Annuity Company as of December 31, 2016 and 2015, and for each of the three years in the period ended December 31, 2016, and have issued our report thereon dated March 16, 2017 (included elsewhere in this Annual Report (Form 10-K)). Our audits also included the financial statement schedules, listed in Item 15.a. of this Annual Report (Form 10-K). These schedules are the responsibility of the Company's management. Our responsibility is to express an opinion on these schedules based on our audits.

In our opinion, the financial statement schedules referred to above, when considered in relation to the basic financial statements taken as a whole, present fairly, in all material respects, the information set forth therein.

Lease Year 7 (through July 31, 2025): $18.75 per square foot = $1,617,356.25 per year.

STANDARD OFFICE LEASE

THIS LEASE AGREEMENT (this "Lease") is made and entered into as of the 24th day of February, 2017 (the "Effective Date"), between Landlord and Tenant named below.

1. **THE PARTIES**.

(a) The name and address of Landlord is:

Employers Mutual Casualty Company
717 Mulberry Street
Des Moines, IA 50309
Contact: Cindy McCauley

(b) The name and address of Tenant is:

Voya Services Company
One Orange Way (C-4N)
Windsor, Connecticut 06095
Attn: Corporate Real Estate

2. **BUILDING, PREMISES AND COMMON AREAS**.

(a) The name and address of the building (the "Building") in which the Premises are located is:

Hub Tower, 699 Walnut Street, Des Moines, Iowa. The Building is located on the land described on the attached Exhibit A-1 and depicted on the site plan attached to this Lease as Exhibit A-2.

(b) The premises (the "Premises") covered by this Lease are as shown on the attached Exhibit B (which exhibit also depicts the Premises in relation to the Building's floorplate for each floor occupied by Tenant), and comprise approximately 86,122 rentable square feet of office space, plus approximately 1,210 square feet of basement storage space. The rentable and usable square foot areas for each floor occupied by Tenant have been established using the current Building Owners and Managers Association International ANSI Z 65.1 method of measurement, Copyright 1990 (the "BOMA Method") and are as follows:

6th FLOOR 15,518 rentable square feet
13,295 usable square feet

7th FLOOR 15,518 rentable square feet
13,295 usable square feet

8th FLOOR 15,518 rentable square feet
13,295 usable square feet

9th FLOOR 15,518 rentable square feet
13,295 usable square feet

10th FLOOR 15,518 rentable square feet
13,295 usable square feet

13th FLOOR 8,669 rentable square feet
7,322 usable square feet

TOTAL 86,259 rentable square feet
73,797 usable square feet

In addition to the Premises, Tenant shall have the exclusive right to use the approximately 1,210 square feet of storage space (the "Storage Area") depicted on Exhibit I for no additional charge. The Storage Area shall not be subject to additional rent and shall not be included in Tenant's proportionate share, but shall be included in Tenant's insurance coverages as provided herein. The Premises shall not be subject to remeasurement.

(c) Tenant and its invitees shall have the non-exclusive right to use, in common with Landlord and other tenants, those areas within the Property (as hereinafter defined), including the Building's entrances, lobbies, corridors, main elevators, freight elevators, loading facilities, roof, accessways, lavatories, skywalk bridges adjacent to and abutting the Building, driveways, public and fire stairways, sidewalks, exterior ramps, parking facilities, risers, plenums, conduits and utility rooms, and other similar areas which enable Tenant to obtain full use and enjoyment of the Premises for all customary purposes (the "Common Areas")subject to those reasonable Rules and Regulations established from time to time by Landlord and defined below.

(d) The Building, the Premises, the Common Areas, the land and any other improvements on the land are hereinafter collectively referred to as the "Property."

(e) In addition to Tenant's rights pursuant to Paragraphs 29 and 30 hereof, Tenant shall have the right, at any time prior to the execution by Landlord of the contract with the General Contractor for the Preparation Work (both terms as defined in Paragraph 20 hereof), to increase or decrease the rentable area of the Premises up to a change of fifteen percent (15%). In the event that Tenant elects to increase or decrease the rentable area of the Premises and timely notifies Landlord before execution of the contract, then (A) the rentable area of the Premises, the Annual Base Rent, and Tenant's Proportionate Share payable under this Lease shall be recomputed accordingly and an amendment reflecting these adjustments shall be executed by Landlord and Tenant within thirty (30) days of Tenant's election to increase or reduce the rentable area of the Premises; and (B) Tenant will provide Landlord with revised floor plans reflecting any changes within the Premises and execute a change order, if necessary, to grant Landlord a reasonable period of time to construct the Premises as modified.

3. **LEASING CLAUSE; QUIET ENJOYMENT**. Landlord represents that it is the fee simple owner of the Property and has full right and authority to make this Lease. Landlord hereby leases the Premises to Tenant and Tenant hereby accepts the same from Landlord, in accordance with the provisions of this Lease. Landlord covenants that Tenant shall have peaceful and quiet enjoyment of the Premises during the Term (as defined below) of this Lease, subject to the terms hereof.

4. **USE OF PREMISES**. Tenant may use and occupy the Premises for general office purposes, and uses incidental thereto.

5. **TERM**.

(a) The term of this Lease (the "Term") shall begin thirty (30) days after the later to occur of (i) the date of Substantial Completion (as defined below) of the entire Premises or (ii) the date Landlord has given Tenant written notice that the Preparation Work (as defined in Paragraph 20) is Substantially Complete (the "Commencement Date") and shall end on that date which is the last day of the ninety-first (91st) full calendar month following the Commencement Date (the "Expiration Date"), unless: (i) sooner terminated in accordance with the terms and conditions contained in this Lease; or (ii) extended pursuant to the provisions of this Lease. In no event shall the Commencement Date occur prior to January 1, 2018. Landlord and Tenant agree to execute an amendment to this Lease establishing the Commencement Date and the Expiration Date, and, if applicable, the revised rentable area and usable area of the Premises, the Annual Base Rent, the monthly rent installment and Tenant's Proportionate Share developed through the operation of Subparagraph 2(b) of this Lease.

(b) "Substantial Completion" and "Substantially Complete" shall mean that all of the following conditions have been satisfied: (i) Landlord has secured and delivered to Tenant the required permanent certificate of occupancy (or the substantial equivalent under applicable state or local law) to permit full use and occupancy of the Building, the Premises and the Common Areas for the purposes permitted under this Lease; (ii) construction of the improvements to the Premises has been completed in accordance with the Preparation Plans (as defined in Paragraph 20 hereof), as reasonably determined by Tenant, subject only to normal punch list items that will not interfere with Tenant's business operations, a list of which shall be delivered to Landlord by Tenant's architect, and which items Landlord agrees to use its best efforts to correct by the Commencement Date, but in no event later than thirty (30) days after the Commencement Date; and (iii) a certification by Tenant's architect, consented to and approved by Landlord and Landlord's architect, has been delivered to Tenant, stating that: (A) the proper federal, state, county, regional and local authorities, including those having jurisdiction over applicable zoning, building, health, safety and environmental regulations, have issued all licenses, permits, approvals and consents necessary in connection with the construction and lawful occupancy by Tenant of the Premises for the purposes permitted in Paragraph 4; (B) all of the "Preparation Work," as hereinafter defined, and all approved changes thereto comply with the provisions of Paragraphs 14 and 19 hereof and with any private covenants applicable to the Property generally; (C) all of the Property is complete, in clean and first-class condition, and where applicable, in working order, such that Landlord may perform its obligations in the manner required by this Lease; and (D) the rentable area of the Premises and the Building are as shown on the schedule to such certification and that such areas have been calculated in accordance with the BOMA Method, based on the supporting calculation attached to such certification.

(c) Landlord will use all commercially reasonable efforts to Substantially Complete respective portions of the Premises on or before the respective dates set forth in 6(a) of the Lease Summary Sheet (for such portions of the Premises, the applicable "Scheduled Substantial Completion Date"). If any such portion of the Premises is not Substantially Complete by the date that is five (5) days following the applicable Scheduled Substantial Completion Date, then (i) for the 8th and 13th Floor premises respectively, Tenant shall be entitled to a credit, in the amount of two (2) days of Annual Base Rent for the entire Premises, for every day that any such portion the Premises are not Substantially Completed, to be applied against Annual Base Rent otherwise due and payable as of the Commencement Date, (ii) for the 6th, 7th, 9th and 10th Floor premises, Tenant shall be entitled to a credit, in the amount of two (2) days of Annual Base Rent prorated for the portion of the Premises not delivered timely, for every day that any such portion the Premises are not Substantially Completed, to be applied against Annual Base Rent otherwise due and payable as of the Commencement Date until the date that is two (2) weeks after the Scheduled Completion Date for such portion of the Premises, whereupon such credit shall be calculated as two (2) days of Annual Base Rent for the entire Premise for every day that such portion of

the Premises are not Substantially Completed. Notwithstanding the foregoing, Landlord shall not be liable for more than one such daily penalty for any concurrent delays with respect to multiple portions of the Premises; and further provided that Landlord shall not be responsible for any credit to the extent that the delay is caused in whole or in part by acts or omissions of Tenant, or if the design and plans are not timely completed as provided herein, subject to a five (5) day grace period for Tenant's delivery of the design and plans (by way of example, if completed design and plans are delayed by seven (7) days, all other dates set forth herein shall be delayed by two (2) days). If any portion of the Premises is not Substantially Complete within ninety (90) days after the Scheduled Substantial Completion Date, then Tenant shall have the right to terminate this Lease by giving Landlord ten (10) days' prior written notice. Regarding the construction of the server room on the 8th Floor (the "Server Room") the parties shall cooperate in good faith as to the construction and installation of information technology related infrastructure equipment to allow the full functionality of Tenant's Server Room by September 1, 2017. Notwithstanding the foregoing, three (3) weeks prior to the Scheduled Substantial Completion Dates, Landlord shall provide access to Tenant in the respective portion of the Premises for installation of its furniture, fixtures and equipment.

(d) Tenant may, but shall not be required to, take occupancy of the Premises prior to the Commencement Date.

(e) If the Commencement Date has not occurred within two (2) years of the date of this Lease, the Lease shall terminate without further action of either party.

6. **ANNUAL BASE RENT**.

(a) Following a six (6) month free rent period, the Annual Base Rent is as set forth in Paragraph 7 of the Lease Summary Sheet and shall be payable in monthly installments on the date that is six (6) months after the Commencement Date (the "Rent Commencement Date"), and thereafter, for each month through and including the Expiration Date. The term "Lease Year" shall mean the one year period commencing on the Rent Commencement Date, and each subsequent year. Rent for any partial month shall be equitably prorated. Annual Base Rent shall be paid by a check mailed by the first business day of each month to the following address: Attn: Facilities Department, Employers Mutual Casualty Company, 717 Mulberry Street, Des Moines, IA 50309, or any other address provided to Tenant by Landlord in accordance with Paragraph 32 of the Lease, or at Tenant's option, by wire transfer, pursuant to wire instructions provided to Tenant upon request.

Notwithstanding the foregoing, Tenant shall pay rent for the first month payable hereunder by the date that is ninety (90) days following the full execution and delivery of this Lease.

(b) Landlord and Tenant acknowledge that a portion of Annual Base Rent is allocable to the initial cost of providing electricity and janitorial services to the Premises. In the event that Tenant exercises its right to install separate metering for electricity in the Premises and provide its own electricity in accordance with Paragraph 27, Annual Base Rent shall be reduced, on a per rentable square foot basis by the greater of (i) the actual cost per rentable square foot paid by Landlord to provide electricity to the Premises for the Base Year (as hereinafter defined), or (ii) two and 22/100 Dollars ($2.22 PSF), which is the estimated cost per rentable square foot to provide electricity to the Premises for the Base Year, listed on Exhibit C attached hereto and made a part hereof, and Building Operating Expenses (for the Base Year and for all Computation Years) shall thereafter not include the cost of electricity for leasable areas of the Building. In the event that Tenant exercises its right to provide its own janitorial services in accordance with Paragraph 26, Annual Base Rent shall be reduced on a per rentable square foot basis, by the greater of (i) the actual cost per rentable square foot paid by Landlord to provide

janitorial services to the Premises for the Base Year; or (ii) one and 23/100 Dollars ($1.23 PSF), which is the estimated cost per rentable square foot to provide janitorial services to the Premises for the Base Year, listed in Exhibit C hereto, and Building Operating Expenses (for the Base Year and for all Computation Years) shall thereafter not include the cost of janitorial services for leasable areas of the Building.

7. **ANNUAL ADDITIONAL RENT**.

(a) For the purpose of this Paragraph 7:

(i) Base Year shall mean the calendar year 2018;

(ii) Computation Year shall mean each full twelve (12) calendar months subsequent to the Base Year through the end of the Term;

(iii) Property shall mean only the Building and the land fairly and equitably allocated to the Building;

(iv) Tenant's Proportionate Share shall mean the ratio, expressed as a percentage, of the rentable square feet of the Premises occupied by Tenant, measured pursuant to the BOMA Method, to the entire rentable area in the Building, which is 283,314 rentable square feet. Tenant's Proportionate Share is thirty and forty one-hundredths percent (30.45%);

(v) Real Estate Taxes shall mean all taxes, assessments, SSMIDs (Self-Supported Municipal Improvement Districts), levies and other charges, which are assessed, levied or charged upon the Property during any calendar year or portion thereof throughout the Term and which have been finally determined by legal proceedings or otherwise to be legally payable, less any abatement received by Landlord, any affiliate of Landlord or any tenant of the Property. Real Estate Taxes shall not include (A) any interest or penalties; (B) any capital levy, estate, succession, inheritance, transfer, sales, use or franchise taxes, or any income, profits, or revenue tax, assessment or charge imposed upon the rent received as such by the Landlord under this Lease; nor (C) any increase in property taxes solely due to a reassessment performed as a result of the sale or transfer of the Property. Annual increases in taxes payable by Tenant shall be calculated solely on any normal and ordinary increases in assessment valuation or levy rate for the Property. For the Base Year only, Real Estate Taxes shall mean an amount equal to the greater of (x) the actual Real Estate Taxes incurred during the Base Year, or (y) a good faith estimate of the Real Estate Taxes which will be incurred during the Base Year, as set forth in Exhibit C, which amount set forth in (x) or (y) shall be multiplied by a formula, mutually determined by Landlord and Tenant, necessary to adjust the Real Estate Taxes as if the Base Year were a full tax year in which the Building were ninety percent (90%) leased and occupied and the Property were fully assessed as if the improvements thereon were fully completed (the "Base Year Real Estate Taxes"); and

(vi) Building Operating Expenses shall mean the total actual out-of-pocket expenses paid by Landlord for the operation, maintenance and repair of the Property which are incurred during any calendar year or portion thereof throughout the Term, in accordance with sound property management principles, as applied to first-class office buildings. For the Base Year only, Building Operating Expenses shall mean an amount equal to the greater of (x) the actual Building Operating Expenses incurred during the Base Year, or (y) a good faith estimate of the Building Operating Expenses which will be incurred during the Base Year, as set forth in Exhibit C, which amount set forth in (x) or (y) shall be multiplied by a formula, mutually

determined by Landlord and Tenant, necessary to adjust the Building Operating Expenses as if the Base Year were a full year in which the Building were ninety percent (90%) leased and occupied and all initial warranties and service contracts for new equipment have expired (the "Base Year Building Operating Expenses"). In the event Landlord, during any Computation Year, undertakes any type of expense that was not incurred by Landlord during the Base Year, then the Building Operating Expenses for the Base Year will be adjusted to include the cost that Landlord would have incurred to undertake such expense in the Base Year.

Building Operating Expenses shall include the skywalk expenses or charges properly allocated to the Building pursuant to skywalk ordinances, skywalk agreements or agreement with the Kaleidoscope at the Hub.

Notwithstanding anything in this Lease to the contrary, the following expenses are excluded from Building Operating Expenses:

(A) Depreciation and amortization;

(B) Expenses incurred by Landlord to prepare, renovate, repaint, redecorate or perform any other work in any space leased to an existing tenant or prospective tenant of the Building;

(C) Expenses incurred by Landlord for repairs or other work occasioned by fire, windstorm, or other insurable casualty or condemnation;

(D) Expenses incurred by Landlord to lease space to new tenants or to retain existing tenants including leasing commissions, advertising and promotional expenditures;

(E) Expenses including, without limitation, legal fees and disbursements incurred by Landlord to resolve disputes, enforce or negotiate lease terms with prospective or existing tenants or in connection with any financing, sale or syndication of the Property;

(F) Interest, principal, points and fees, amortization or other costs associated with any debt and rent payable under any lease to which this Lease is subject and all costs and expenses associated with any such debt or lease and any ground lease rent, irrespective of whether this Lease is subject or subordinate thereto;

(G) Deleted.;

(H) Cost of alterations, capital improvements, equipment replacement and other items which under generally accepted accounting principles are properly classified as capital expenditures;

(I) expenses for the replacement of any item covered under warranty, to the extent of any reimbursement, exclusive of any deductible thereunder;

(J) Cost to correct any penalty or fine incurred by Landlord due to Landlord’s violation of any federal state, or local law or regulation in existence as of the

Effective Date and any interest or penalties due for late payment by Landlord of any of the Building Operating Expenses;

(K) Cost of repairs necessitated by Landlord's negligence or willful misconduct;

(L) Expenses for any item or service which Tenant pays directly to a third party or separately reimburses Landlord and expenses incurred by Landlord to the extent the same are reimbursable or reimbursed from any other tenants, occupants of the property, or third parties;

(M) Expenses for any item or service not provided to Tenant but which are provided to any other tenants in the Building;

(N) A property management fee for the Building in excess of the lesser of (i) the concurrent management contract obligation or (ii) four percent (4%) of the gross rents of the Building (exclusive of capital expenditures, tenant reimbursements and ancillary income from other tenants [e.g., income from antennae, or satellite dishes, paid parking, security deposits and interest thereon, etc.]) applicable to the Building for the relevant calendar year. Landlord shall charge the above management fee during the Base Year and all subsequent years;

(O) Compensation and benefits of (i) employees above the grade of building superintendent or building manager, and (ii) that portion of employee expenses for employees whose time is not spent directly in the operation of the Property;

(P) Landlord's general corporate overhead and administrative expenses except if it is solely for the Building;

(Q) Business interruption insurance or rental value insurance;

(R) Expenses incurred by Landlord in order to comply with the provisions of Subparagraphs 14(a) and 19(a) hereof, provided such conditions requiring compliance existed at the Building as of the Effective Date;

(S) Reserves;

(T) Fees paid to affiliates of Landlord to the extent that such fees exceed the customary amount charged for the services provided;

(U) The operating expenses incurred by Landlord relative to retail stores, hotels and any specialty service in the Building or on the Property;

(V) Deleted;

(W) Deleted;

(X) cost of sculptures, paintings and other objects of art;

(Y) costs associated with the removal of hazardous materials in violation of applicable environmental law located in leasable areas of the Building as of the Effective Date;

(Z) the excess over competitive costs by independent suppliers and contractors, of the cost of supplies and services provided by subsidiaries and affiliates of Landlord;

(AA) other items not customarily included as operating expenses for similar buildings;

(BB) all categories of costs not included in the Base Year calculation of operating costs for which the Base Year amount had not been adjusted, but specifically excluding new categories of cost already included in the Base Year calculation of operating costs as of the Effective Date but which are merely re-categorized in subsequent years;

(CC) any charge for Landlord's income tax, excess profit tax, franchise tax, or like tax on Landlord's business and tax penalties incurred as a result of Landlord's negligence, inability or unwillingness to make payments and/or to file any income tax or informational returns when due;

(DD) taxes assessed against the Building or Landlord for Tenant Improvements above the Building Standard;

(EE) cost of signs in or on the Building or complex identifying the owner of the Building or other tenants' signs;

(FF) assessments and premiums which are not specifically charged to Tenant because of what Tenant has done, which can be paid by Landlord in installments, shall be paid by Landlord in the maximum number of installments permitted by law and not included as operating expenses except in the year in which the assessment or premium installment is actually paid; provided, however, that if the prevailing practice of other comparable office buildings in the vicinity of the Building to pay such assessments or premiums on an earlier basis, such assessments or premiums shall be included in operating expenses as paid by Landlord; in no event, however, shall Landlord include any accrued interest (resulting from such assessments or premiums) in its computation of operating expenses;

(GG) costs arising from Landlord's charitable or political contributions;

(HH) rentals and other related expenses incurred in leasing HVAC systems, elevators or other equipment ordinarily considered to be Capital Items;

(II) the cost of any electric power used by any tenant in the Building in excess of the Building-standard amount, or electric power costs for which any tenant directly contracts;

(JJ) costs arising from the negligence or faults of other tenants, to the extent recouped by Landlord;

(KK) Deleted.

(LL) costs associated with the operation of the business of the partnership or entity which constitutes Landlord as the same are distinguished from the costs of operation of the Building;

(MM) costs of any "tap fees" or any sewer or water connection fees for the benefit of any particular tenant in the Building;

(NN) any expenses incurred by Landlord for use of any portions of the Building to accommodate events;

(OO) any entertainment, dining or travel expenses;

(PP) any unreasonable flowers, gifts, balloons, etc. provided to any entity whatsoever;

(QQ) any "finders fees", brokerage commissions, job placement costs or job advertising cost;

(RR) the cost of any magazine, newspaper, trade or other subscriptions;

(SS) the cost of any training or incentive programs, other than for tenant life safety information services;

(TT) the cost of any "tenant relations" parties, events or promotion; and

(UU) "In-house" legal and/or accounting fees.

(b) Subject to its rights to appeal and protest, Landlord shall pay before delinquency all Real Estate Taxes and Building Operating Expenses for the Property. In addition to the Annual Base Rent set forth in Paragraph 6, for each Computation Year during the Term, Tenant shall pay Landlord the following sums (collectively, "Annual Additional Rent"):

(i) Tenant's Proportionate Share of any increase in Real Estate Taxes over the Base Year Real Estate Taxes (the "Tax Payment"). The Tax Payment shall be made by Tenant in accordance with the terms of Subparagraph 7(c) and shall be subject to adjustment as provided for in this Paragraph 7; and

(ii) Tenant's Proportionate Share of any increase in Building Operating Expenses over the Base Year Building Operating Expenses (the "Operating Expense Payment"); provided, however, that for purposes of computing the Operating Expense Payment, Building Operating Expenses for any Computation Year shall not include an increase of more than five

percent (5%) over, with respect to the first Computation Year, Base Year Building Operating Expenses and with respect to any other Computation Year, the Building Operating Expenses for the preceding Computation Year on a non-cumulative basis. Notwithstanding the foregoing, expenses for insurance, debris removal and utilities shall not be subject to the foregoing limitation. The Operating Expense Payment shall be made by Tenant in accordance with the terms of Subparagraph 7(c) and shall be subject to adjustment as provided for in this Paragraph 7. Notwithstanding the foregoing, in the event Tenant vacates any entire floor or the 13th Floor of the Premises, prior to the end of the Term and continues to pay Tenant's Base Rent and Additional Rent on such vacated Premises, Tenant's share of Operating Expenses shall be equitably reduced by the reduction in services, maintenance and utilities at the vacated Premises. Upon notice of such vacancy, Landlord shall, without limitation: (i) reduce HVAC to a level necessary for safety of Building's systems only; (ii) permit reduced lighting; (iii) reduce the frequency and extent of the janitorial services to be commensurate with vacated space; and (iv) to likewise reduce the frequency and extent of any maintenance obligations. Upon Tenant's written request, Landlord shall provide Tenant with reasonable evidence of such reductions in Operating Expenses.

(c) Within ninety (90) days after the end of the Base Year and the end of each Computation Year, Landlord shall furnish to Tenant itemized statements certified by an authorized agent of Landlord setting forth the Base Year Real Estate Taxes and Base Year Building Operating Expenses, the Real Estate Taxes and Building Operating Expenses for the most recently completed Computation Year and Tenant's Tax Payment and Operating Expense Payment, if any. Such statement shall include any receipted tax bills for the Base Year and the relevant Computation Year and such supporting documentation as to Building Operating Expenses (including copies of all calculations) as Tenant shall reasonably require. Tenant shall pay the Tax Payment and Operating Expense Payment within sixty (60) days following receipt of the statement described above. In the event that Landlord fails to furnish Tenant with an itemized statement as described above within one (1) year after the end of any Computation Year, then Tenant shall not be required to pay any increase in Real Estate Taxes or Building Operating Expenses for that Computation Year, nor shall any such increase be included in the calculation for any subsequent Computation Year.

(d) Within one (1) year after receipt of any statement, Tenant shall have the right, by notice to Landlord, to dispute the inclusion and amount of any item or items in any statement. If Tenant shall dispute the inclusion or amount of any item or items in any statement within sixty (60) days after receipt of such statement, then Tenant shall pay the Operating Expense Payment and the Tax Payment, excluding the items or amounts in dispute. In the event that such a dispute is not settled within sixty (60) days after notice of such dispute has been delivered to Landlord, the dispute shall be determined by a firm of real estate audit professionals mutually acceptable to Landlord and Tenant ("Audit Professionals"). If Landlord and Tenant cannot agree on Audit Professionals within thirty (30) days, then Landlord and Tenant shall each, within fifteen (15) days, select one (1) independent firm of Audit Professionals, and such two (2) Audit Professionals shall together select a third firm of Audit Professionals, which third firm shall be the Audit Professionals who shall resolve the dispute. If Landlord fails to select its Audit Professionals within the aforesaid fifteen (15)-day period, then, to the extent that Tenant has previously paid Landlord for the items in dispute, Tenant shall have the right to deduct the amount of such items from any installments of Annual Base Rent, Annual Additional Rent or other charges due or becoming due under this Lease (the "Set-Off Rights"). The Audit Professionals shall be entitled to review all records relating to the disputed items. The determination of the Audit Professionals shall be final and binding upon both Landlord and Tenant and the Audit Professionals' expenses shall be borne by the party against whom the decision is rendered; provided, that if more than one item is disputed, the expenses shall

be apportioned equitably according to the number of items decided against each party and the amounts involved.

If the Audit Professionals determine that Tenant has made an underpayment, Tenant shall reimburse Landlord for the amount of the underpayment within thirty (30) days following such determination. If the Audit Professionals determine that Tenant has made an overpayment, Landlord shall reimburse Tenant for the amount of the overpayment within thirty (30) days following such determination. If Landlord shall fail to pay the same, Tenant shall have the Set-Off Rights.

Notwithstanding the foregoing provisions of this Subparagraph 7(d), Tenant shall have the right at any time within three (3) years of Rent Commencement to dispute the amount of Real Estate Taxes or Building Operating Expenses calculated for the Base Year. If the Audit Professionals determine that the amount of Real Estate Taxes or Building Operating Expenses for the Base Year should be increased, then Landlord shall reimburse Tenant, within thirty (30) days following such determination, for any overpayment of Additional Rent for all Computation years. If Landlord shall fail to pay the same, Tenant shall have the Set-Off Rights.

(e) Landlord shall promptly notify Tenant of any increase in Real Estate Taxes resulting from other than a general increase in the tax rate or an increase in the assessed value of the Property. Should Landlord fail to notify Tenant of any such increase prior to the expiration of any appeal rights, such increase shall not be included in the computation of Real Estate Taxes. Landlord shall take all reasonable steps to contest any such increase, and shall keep Tenant informed, with timely advice, of the steps being taken.

Further, in the event Landlord does not contest such tax increase, Tenant shall have the right to contest any such increase and shall keep Landlord informed of the steps being taken. Landlord agrees to fully cooperate with Tenant in prosecuting any appeal taken by Tenant as a result of such increase, at no cost or expense to Landlord. To the extent Tenant obtains any reduction as a result of such contest, Tenant shall have the right to setoff against the Annual Base Rent and the Annual Additional Rent due hereunder all reasonable costs and expenses, including reasonable attorneys' fees, incurred by Tenant in connection with such contest, provided the same shall not exceed the amount of the reduction in Real Estate Taxes obtained thereby.

(f) Tenant shall have the right to examine, to copy and to have an audit conducted of all books and records of Landlord pertaining to Building Operating Expenses and Real Estate Taxes. Such audit shall be conducted by an auditing firm retained by Tenant. All expenses of the audit shall be borne by Tenant unless such audit discloses an overstatement of Building Operating Expenses or Real Estate Taxes of five percent (5%) or more, in which case Landlord shall promptly reimburse Tenant for the cost of the audit. If Landlord fails to pay the same, Tenant shall have the Set-Off Rights. If the auditing firm determines that Tenant has made an underpayment, Tenant shall reimburse Landlord for the amount of the underpayment within thirty (30) days following such determination. If the auditing firm determines that Tenant has made an overpayment, Landlord shall reimburse Tenant for the amount of the overpayment within thirty (30) days following such determination. If Landlord shall fail to pay the same, Tenant shall have the Set-Off Rights. In the event Landlord disputes the findings of the audit, then Landlord and Tenant agree to submit any disputed items to the Audit Professionals for resolution pursuant to the terms of Subparagraph 7(d) and the Set-Off Rights shall not become effective until thirty (30) days after the determination of the Audit Professionals. Landlord shall maintain all books and records for a period of not less than three (3) years following the applicable Computation Year.

(g) The rights and obligations of Tenant and Landlord under this Paragraph 7 shall survive the expiration or earlier termination of the Lease, provided that Operating Expense Payments and Tax Payments shall be prorated to reflect any partial final year of the Term of the Lease.

8. **SUBLETTING OR ASSIGNMENT**.

(a) Subletting. Tenant shall have the right to sublet all or any portion of the Premises or grant licenses therein, with the consent of Landlord which shall not be unreasonably withheld or conditioned, provided:

(i) Tenant is not in default of the Lease beyond any applicable cure period;

(ii) Tenant provides Landlord with prior written notice of the sublease or license, at least thirty (30) days prior to the commencement date of the sublease or license;

(iii) Tenant delivers to Landlord an executed copy of the sublease or license within ten (10) days following the commencement date of the sublease or license;

(iv) Tenant remains liable to Landlord for the obligations of Tenant under the Lease; and

(v) If Landlord has not denied Tenant's request to sublet with specificity within fourteen (14) days of request, Landlord's consent to any such request shall be deemed to have been granted. It shall be deemed unreasonable for Landlord to withhold its consent A) based on the financial condition of any proposed sublet or the lack of any financial information) or B) if the proposed sublet is then a tenant in the Building or the complex in which the Building comprises a portion and the Landlord then has space comparable to the proposed sublet space available for lease for a term similar to the proposed sublease term.

Tenant shall, upon demand, reimburse Landlord for any out-of-pocket fees incurred by Landlord in connection with the review, execution, and delivery of such subletting request up to Two Hundred Fifty and 00/100 ($250.00) per request.

Landlord shall be entitled to Fifty percent (50%) of any additional rent or compensation payable to Tenant by reason of such sublease, net of the amortized amounts of Tenant's costs for such sublease including, without limitation, tenant improvements, concessions, brokerage fees and legal expenses and Tenant agrees to pay such amounts to Landlord with its monthly Rent. Notwithstanding the foregoing, such rent sharing shall not apply to a sublease with a bona fide affiliate of Tenant.

(b) Assignment.

(i) Tenant shall not be permitted to assign this Lease, without the prior written consent of Landlord, which consent shall not be unreasonably withheld or conditioned. It shall be deemed reasonable to withhold or condition such consent only if:

(A) the proposed assignee's business and reputation are not consistent with the business and reputation of the tenants then occupying; or

(B) the proposed assignee intends to use the Premises (or the applicable portion thereof) for a use (x) prohibited by this Lease; or

(C) the proposed assignee is then negotiating with Landlord for the rental of any comparable space in the Building for a term similar to the remaining term of this Lease.

(ii) In addition, if Tenant requires that Tenant shall have no liability to Landlord under this Lease as of the date of the assignment, than the proposed assignee must have a net worth, as determined by generally accepted accounting principles ("Net Worth") which is equal to any "Fortune 500 Company," as such term is generally recognized in the marketplace, otherwise Tenant shall remain liable under this Lease.

(iii) Tenant shall provide Landlord with the following information each time Tenant wishes to assign any interest in the Lease:

(A) Name and address of the proposed assignee;

(B) Brief description of the proposed assignee's business;

(C) If the provisions of Subparagraph 8(b)(ii) above apply, financial references or, if reasonably available, the proposed assignee's most recent balance sheet and income statements; and

(D) The proposed assignment and assumption agreement in form and substance reasonably satisfactory to Landlord, in which the assignee shall assume performance of all of the terms, covenants, conditions and obligations of Tenant pursuant to this Lease from and after the date of the proposed assignment. If Tenant is to be released of all liability to Landlord as of the date of assignment pursuant to the provisions of Subparagraph 8(b)(ii) above, the assignment instrument shall so state. Nothing contained in this Subparagraph shall limit or relieve Tenant's liability under this Lease prior to the date of the assignment.

(iv) Landlord shall have fifteen (15) days from the date on which Tenant has submitted to Landlord the information set forth in Subparagraph 8(b)(iii), to notify Tenant in writing of Landlord's rejection or consent to the proposed assignee. Landlord shall specify the reasons for rejection in any notice of rejection. In the event Landlord reasonably claims that any of the above information is incomplete, Landlord shall immediately notify Tenant, in writing, of such claim, and the fifteen (15) day period shall be extended by the number of days of Tenant's delay in delivering reasonably complete information to Landlord in accordance with Subparagraph 8(b)(iii) above. Landlord's consent shall be conclusively deemed given within the fifteen (15) day period, unless refused or delayed as described above.

(v) Notwithstanding the provisions of this Subparagraph 8(b), Tenant shall have the right to assign or transfer any interest in this Lease to a subsidiary, parent or an affiliate of Tenant, or a successor to Tenant by way of merger, consolidation, corporate reorganization or the purchase of all or substantially all of Tenant's, or any operating division of Tenant’s assets, each without Landlord's consent.

(vi) Notwithstanding anything to the contrary in this Paragraph 8, any transfer, sale, pledge or other disposition and/or power to vote the outstanding shares of corporate stock of Tenant shall not be deemed an assignment.

Tenant shall, upon demand, reimburse Landlord for any out-of-pocket fees incurred by Landlord in connection with the review, execution, and delivery of such assignment request up to Two Hundred Fifty and 00/100 ($250.00) per request.

(c) Estoppels and Nondisturbance for Subtenant. Landlord shall, at Tenant's reasonable request, (i) provide Tenant with an estoppel certificate stating whether Landlord knows of any defaults under this Lease at the time of any proposed subletting or assignment; and (ii) provide to any subtenant of Tenant an agreement in recordable form stating that Landlord will not disturb the possession of such subtenant due to an early termination of this Lease, but only upon the reasonable determination of Landlord at that time.

Tenant shall, upon demand, reimburse Landlord for any out-of-pocket fees incurred by Landlord in connection with the review, execution, and delivery of such estoppel request up to Two Hundred Fifty and 00/100 ($250.00) per request.

9. **INSPECTION AND REPAIR OF PREMISES**. Landlord may access, inspect and repair the Premises at reasonable times and after reasonable prior notice to Tenant (except prior notice shall not be required in emergencies). In accessing or making any inspection or performing maintenance or repairs to, or construction in, or around the Premises, Landlord shall use all commercially reasonable efforts to protect Tenant's property and personnel from loss and injury and to avoid interfering with the conduct of Tenant's business. Notwithstanding the forgoing, access to the Premises shall be only through use of Tenant’s access control system and keyed entry shall not be permitted except in an emergency. Landlord shall provide Tenant with a list of required access cards with registration information as to the identity of the cardholder and the purpose of each entry. Landlord shall adopt reasonable security protocols to ensure that only authorized parties have access to Tenant’s access cards for such purposes, and in such manner and, further, provide Tenant with reasonable evidence that such protocols have been implemented and are being followed.

10. **DAMAGE TO PREMISES**.

(a) If the Property or any portion thereof is damaged by fire or other casualty, then, except as provided below, the damage shall be promptly repaired by and at the expense of Landlord. Until such repairs and restoration are completed, and if the damage limits Tenant’s use of the Premises, the Annual Base Rent and Annual Additional Rent shall be equitably abated to the extent that damage to the Premises and/or other portions of the Property materially and adversely interferes with the conduct of Tenant's business, as reasonably determined by Landlord and Tenant. Landlord shall notify Tenant in writing within fifteen (15) days of such damage as to whether the damage is susceptible of complete repair within one hundred twenty (120) days after the occurrence. If such damage to the Property or any portion thereof shall materially and adversely interfere with the conduct of Tenant's business, as reasonably determined by Tenant, and shall not be susceptible of complete repair and restoration within one hundred twenty (120) days after the occurrence of such casualty, then Tenant may, by written notice to Landlord, terminate this Lease as of the date of occurrence of such damage, provided such notice is given within forty-five (45) days after the date of such casualty. If such damage can be repaired within one hundred twenty (120) days and Landlord fails to repair or restore such damage within such period, then Tenant may terminate this Lease, by thirty (30) days' prior written notice to Landlord, in addition to all other remedies Tenant may have under this Lease, at law or in equity. Notwithstanding the foregoing

provisions of this Subparagraph 10(a), in the event that (x) any portion of the Premises is damaged during the last twelve (12) months of the Term or (y) any other portion of the Property is damaged during the last twelve (12) months of the Term and such damage materially and adversely interferes with the conduct of Tenant's business, as reasonably determined by Landlord and Tenant, then Tenant shall have the option to terminate this Lease upon thirty (30) days' prior written notice to Landlord. In the event of the termination of this Lease pursuant to this Paragraph 10, Annual Base Rent and Annual Additional Rent shall be prorated as of the date of such termination.

(b) Landlord and Tenant do each hereby release and discharge the other party and any officer, agent, employee or representative of such party from any liability for loss or damage to property caused by fire or other casualty for which insurance (containing waiver of subrogation) is required to be carried by the injured party under the terms of this Lease.

11. **EMINENT DOMAIN**. If the Property or any portion thereof shall be taken under the power of eminent domain or conveyed in lieu thereof, the taking of which materially and adversely interferes with the conduct of Tenant's business, then Tenant shall have the right to terminate this Lease at such time by furnishing written notice to Landlord. If Tenant does not terminate this Lease, Landlord shall proceed with due diligence to make all repairs necessary to restore the Property to as near its former condition as circumstances will permit and the Lease shall remain in full force and effect, except that, effective on the date of taking or conveyance, the Premises shall be reduced by the portion of the Premises so taken or conveyed, and the Annual Base Rent and Tenant's Proportionate Share shall be (a) proportionately reduced by the portion of the Premises taken or conveyed, and (b) equitably reduced to the extent that such taking or conveyance of other portions of the Property materially and adversely interferes with the conduct of Tenant's business. Damages awarded Landlord for such taking or conveyance shall belong to Landlord, provided that Tenant may assert a claim for the unamortized cost of any leasehold improvements paid for by Tenant, Tenant's personal property, fixtures and moving expenses, and the loss of Tenant's business.

12. **TENANT'S OBLIGATIONS**.

(a) Tenant shall maintain, at its expense, with an insurer(s) holding an A.M. Best Rating of A- (Excellent), Financial Size Category VIII or higher and reasonably acceptable to Landlord:

(i) Standard Commercial General Liability Insurance. The limits of liability of such insurance shall be an amount not less than Two Million and 00/100 Dollars ($2,000,000.00) per occurrence, Personal Injury including death and Two Million and 00/100 Dollars ($2,000,000.00) per occurrence, Property Damage Liability or Two Million and 00/100 Dollars ($2,000,000.00) combined single limit for Personal Injury and Property Damage Liability. Such policies shall name Landlord as Additional Insured and include Contractual Liability coverage;

(ii) Property insurance covering the risk of physical damage or loss to Tenant’s personal property, furniture, trade fixtures, office equipment and any property in the care, custody and control of the Tenant and all original and later-installed Tenant improvements in the Premises, at full replacement cost value. This insurance shall include fire and extended coverage perils. Such property insurance policy shall contain appropriate endorsements waiving the insurer's right of subrogation against Landlord;

(iii) Worker's Compensation and Employer's Liability insurance as required by state law;

(iv) Business Automobile Insurance for all owned, non-owned, hired, rented and/or borrowed vehicles used by the Tenant, its employees or agents. Such policy shall include a combined single limit of at least $1,000,000.00 per claim for bodily injury and property damage and will provide that employees are insured; and

(v) Excess or Umbrella Liability insurance with a limit of at least $1,000,000 providing additional limits of insurance over the primary limits of the Standard Commercial General Liability, Employers' Liability, and Business Auto Liability insurance. Any Tenant insurance policy shall exclude any policies of insurance maintained by Landlord and that Tenant insurance be primary with respect to any indemnity obligation of Tenant in connection with this Lease, and any insurance carried by Landlord shall be excess and non-contributing with respect thereto.

(vi) At Tenant's option, Tenant may provide the coverages required under this Subparagraph 12(a) through blanket policies of insurance covering Tenant's other properties. Tenant shall deliver a certificate of insurance evidencing the coverages (or such other evidence as Landlord may reasonably request) by the Commencement Date, and annually thereafter, within thirty (30) days of the expiration or renewal of the coverages. Each policy will provide that Landlord shall receive at least thirty (30) days' prior written notice of cancellation, material alteration or non-renewal of the policy.

(b) Tenant shall comply with all laws pertaining to Tenant's use of the Premises, including compliance with local and state laws requiring a smoke-free environment, provided Tenant shall not be required to make any structural alterations or improvements to the Premises or the Building.

(c) Tenant shall obey reasonable rules and regulations established by Landlord in connection with the operation, maintenance, safety or security of the Building, provided Tenant has prior written notice of such rules and regulations and they are consistently and uniformly applied to and enforced against all tenants of the Building. The current rules and regulations for the Building are attached to this Lease as Exhibit D. In the event of any conflict between the rules and regulations (as the same may exist from time to time) and the Lease, the terms of this Lease shall control.

(d) During the Term, Tenant may make improvements, alterations or additions to the Premises, provided such work is done in a workmanlike manner with materials and finishes comparable to those then existing in the Premises, and provided that structural improvements, alterations and additions shall be made only with the prior written consent of Landlord, which consent shall not be unreasonably withheld, conditioned or delayed. If Tenant makes any improvements, alterations or additions, Tenant agrees to:

(i) comply with all insurance requirements and all laws, ordinances, rules and regulations of all governmental authorities, provided that Landlord shall cooperate with Tenant in securing any necessary permits, the cost for such permits to be borne by Tenant;

(ii) discharge by payment, bond or otherwise, any mechanics' lien filed against the Property (of which Tenant has written notice) for work, labor, services or materials performed at or furnished to the Premises on behalf of Tenant, except when such mechanics' lien is filed by a contractor, subcontractor, materialman, laborer, employee or agent of Landlord, in which event, Landlord shall discharge such lien by payment, bond or otherwise; and

(iii) upon reasonable request from Landlord, (A) furnish Landlord with plans of such improvements, alterations or additions and (B) furnish Landlord with contractors' affidavits and lien waivers.

(e) Tenant may install and maintain its own security system for the Premises which may be compatible with the Building's security system, which may include establishing limited access areas within the Premises that are reasonably acceptable to Landlord. Landlord will provide Tenant with micro prox tags to be affixed to Tenant's access cards to allow access to the Building security system. At its sole option, Tenant may remove any security, telephone or computer system or any portion thereof (the "Systems") installed on behalf of Tenant, provided Tenant repairs any damage caused by such removal. In no event, however, shall Tenant be required to remove any portion of the Systems (including, without limitation, cabling) installed in any wall, floor, partition, ceiling or under any floor covering.

(f) Upon the expiration or earlier termination of this Lease, Tenant, subject to Subparagraph 12(e) hereof, shall surrender the Premises broom clean, except for loss or damages resulting from casualty, condemnation, acts of God, ordinary wear and tear and any improvements, alterations or additions made to the Premises. In no event shall Tenant be required to remove any such improvements, alterations or additions made to the Premises in connection with the Tenant Improvement Work or any cabling or wiring. Notwithstanding the foregoing, Tenant shall have the right, but not the obligation, to remove any improvements, alterations or additions made to the Premises on Tenant's behalf, provided Tenant repairs any damage caused by such removal.

13. **LANDLORD'S OBLIGATIONS**.

(a) Landlord shall maintain, without cost to Tenant (except as otherwise provided in Paragraph 7 as a Building Operating Expense), with an insurer(s) holding a Best Rating of A- (Excellent), Financial Size Category VIII or higher and reasonably acceptable to Tenant:

(i) Standard Commercial General Liability Insurance. The limits of liability of such insurance shall be an amount not less than Two Million and 00/100 Dollars ($2,000,000.00) per occurrence, Personal Injury including death and Two Million and 00/100 Dollars ($2,000,000.00) per occurrence, Property Damage Liability or Two Million and 00/100 Dollars ($2,000,000.00) combined single limit for Personal Injury and Property Damage Liability. Such policies shall name Tenant as Additional Insured and include Contractual Liability coverage;

(ii) "all risk" property insurance on the Building, the Premises and the Common Areas insuring one hundred percent (100%) of the replacement value thereof. This insurance shall include, but not be limited to, fire and extended coverage perils. The policy will contain appropriate endorsements waiving the insurer's right of subrogation against the Tenant. The property to be insured by Landlord shall not include Tenant's furniture and furnishings or any fixtures or equipment removable by Tenant under the provisions of this Lease;

(iii) Boiler and Machinery (also known as Equipment Breakdown) coverage in an amount that is adequate for the exposure at risk; and

(iv) Landlord shall deliver a certificate of insurance evidencing the coverages described in this Subparagraph 13(a) (or such other evidence as Tenant may reasonably request) by the Commencement Date and at such other time, within thirty (30) days of Tenant's written

request. Each policy will provide that Tenant shall receive at least thirty (30) days' prior written notice of cancellation, material alteration or non-renewal of the policy.

(b) Landlord, without cost to Tenant (except as otherwise provided in Paragraph 7), shall maintain, repair and replace, as necessary, and keep in good order and in safe, clean and first-class condition, all structural and non-structural portions of the Property, and all service systems for the same, including, without limitation:

(i) the plumbing, sprinkler, heating, ventilating and air conditioning systems, building electrical and mechanical lines and equipment associated therewith, and elevators and boilers, all of which either are located in or serve the Premises or Common Areas;

(ii) broken or damaged glass and damage by vandals;

(iii) the exterior and interior structure of the Building including the roof, exterior walls, bearing walls, support beams, foundation, columns, exterior doors and windows and lateral support to the Building and the Common Areas;

(iv) the interior walls, ceilings, floors and floor coverings (including carpets and tiles) of the Common Areas; and

(v) the exterior improvements to the land, including curbs, driveways, parking areas, sidewalks, lighting, exterior signs, ditches, shrubbery, landscaping and fencing.

(c) Without limiting Subparagraph (b) above, Landlord shall provide the following services and facilities, without cost to Tenant except as provided in Paragraph 7 or otherwise stated in this Subparagraph 13(c):

(i) passenger and freight elevator service, toilet facilities and supplies, hot and cold water, sewage facilities, refrigerated drinking water and vermin extermination, in each case as reasonably required by Tenant;

(ii) such repainting as is necessary to maintain the Building in first-class condition;

(iii) heating, ventilation, humidification and air conditioning sufficient to (A) provide for comfortable use and occupancy of the Premises from 7 a.m. to 6 p.m. on Monday through Friday and 7 a.m. to 2 p.m. on Saturday ("Tenant's Regular Business Hours") and (B) accommodate Tenant's electrical capacity and equipment requirements as set forth in Exhibit H-3. "Comfortable use and occupancy" shall mean a temperature range of 70ºF to 74º regardless of exterior air temperatures with internal relative humidity of approximately twenty percent (20%) in winter and approximately fifty percent (50%) in summer. All systems shall conform to local and national codes;

(iv) HVAC Service for the Premises at times other than Tenant's Regular Business Hours, upon receipt of reasonable prior notice from Tenant. Landlord may bill Tenant in arrears by monthly invoice for the actual cost (as evidenced by supporting documentation reasonably acceptable to Tenant) incurred by Landlord for providing HVAC Service after Tenant's Regular Business Hours, provided, however, Landlord acknowledges that its present practice is

not to charge for such services, but Landlord may adopt a charge as it reasonably determines at market rates.

(v) engineering personnel are available on site at the Building on a twenty-four (24) hour, seven (7) day a week basis and Tenant shall have access to such engineers on such twenty-four (24) hour, seven (7) day a week basis to control temperature within the Premises.

(vi) elevator service, access, and Common Area lighting necessary to permit use of the Premises by Tenant after Tenant's Regular Business Hours, twenty-four (24) hours per day, seven (7) days per week;

(vii) replacement of all necessary light bulbs, tubes and ballasts required to maintain a light level throughout the Premises adequate for Tenant's business operation, as reasonably determined by Tenant;

(viii) removal of ice, snow and debris from the Common Areas;

(ix) electricity for Tenant's office uses, including lighting, vending machines, office machines, office equipment and computers;

(x) excluding the Premises, landscaping maintenance and services for all plants, shrubs, flower beds and grounds located in both the interior and exterior of the Building and the Common Areas;

(viiii) facilities for Tenant's loading, unloading, delivery and pick-up activity, including access thereto twenty-four (24) hours per day, seven (7) days per week;

(ixi) janitorial services as provided for in Exhibit E [**to include twice daily day porter services for restrooms and pantries**] attached hereto. At Tenant's expense, Landlord will provide such additional janitorial services as may be requested by Tenant in writing;

(xi) line-striped underground parking facility in the Building (the “Hub Tower Parking Garage” or the “Ramp”) and the use of, from time to time, of up to two hundred (200) paved line-striped surface parking spaces in lots C and D as shown on the attached Exhibit A-3 Throughout the Term, Landlord shall provide up to 22 spaces(calculated as (1) one unreserved parking space in the Ramp for every 4,000 rentable square feet of office space in the Premises) at market rates, which initially shall be one hundred-forty 00/100 Dollars ($140) per space per month. Monthly rates per space for lots C and D shall be seventy 00/100 Dollars ($70) and sixty 00/100 Dollars ($60), respectively. All present rates are subject to annual review and adjustment, provided that such adjustments are at market rates. All parking facilities shall be safe, clean and adequately lit;

(xiv) security for the Property at all times. Landlord will physically check and secure the Building and the Premises after Tenant's business hours;

(xi) a security/reception desk in the Building, which will be staffed and open from 7 a.m. until 6 p.m. Monday through Friday, and 7 a.m. until 2 p.m. on Saturdays. A representative of Landlord will be available at 700 Walnut and on call at all other times, twenty-four (24) hours per day, seven (7) days per week;

(xiii) At Landlord's sole cost, Building standard suite signage, a building directory in the lobby of the main entrance level of the Building and floor directories in the elevator lobbies of each floor on which the Premises are located. Such directories shall include listings of Tenant's name and the names of Tenant's principal departments, sections, employees and agents, as provided by Tenant to Landlord, from time to time, in writing. Further, Tenant shall have the right at Tenant's sole expense to install signage at street level and skywalk Building entrances, the locations, size and design to be mutually agreeable to Landlord and Tenant. Tenant at Tenant's expense, shall be responsible for (i) obtaining all permits and approvals required to insure that the sign(s) conform to all applicable laws, zoning and code requirements of the city or town where the Property is located and (ii) the installation, maintenance and removal of the signs(s).

(d) Notwithstanding anything to the contrary in the Lease, if any interruption of Essential Services, as hereinafter defined, materially and adversely interferes with Tenant's business operations in all or any portion of the Premises, then unless such interruption shall be the result of the negligence or intentional act of Tenant or its agents, Tenant shall provide written notice of the same to Landlord with specific references to the Essential Services which have been interrupted. If Landlord fails to restore the Essential Service identified in Tenant's written notice within three (3) business days of such notice, then the Annual Base Rent payable hereunder shall be proportionately abated and recouped against up to 50% of the monthly Annual Base Rent due and payable until such abatement has been recouped in full. The abatement shall be calculated from the date of such written notice until the date when such Essential Services are restored. "Essential Services" shall mean (i) HVAC services, repair & maintenance, (ii) electrical service, repair & maintenance, (iii) water/sewer, (iv) debris removal, if necessary for reasonable access, (v) parking accommodations (including garage) and repair, (vi) reasonable pest control, (vii) janitorial service, and (viii) legal compliance to the extent Tenant is forbidden from operating its business in any portion of the Premises. Landlord shall have no responsibility or liability for failure to supply the Essential Services when prevented from so doing by any cause beyond Landlord's reasonable control.

14. **COMPLIANCE WITH LAWS; LIFE SAFETY**.

(a) In addition to the obligation to comply with laws set forth in Subparagraph 19(a), Landlord shall, at its own expense, comply with all present and future laws, ordinances, requirements, orders, directives, rules and regulations of federal, state, county and city governments and of all other governmental authorities having or claiming jurisdiction over the Property (excluding Tenant's specific use of the Premises) or appurtenances or any part thereof. Without limiting the generality of the foregoing, Landlord shall, at its own expense, (i) comply with the Americans with Disabilities Act of 1990 (as amended) ("ADA"), the Federal Occupational Safety and Health Act of 1970 (as amended) and all regulations or standards as are or may be promulgated thereunder; and (ii) procure each and every permit, license, certificate, or other authorization now or hereafter required in connection with the lawful and proper use of the Property

(b) Landlord, without cost to Tenant except as otherwise provided in Paragraph 7, shall install and maintain within the Property sprinkler systems, fire alarms, emergency lighting, and other related life safety equipment to comply with the current edition of the National Fire Code Bulletin entitled "NFPA 101 - Code for Safety to Life," along with all present and future requirements of federal, state, county and city governments and all other governmental authorities having or claiming jurisdiction with respect to the occupancy of the Premises initially and throughout the Term. Exits from the Premises,

Building and other portions of the Property shall comply with the current NFPA 101 standards at the time of construction.

15. **INDEMNIFICATION**.

(a) Tenant shall defend and indemnify Landlord and save Landlord harmless from and against any and all losses, claims, liability, expenses and damages (other than consequential damages) which, either directly or indirectly, in whole or in part, arise out of or result from (i) the negligence or willful misconduct of Tenant, its agents, contractors or employees; (ii) any act or occurrence in the Premises, unless caused by the negligence or willful misconduct of Landlord, its agents, contractors or employees; (iii) judgments, citations, fines or other penalties rendered or assessed against Landlord (with the exception of any claims under any worker's compensation laws) as a result of Tenant's failure to comply with all federal, state and local laws, safety and health regulations relating to Tenant's specific use of the Premises, provided that Landlord agrees to give Tenant prompt notice of any such violation asserted by any government agency; and (iv) the breach of any provision of this Lease by Tenant, its agents, contractors or employees.

(b) Landlord shall defend and indemnify Tenant and save Tenant harmless from and against any and all losses, claims, liability, expenses and damages (other than consequential damages) which, either directly or indirectly, in whole or in part, arise out of or result from (i) the negligence or willful misconduct of Landlord, its agents, contractors or employees; (ii) judgments, citations, fines or other penalties rendered or assessed against Tenant (with the exception of any claims under any worker's compensation laws) as a result of Landlord's failure to comply with all provided that Tenant agrees to give Landlord prompt notice of any such violation asserted by any government agency; and (iv) the breach of any provision of this Lease by Landlord, its agents, contractors or employees.

(c) Nothing in this Paragraph 15 is intended to require indemnification for any property claim for which insurance is required to be maintained under the terms of this Lease. The rights and obligations of Landlord and Tenant under this Paragraph 15 shall survive the expiration or earlier termination of this Lease.

16. **TENANT DEFAULT**. If Tenant shall:

(a) file or have filed against it a petition or case under any section or chapter of the United States Bankruptcy Code, as amended, or under any similar law or statute of the United States or any state and such petition or case is not discharged within sixty (60) days;

(b) fail to pay any installment of Annual Base Rent or Annual Additional Rent within ten (10) days after receiving written notice that the same is overdue; or

(c) fail to fulfill any other covenant or provision of this Lease on its part to be performed and fail to remedy such failure within thirty (30) days after Landlord shall have given Tenant written notice of such failure, then the same shall be an event of default and Landlord shall have all rights, powers and remedies available at law or equity, including the right to terminate Tenant’s right to possession without terminating Tenant’s liability under the Lease. Landlord shall use all commercially reasonable efforts to mitigate its damages in the event of default by Tenant. The rights of Landlord under this Paragraph 16 shall survive the expiration or earlier termination of this Lease.

17. **LANDLORD DEFAULT**.

(a) If Landlord shall:

(i) file or have filed against it a petition or case under any section or chapter of the United States Bankruptcy Code, as amended, or under any similar law or statute of the United States or any state and such petition or case is not discharged within sixty (60) days; or

(xiii) fail to fulfill any covenant or provision of this Lease on its part to be performed and fail to remedy such failure within thirty (30) days after Tenant shall have given Landlord written notice of such failure,

then the same shall be an event of default and Tenant shall have all rights, powers and remedies available at law or equity.

(b) Without limiting the rights described in Subparagraph 17(a) above, in the event that (i) Landlord, for any reason, other than by reason of any default by Tenant, fails to fulfill any covenant or provision of this Lease on its part to be performed, and (ii) such failure materially and adversely interferes with the conduct of Tenant's business, as reasonably determined by Tenant and Tenant actually ceases to conduct its business in all or a portion of the Premises; and (iii) such failure is not remedied within ten (10) days after Landlord receives actual notice of such failure, then (x) Annual Base Rent and Annual Additional Rent shall be proportionately abated as of the tenth (10th) day after such notice until such failure is remedied, and (y) Tenant shall have the right, but not the obligation, to remedy Landlord's failure and charge Landlord for the reasonable cost of such remedy, which charges shall be payable by Landlord within ten (10) days of Tenant's demand therefor. If Landlord shall fail to pay the same, Tenant shall have the Set-Off Rights, as defined in Subparagraph 7(d). The rights described in (y) shall be deemed Tenant's "Additional Remedies."

(c) Without limiting the rights described in Subparagraphs 17(a) and (b) above, in the event that (i) Landlord, for any reason, other than by reason of any default by Tenant, fails to fulfill any covenant or provision of this Lease on its part to be performed, and (ii) such failure is not remedied within thirty (30) days after Tenant shall have given Landlord written notice of such failure, then Tenant may exercise the Additional Remedies. The rights of Tenant under this Paragraph 17 shall survive the expiration or earlier termination of this Lease.

(d) Without limiting the rights described in Subparagraphs 17(a), (b) and (c) above, in the event that (i) Landlord fails to fulfill any covenant or provision of this Lease, and (ii) such failure materially and adversely interferes with the conduct of Tenant's business, as reasonably determined by Tenant, and (iii) such failure is not remedied within sixty (60) days after Tenant shall have given Landlord written notice of such failure, unless Landlord has commenced and is diligently prosecuting its cure, provided that such additional period shall not exceed ninety (90) days, then Tenant shall have the right to terminate this Lease.

18. **SUBORDINATION, NON-DISTURBANCE AND ATTORNMENT AGREEMENTS**.

(a) Future Encumbrances. This Lease shall be subject and subordinate to the lien of any mortgage, deed of trust or ground lease hereafter placed on all or any part of the Property, provided that Landlord shall deliver to Tenant a Subordination, Non-Disturbance and Attornment Agreement substantially in the form attached hereto as Exhibit G (the "SNDA") or as otherwise mutually agreed upon by the Tenant and the holder of such mortgage ("Holder"). Upon execution by Tenant, Landlord shall record the SNDA in the appropriate governmental offices for giving notice of interests in real property for the city or county, as the case may be, where the Property is located ("Recording Office"), at Landlord's sole cost.

(b) Existing Encumbrances. Simultaneously with the execution and delivery of this Lease, Landlord shall deliver to Tenant the SNDA executed by each Holder of any mortgage, deed of trust or ground lease then encumbering all or any part of the Property. Tenant shall execute the SNDA simultaneously with the execution of this Lease. Landlord shall, within ten (10) days of the execution of this Lease, record the SNDA(s) in the appropriate Recording Office at Landlord's sole cost.

(c) Tenant shall be entitled to rely upon any notice requesting that Tenant make all future rent payments to a Holder and Tenant shall not be liable to Landlord for any payment made to a Holder in accordance with such notice.

19. **ENVIRONMENTAL COMPLIANCE**.

(a) Landlord represents that the Property and its existing uses and to the best of Landlord's knowledge, after due investigation, its prior uses, comply with, and Landlord is not in violation of, and has not violated, in connection with the ownership, use, maintenance or operation of the Property and the conduct of the business related thereto, any applicable federal, state, county, regional or local statutes, laws, regulations, rules, ordinances, codes, standards, orders, licenses and permits of any governmental authorities relating to environmental, health or safety matters (including, without limitation, Hazardous Materials, as defined in Subparagraph 19(b) below) (collectively, "Environmental Laws"). Landlord shall, at its own expense, promptly observe and comply with all present and future Environmental Laws, including, without limitation, the Clean Air Act Amendments of 1990 and any regulations (as amended) and all regulations or standards as are or may be promulgated thereunder.

(b) Without limiting the generality of Subparagraph 19(a), Landlord represents that Landlord, its agents, contractors and employees (i) have operated the Property and have at all times received, handled, used, stored, treated, transported and disposed of any chemical, material or substance, exposure to which is prohibited, limited or regulated by any federal, state, county, regional or local authority or which even if not so prohibited, limited or regulated, poses a hazard to the health and safety of the occupants of the Property or the occupants of the area near the Property (collectively, "Hazardous Materials") in strict compliance with all Environmental Laws, and (ii) have removed (or will remove prior to the Commencement Date) from the Property all Hazardous Materials.

(c) Landlord represents to Tenant that the information provided by Landlord in (i) the Environmental Issues Questionnaire, and (ii) the NFPA 101 Life Safety Information List (both dated April 21, 2016) was true and accurate on that date and remains true and accurate.

(d) Landlord represents that there is no fact known to Landlord pertaining to the physical condition of the Property or the area surrounding the Property which (i) materially and adversely

affects or materially and adversely will affect the Property, or the use, enjoyment or value thereof, or Landlord's ability to perform the obligations contained in this Lease, and (ii) which Landlord has not disclosed to Tenant in writing prior to the date of this Lease.

(e) Landlord represents that it has received no notices of any violation or claimed violation of any of the matters referred to in Subparagraphs 19(a) through 19(c) or of any pending or contemplated investigation, lawsuit or other action relating thereto.

(f) Tenant covenants and agrees that it shall use the Premises in full compliance with the Environmental Laws, and shall indemnify Landlord, for any damages incurred by Landlord or to the Property by reason of any breach of this covenant by Tenant.

(g) The representations contained in this Paragraph 19 shall survive the expiration or earlier termination of this Lease.

20. **PREPARATION OF PREMISES**.

(a) Preparation Work. Subject to the Construction Schedule (as hereinafter defined), Landlord will perform all work necessary for preparation of the Premises (including the "Base Building Work," as hereinafter defined) in accordance with (i) the final preparation plans including construction documents (the “Final Preparation Plans”) generated by Tenant to be submitted by Tenant to Landlord by May 1, 2017, which date remains subject to the five (5) day grace period referenced in Section 5(c) and primarily based on the test fit to be attached hereto as Exhibit H-1 ("Test Fit"); (ii) any change orders thereto; (iii) the "General Contract;" and (iv) the construction schedule attached hereto as Exhibit H-2 ("Construction Schedule"), all as more particularly described hereinbelow (the "Preparation Work"). Landlord shall, within five (5) days of receipt of the Final Preparation Plans, notify Tenant in writing of its approval, which shall not be unreasonably withheld, conditioned or delayed, or a detailed reason for its disapproval. If Landlord fails to deliver said notice within five (5) days, then the "Final Preparation Plans" shall be deemed approved. Landlord shall be solely responsible, at Landlord's sole cost, for performing the base building work in the Premises and the restroom and elevator lobby upgrades (the "Base Building Work") set forth in Exhibit H-3, which Base Building Work shall be with materials of the standard type, brand, and quality used generally by Landlord for leasehold construction or common areas, as the case may be throughout the Building, but in no event shall be less than the type, brand, and quality substantially equivalent to that found in new leasehold construction or common areas, as the case may be, in other first-class office projects in the city in which the Building is located. Tenant's employees, agents and contractors shall be permitted entry to any portion of the Building and Premises prior to the Commencement Date for the installation of Tenant's equipment and furnishings and the performance of such work as Tenant may desire, provided that such installations shall not unreasonably interfere with construction of the improvements by Landlord. In preparing the Premises, Landlord shall provide Tenant, its agents, employees and contractors, with all Building services necessary or desirable for the installations and work described in the preceding sentence. Landlord's and Tenant's performance of the obligations set forth in this Subparagraph 20(a) shall be pursuant to all terms of this Lease, excepting Tenant's obligation to pay Annual Base Rent, Annual Additional Rent, and any utility charges.

(b) Change Orders. Tenant may make additional changes to the Final Preparation Plans and the "General Contract", as hereinafter defined, subject to Landlord's written approval which shall not be unreasonably withheld, conditioned or delayed. Landlord shall notify Tenant in writing, within three (3) days of Tenant's change order request, of its approval or a detailed reason of its disapproval of such change order and a good faith estimate of the actual cost of such change order.

Tenant may, within three (3) days of its receipt of such estimate, elect to rescind its request for such change order upon written notice to Landlord. The cost to Tenant of any approved change order shall be limited to the actual costs incurred as a result of such change order, net of any overhead, profits, or fees. Landlord may require changes in the Final Preparation Plans and the General Contract only if necessary to comply with changes, revisions or additions to applicable building codes and other laws, which changes shall be at Landlord's sole cost and shall be subject to Tenant's prior written approval.

(c) General Contract. The Preparation Work shall be performed by Neumann Brothers, (the “General Contractor”) on a cost of work basis plus a fee with a guaranteed maximum price. Landlord shall enter into a contract using an AIA 133 with A201 General Conditions with the General Contractor for performance of the Preparation Work, which contract shall (i) contain a contract price in an amount equal to the lesser of (x) the actual cost of the Preparation Work and (y) a guaranteed maximum price (regardless of the actual cost) approved by Tenant (the "Contract Price"); (ii) include a complete unit cost breakdown of all materials and labor, which unit costs also shall apply to all change orders; (iii) itemize the Base Building Work and Tenant Work (defined below); (iv) require insurance coverage in amounts and types mutually and reasonably acceptable to Landlord and Tenant; (v) provide that the General Contractor is required to bid to three qualified firms for each trade for Preparation Work, Landlord will review its list of qualified contractors for each trade with Tenant and both parties will reasonably cooperate with each other in the selection of qualified firms for bidding; Tenant shall have the right to approve any subcontractor, excluding subcontractors performing Base Building Work, entering into a contract with a contract price in excess of Twenty-Five Thousand and 00/100 Dollars ($25,000); (vi) include a requirement that the Preparation Work shall be completed in accordance with the Construction Schedule; and (vii) otherwise be in a form mutually and reasonably acceptable to Landlord and Tenant (the "General Contract"). The General Contractor's fee shall be comprised of an overhead and profit fee of 6.5% (comprised of preconstruction time, project management time, safety professionals, office personnel and accounting), other indirect costs include: small tool charge of 3.5% of the costs of labor and benefit, umbrella liability insurance fee of 0.2% of project costs, a gl subcontractor insurance fee of 0.07% of subcontract cost; and payment and performance bond rate fees as follows: the first $1,000,000.00 shall have a fee of 0.72%, the next $4,000,000.00 shall have fee of 0.65%, the next $5,000,000.00 shall have a fee of 0.55%, and any amount above the amounts set forth herein shall have fee of 0.475%. Tenant shall have the right to retain its own construction manager. Landlord shall be solely responsible for all payments and other liabilities or obligations to the General Contractor, Landlord's other contractors, agents or employees who participate in the Preparation Work. Nothing in the Final Preparation Plans creates any authority for Landlord, its agents, employees or contractors to act on behalf of Tenant or cause Tenant to incur any obligation or liability. In no event shall the cost of the Preparation Work include, nor shall Tenant be otherwise liable for, any supervisory, freight elevator, loading dock access or other similar fees.

(d) Tenant's Costs and Tenant Improvement Allowance.

(xiv) Tenant's Costs. Tenant's costs for the Preparation Work shall be limited solely to the Contract Price actually paid by Landlord, as the same may have been revised by any change orders made in accordance with this Lease, which Tenant's costs shall be reduced by, without limitation, the following: (x) any overhead charge, profit, fee or other mark-up of any kind for the benefit of Landlord or any affiliate; (y) any and all costs, expenses or fees directly and indirectly related to the Base Building Work; and (z) any and all costs, expenses or fees relating to Landlord's obligations under Subparagraph 20(d) ("Tenant's Costs"). Prior to the earlier to occur of the commencement of construction of the Preparation Work and execution of

the General Contract, Landlord shall furnish to Tenant a good faith, detailed written estimate of the cost of each item of Tenant's Costs;

Tenant shall be permitted to enter the Premises to install its equipment and furniture prior to Substantial Completion, provided Tenant does not unreasonably interfere with Landlord in the performance of its work and Tenant's move-in.

(ii) Tenant Improvement Allowance. Landlord shall provide Tenant an allowance of thirty-seven and 50/100 Dollars ($37.50) per rentable square foot in the Premises (the "Tenant Improvement Allowance") to be applied against Tenant's Costs as follows: $36.50/RSF for tenant improvements and $1.00/RSF for Tenant's moving costs. Within thirty (30) days of Substantial Completion of the Premises, Landlord shall furnish to Tenant a final accounting of all Tenant's Costs (itemized by construction category for labor, materials and taxes) which accounting shall include, without limitation, draw requests signed by the General Contractor and actual bills and invoices evidencing such costs;

(x) If Tenant's Costs, as verified in writing by Tenant, exceed the Tenant Improvement Allowance, then Tenant shall, at its option, either (A) amortize any portion of the excess up to ten Dollars ($10) per rentable square foot over the Term of the Lease with interest computed as of at the Rent Commencement Date at the annual rate of four percent (4%), or (B) pay Landlord the excess within thirty (30) days of receipt of actual bills and invoices evidencing such costs and completion of such work in accordance with the Final Preparation Plans as evidenced by certification of Tenant's Architect.

(y). If Tenant's Costs, as verified in writing by Tenant, are less than the Tenant Improvement Allowance, then following Tenant's verification of Tenant's Costs, Landlord shall, at Tenant's option, either (A) pay Tenant the difference within thirty (30) days or (B) allow Tenant to apply the remainder of the Tenant Improvement Allowance to Tenant's Annual Base Rent in the form of a rent credit beginning with the next monthly installment of Annual Base Rent due Landlord.

(e) Warranty. Landlord warrants to Tenant, for one year after the Commencement Date of the Lease, that the Preparation Work shall be completed by Landlord in a good and workman-like manner, free from faulty materials, in accordance with all applicable legal requirements, and sound engineering standards, and in accordance with the Preparation Plans. Such warranty includes, without limitation, the repair or replacement (including labor), at Landlord's sole cost, of all materials, fixtures and equipment which are defective or which are defectively installed by Landlord in connection with the Preparation Work. Landlord shall, at Tenant's option, assign to Tenant, or enforce for the benefit of Tenant, all warranties from subcontractors and material suppliers for such materials, workmanship, fixtures and equipment in effect after the expiration of such twelve (12) month warranty period. The provisions of this Subparagraph (e) shall survive the termination or expiration of this Lease.

(f) Landlord's Obligation. Landlord, at its sole cost and expense, will assist Tenant in the development of the Final Preparation Plans. Such assistance shall include, without limitation, (i) coordination with the plans and specifications, for the Base Building Work, (ii) construction cost estimates for potential savings, and (iii) contract negotiations, if required.

(g) Authorized Representatives. Tenant shall furnish Landlord with a written list of Tenant's authorized construction representatives for the Preparation Work. Only such construction

representatives are authorized to sign any change order, or disbursement request for any allowance, receipt, or other document on behalf of Tenant related to the Preparation Work, and without the signature of such authorized construction representative, no such document shall be binding upon Tenant. Tenant may from time to time change or add to the list of authorized construction representatives by giving Landlord written notice of the addition or change.

(h) Tenant Option to Perform Preparation Work (other than Base Building Work).

After the selection of the General Contractor, Tenant may elect to execute a contract with the General Contractor for the performance of the Preparation Work but specifically excluding the Base Building Work ("Tenant Work"). In such event, Landlord shall pay to Tenant, or if directed by Tenant, directly to the General Contractor, amounts coming due pursuant to the construction contract. If Landlord fails to timely make such payments, Tenant shall have the Set Off Rights.

(i) Timing of Work and Freight Elevator Use. Tenant shall be permitted without additional charge by Landlord, to perform such work during business and non-business hours and, further, to use the freight elevator(s) on a 24/7 basis in connection with its construction and move-in including, without limitation, for furniture installation, its construction vendors and employee relocations.

21. **ANTENNA(E) INSTALLATION**.

Subject to the following provisions of this Paragraph 21, Landlord grants Tenant the right, in common with Landlord and other tenants, to install, operate and maintain, at Tenant's expense and risk, a lawfully permitted antenna(e), satellite dish and associated equipment (the "Antenna Equipment") at a location on the Property to be determined by Tenant and reasonably acceptable to Landlord (the "Antenna Premises"):

(a) Tenant shall submit to Landlord for its approval, a full set of engineering plans and specifications for the proposed Antenna Equipment installation, such approval not to be unreasonably withheld, conditioned or delayed. Landlord may withhold its approval for reasons including, but not limited to, the size and number of antennae proposed;

(b) Tenant shall make all required conduit or cable connections between Tenant's equipment in the Premises and the Antenna Equipment utilizing Building services, subject to (i) Tenant's payment of reasonable costs for such services, and (ii) approval of such connections by Landlord, which approval shall not be unreasonably withheld, conditioned or delayed;

(c) Any Antenna Equipment installed by Tenant shall be erected so as not to interfere with the operation of any previously erected antenna(e), and Landlord shall not erect or permit the erection of any antenna(e) so as to interfere with the operation of any Antenna Equipment previously erected by Tenant;

(d) Tenant, its employees, agents and contractors shall, at all reasonable times, have the right to enter or leave the Antenna Premises at all times accompanied by Landlord's representative. Landlord agrees that it will not give unauthorized persons access to Tenant's Antenna Premises or Antenna Equipment;

(e) Tenant shall obtain all necessary municipal, state and federal permits and authorizations required to install, maintain and operate the Antenna(e) Equipment and pay any charges levied by government agencies which are the sole result of Tenant having the Antenna Equipment.

Landlord agrees to fully cooperate with Tenant in obtaining all such permits and authorizations, at no cost or expense to Landlord;

(f) Tenant agrees to maintain the Antenna Equipment and Antenna Premises in a good state of repair and to save Landlord harmless from any claims, liability or expenses resulting from the erection, operation, maintenance, existence or removal of the Antenna Equipment, provided that such loss, costs or damages are not due, in whole or in part, to the negligence or willful misconduct of Landlord, its agents, employees or contractors;

(g) At the conclusion of the Term, Tenant shall remove the Antenna Equipment and surrender and restore the Antenna Premises to Landlord in substantially as good condition as when entered, except for loss or damages resulting from casualty, condemnation, act of God or ordinary wear and tear; and

(h) The liability insurance to be carried by Tenant pursuant to the provisions of this Lease shall include coverage for Tenant's activity on the Antenna Premises. Tenant shall pay any increase in rates for insurance which Landlord is required to carry under the Lease resulting from the installation and use of the Antenna Equipment by Tenant, provided Landlord delivers to Tenant evidence, reasonably satisfactory to Tenant, of such increase and the reasons therefor.

22. **RECORDING**. Neither Landlord nor Tenant shall record this Lease. Contemporaneously with the execution of this Lease, Landlord and Tenant shall execute a memorandum of lease containing such information as shall be required by the appropriate state statutes, and such other information as Tenant may reasonably require. Either party may, within ten (10) days after the execution of this Lease, at its sole cost, record the memorandum of lease in the appropriate Recording Office. Landlord shall not, without Tenant's prior written consent, disclose the contents of this Lease to any third party except Landlord's professional advisors, existing and potential lenders or ground lessors, and potential purchasers of the Property.

23. **ESTOPPEL CERTIFICATE**. Tenant shall, upon fourteen (14) days prior written request of Landlord (but not more often than twice during any calendar year) execute, acknowledge and deliver to Landlord or its designee a written statement stating, to the reasonable knowledge of Tenant as of the date made: (a) the date this Lease was executed; (b) the Commencement Date and the Expiration Date; (c) the monthly amount of Annual Base Rent and the date to which such Annual Base Rent has been paid; (d) that this Lease is in full force and effect and has not been assigned, modified, supplemented or amended in any way (or specifying the date and terms of any agreement so affecting this Lease); (e) that this Lease represents the entire agreement between the parties as to this lease transaction (or identifying those other documents which, together with this Lease, form the entire agreement between the parties as to this lease transaction); (f) that all required contributions by Landlord to Tenant on account of Tenant's improvements have been received (or specifying those required contributions which Landlord has not made); (g) that as of the date of the statement there are no existing defenses or offsets which Tenant has against the enforcement of this Lease by Landlord except as set out by Tenant; (h) that no Annual Base Rent has been paid for more than one (1) month in advance except as set out by Tenant; and (i) that no security has been deposited with Landlord. Any such statement may be relied upon by a prospective purchaser or mortgagee of Landlord's interest in the Property.

Landlord shall, upon demand, reimburse Tenant for any out-of-pocket fees incurred by Tenant in connection with the review, execution, and delivery of such estoppel up to Two Hundred Fifty and 00/100 Dollars ($250.00) per request. Landlord shall, upon fourteen (14) days prior written request by Tenant,

deliver to Tenant or its designee an estoppel certificate, in the substance and form described above, describing the status of this Lease and any ground lease, underlying lease or mortgage encumbering the Property. Tenant shall, upon demand, reimburse Landlord for any out-of-pocket fees incurred by Landlord in connection with the review, execution, and delivery of such estoppel up to Two Hundred Fifty and 00/100 Dollars ($250.00) per request.

24. **EXTENSION RIGHT; HOLDING OVER**.

(a) Tenant shall have the right to extend the Term of this Lease, as extended by the option to renew described in Paragraph 28 (the "Option to Renew”), for a period of six (6) months (the "Extension Period"), subject to the following terms and conditions (the "Extension Right"). The Extension Right shall be exercised by Tenant delivering written notice to Landlord at least six (6) months days prior to the Expiration Date, as extended by the Option to Renew. The Extension Period shall be subject to all of the terms and conditions of the Lease and each monthly installment of Annual Base Rent shall be the monthly installment of Annual Base Rent in effect during the last month prior to the Extension Period.

(b) If Tenant shall hold over after the expiration of the Term, its tenancy shall be on a month-to-month basis and shall be subject to all of the terms, conditions, provisions and obligations of this Lease, except that, following the expiration of the Term, each monthly installment of Annual Base Rent shall be one hundred twenty five percent (125%) of the monthly Annual Base Rent installment that applied to the last month of the Term. For the first two (2) months of any holdover, this holdover rental amount shall be Landlord's exclusive right and remedy against Tenant and shall be deemed to cover all liabilities, obligations or charges which may be incurred by Landlord because of a holdover by Tenant.

25. **OTHER UTILITIES**. At Tenant's sole cost and expense, Tenant shall have the right to introduce into the Premises such other utilities as Tenant might require and Tenant shall pay the cost of such other utilities directly to the applicable utility companies.

26. **OPTION TO PROVIDE OWN JANITORIAL SERVICES**. Tenant shall have the right at any time during the Term to contract independently with any cleaning contractor of Tenant's choice for the cleaning of all of the Premises. Tenant shall give Landlord at least thirty (30) days prior written notice of Tenant's election. In the event that Tenant elects to contract independently, then beginning with the effective date of the institution of such services by Tenant, (i) the Annual Base Rent and the Base Year Building Operating Expenses shall be reduced as specified in Subparagraph 6(b), and (ii) Building Operating Expenses shall include the cost of janitorial services only for the Common Areas.

27. **ELECTRICITY**. Upon notice to Landlord at any time during the Term, Tenant may elect to have Tenant's electricity consumption in the Premises separately metered at its expense. In the event that Tenant elects to separately meter its electricity consumption: (a) Tenant shall pay the cost of such metering and the cost of Tenant's electricity consumption directly to the electric utility company; (b) the Annual Base Rent and the Base Year Building Operating Expenses shall be reduced as specified in Subparagraph 6(b); and (c) Building Operating Expenses shall include only the cost of electricity consumption for the Common Areas. In the event that separate metering is not available or is available only at a cost which in Tenant's sole opinion is prohibitive, Tenant, at its option, may have a survey of its electricity consumption performed by a firm of engineering consultants acceptable to Tenant and selected from a list of not less than five (5) local professional electrical engineering firms mutually agreeable to Landlord and Tenant, and Tenant shall reimburse Landlord monthly for the cost of its electricity consumption as determined by the survey, and the adjustments described in Subparagraphs (b) and (c) shall be made.

If Tenant elects to surrender space as provided in Section 30 below, Tenant shall pay to re-connect metering for space returned to Landlord.

28. **OPTION TO RENEW**.

(a) Provided Tenant is not in default under this Lease beyond any applicable cure period at the time the option may be exercised, Landlord grants Tenant the option to renew this Lease with respect to all or any portion of the Premises comprising at least two floors for one (1) additional term of five (5) years. Such option shall be exercised by Tenant delivering written notice to Landlord at least nine (9) months prior to the Expiration Date, as extended by any previously exercised option.

(b) The renewal rental rate for the first year of the option period shall be nineteen 00/100 Dollars ($19.00) per rentable square foot with annual increases of twenty-five cents ($0.25) per rentable square foot with a 2018 Base Year (the “Renewal Rental Rate”). Landlord shall provide Tenant with an improvement allowance equal to Ten 00/100 Dollars ($10.00) for every rentable square foot of Premises so renewed, which amount shall be payable by Landlord within thirty (30) days of Tenant’s exercise of the renewal right, and following presentation of receipts for improvements and/or furniture, fixtures and equipment, or at Tenant’s sole election regardless of its use of the allowance for improvements, as a rent credit any time on or after the first day of the renewal term, provided that at least seventy-five percent (75%) of the improvement allowance was used for improvements and/or furniture, fixtures and equipment. If Landlord fails to timely tender all or any portion of such amount, Tenant shall have the Set-Off Rights.

(c) Except as set forth above, the option period shall be subject to all of the terms and conditions of this Lease.

29. **AMENITIES**.

(a) Landlord agrees that Tenant and its employees, guests, invitees and contractors shall have the right throughout the Term to use at the unsubsidized rate the cafeteria located on the third floor of the building located at 700 Walnut Street, also owned by Landlord. Landlord consents to maintain and operate such cafeteria subject to reasonable modifications in rules and regulations provided that the cafeteria operations are consistent with first-class corporate cafeterias.

(b) Tenant shall have the right to use the existing conference facilities located on the third floor of the Building throughout the Term at Landlord’s reasonable charges and terms. The current rates and terms for such usage are attached as Exhibit F.

(c) Upon not less than thirty (30) days notice, Tenant shall have the right to use the conference facilities at 700 Walnut Street for approximately 200 participants up to four (4) times per year at reasonable charges and terms. The parties shall reasonably cooperate with each other with respect to such use and the terms of such use. Landlord reserves the right to re-locate Tenant at its expense upon reasonable advance notice to reasonably equivalent facilities if Landlord needs the conference facilities for its own purposes.

(d) Tenant shall have the right to use the fire-stairs between floors of the Premises and, subject to Landlord’s approval, not to be unreasonably withheld or delayed, install paint and amenities allowed by fire code, and a security system in the stairwells.

(e) Tenant shall have the right, at its election, and at its expense, subject to the Tenant Improvement Allowance, pursuant to plans and specifications reasonably approved by Landlord, to install a supplemental HVAC unit in the Premises to cool its voice and data room on a 24/7 basis, which shall be served by the Emergency Generator (as defined in paragraph 35 below). Tenant may use the Building's glycol loop for such equipment at no charge

30. **OPTION TO SURRENDER SPACE**. During the period beginning on the fifth (5th) anniversary of the Rent Commencement Date, Tenant shall have the option, upon not less than nine (9) months prior written notice, to surrender all or up to fifty percent (50%) of the Premises comprising one or more whole floors or a portion of the 13th Floor premises (the "Surrender Space"). The date stated in Tenant's notice as the effective date of delivery of the Surrender Space to Landlord shall be referred to as the "Surrender Date," On or before thirty (30) days prior to the Surrender Date, Tenant shall tender to Landlord the amount of (i) the monthly gross rent for the Surrender Space as of the date of the surrender notice and (ii) the unamortized (on a straight-line basis with no interest as of the Surrender Date) sum of the Tenant Improvement Allowance, and additional allowance, free rent and brokerage commissions actually paid by Landlord applicable to the surrender space. As of the Surrender Date, (a) Tenant shall vacate the Surrender Space; (b) Annual Base Rent and Tenant's Proportionate Share shall be reduced by the same proportion that the rentable area of the Surrender Space bears to the total rentable area of the Premises, if applicable; (c) Tenant shall be relieved of any further obligations under this Lease pertaining to the Surrender Space; and (d) Tenant's right to parking spaces stated in Subparagraph 13(c)(xii) shall be proportionately reduced, if applicable. This option to surrender a portion of the Premises shall be self-operative and no additional agreement between Landlord and Tenant will be necessary to effectuate such release; provided, however, Landlord and Tenant shall, for their mutual convenience, execute an amendment to this Lease within thirty (30) days following the Surrender Date, stating the reduced area of the Premises, the Annual Base Rent, the monthly rent installment and Tenant's Proportionate Share. Immediately after the Surrender Date, Landlord shall, at its expense, perform any construction work necessary on the 13th Floor to separate the Surrender Space from the balance of the Premises, including, without limitation, the construction of any necessary new demising walls, and the finishing of the side of such walls that face the balance of the Premises, in a manner that is consistent with the interior of the Premises.

31. **CONTINUING RIGHT OF FIRST REFUSAL**.

(a) First Refusal If at any time during the term of this Lease (and subject to the rights of all tenants to renew their then current leases, the existing rights of Dickinson Law Firm with respect to the 15th floor and Deloitte, LLP and Whitfield and Eddy, PLC with respect to the 18th floor), and subject to the use by Landlord for its own use, as opposed to prospective third party tenants, Landlord receives a bona fide offer from a third party to lease all or any part of the rentable areas of the Building, Landlord shall provide Tenant with written notice of the terms of Landlord's offer (the "Landlord's Offer"). Within ten (10) business days following its receipt of Landlord's Offer, Tenant shall have the right to accept the same by written notice to Landlord. Within 30 days following Tenant's written notice of acceptance, Landlord and Tenant shall enter into an amendment of this Lease incorporating the space described in Landlord's Offer into the Premises upon the same economic terms then applicable to the Premises, including, without limitation Term, provided, however that the Tenant Improvement Allowance and free rent applicable to the Premises shall be applied to the additional space on a per rentable square foot basis, prorated to reflect the then remaining Term of Landlord's Offer. In the event Tenant either rejects Landlord's Offer or fails to notify Landlord of its acceptance of the same within the thirty (30) day

period, Landlord shall thereafter have the right, for a period of nine (9) months, to enter into a lease with the third party prospect upon the terms set forth in Landlord's Offer.

32. **NOTICES**. Any notice required or permitted under this Lease shall be in writing, sent by a reputable private carrier of overnight mail or mailed by United States Certified Mail, Return Receipt Requested, postage prepaid, in each case addressed as follows:

If to Landlord:
Employers Mutual Casualty Company
Attention: Facilities
717 Mulberry Street
Des Moines, IA 50309
Contact: Cindy McCauley

with a copy to: Employers Mutual Casualty Company
Legal Department
717 Mulberry Street
Des Moines, Iowa 50309
Attention: General Counsel

If to Tenant: Voya Services Company
One Orange Way (C4-N)
Windsor, Connecticut 06095
Attn: Corporate Real Estate

with a copy to: William R. Crowe
Rogin Nassau LLC
185 Asylum Street, CityPlace I, 22nd Floor
Hartford, CT 06103

Either Landlord or Tenant may, by notice to the other, change the address(es) to which notices are to be sent. All notices shall be deemed effective upon receipt or upon refusal to accept delivery.

33. **COMPETITORS** Subject to applicable Laws, Landlord shall not lease space in the Building to, nor allow to be used by, any law enforcement agencies or other government agencies or to any Competitors. As used herein, "Competitors" shall mean T Rowe Price, Vanguard, TIAA-CREF, Principal Financial Group, MetLife, Prudential, Lincoln, Financial, AIG and any subsidiary or affiliate thereof, and their respective successors. Landlord's breach of this Paragraph 32 shall be an event of default hereunder pursuant to Paragraph 17. Upon Landlord's breach of this Paragraph 32, in addition to the rights and remedies available at law or in equity or specifically set forth herein, Tenant shall have the right to terminate this Lease upon not less than thirty (30) days' written notice to Landlord, and if such violation is not corrected within such thirty (30) days, this Lease shall terminate in which event Landlord shall pay to Tenant upon demand Tenant's relocation costs on thirty (30) days' prior notice. Notwithstanding the forgoing, if Tenant has sublet all or a portion of the Premises to a non-affiliate such that the balance of the Premises not subject to any such sublease(s) comprises less than one floor, Landlord may lease space in the Building to a Competitor, provided that Landlord may not lease space to a Competitor on the floor so retained by Tenant.

34. **MISCELLANEOUS**.

(a) Within fourteen (14) days following any transfer by Landlord of its ownership interest in the Property, Landlord shall provide Tenant with written notice of such transfer of the Property and the name and address of the successor Landlord to whom Tenant should send future rent payments and notices (the "Transfer Notice"). In the event that a predecessor Landlord fails to provide the Transfer Notice, (a) Tenant shall not be liable to any successor Landlord for any rent payments paid to a predecessor Landlord; and (b) any successor Landlord shall be bound by any notice sent to a predecessor Landlord.

(b) The captions appearing within the body of this Lease have been inserted as a matter of convenience and for reference only and in no way define, limit or enlarge the scope of meaning of this Lease or any provision of this Lease.

(c) This Lease may be executed in several counterparts, all of which constitute one and the same instrument.

(d) This Lease shall be governed by and construed in accordance with the laws of the state or commonwealth in which the Premises are located.

(e) The language of this Lease shall be construed according to its normal and usual meaning and not strictly for or against either Landlord or Tenant. The rule of construction which allows a court to construe a document more strictly against its author shall not govern the interpretation of this Lease.

(f) Each party represents to the other that (i) it has not dealt with any broker, agent or other intermediary who is or may be entitled to be paid a broker commission or finder's fee in connection with this Lease, except for Cushman & Wakefield and CBRE-Hubbell ("Tenant's Broker") and Iowa Realty "Landlord's Broker"); and (ii) there are no claims for brokerage commissions or finder's fees in connection with this Lease, except as to Landlord's Broker and Tenant's Broker. Landlord acknowledges that any commission or finder's fee due to the Broker(s) in connection with this Lease shall be the sole obligation of Landlord. Each party agrees to indemnify the other and hold it harmless from all liabilities arising from breach of the representations stated above. The representations and obligations contained in this Subparagraph 33(f) shall survive the termination of this Lease.

(g) This Lease shall be null and void if not signed by Landlord and returned to Tenant within thirty (30) days of the day and year first above written. No agreement shall be binding upon Tenant unless signed by the authorized representative of Tenant.

(h) In no event shall Tenant be obligated at any time during the Term or any extension thereof to relocate from the Premises to substitute space.

(i) No right or remedy herein conferred upon or reserved to either party is intended to be exclusive of any other right or remedy, and every right and remedy shall be cumulative and in addition to any other right or remedy given by this Lease or now or hereafter existing at law or in equity. The failure of either party to insist upon the strict performance of any obligation shall not be deemed a waiver thereof.

(j) If either party shall at any time be in default under this Lease and if the non-defaulting party shall institute an action or summary proceeding against the defaulting party based upon such default, then the losing party will reimburse the prevailing party for its reasonable attorneys' fees and disbursements.

(k) If any provision of this Lease, or its application to any situation, shall be invalid or unenforceable to any extent, the remainder of this Lease, or the application thereof to situations other than as to which it is invalid or unenforceable, shall not be affected thereby, and every provision of this Lease shall be valid and enforceable to the fullest extent permitted by law.

(li) This Lease constitutes the entire agreement between the parties and may be amended only by written agreement of the parties. No representations, inducements, promises or agreements, oral or otherwise, between Landlord and Tenant or any of their respective brokers, employees or agents, not embodied herein, shall be of any force or effect.

(m) This Lease shall be binding upon and shall inure to the benefit of the parties hereto, their heirs, executors, administrators, successors and permitted assigns.

(n) Landlord and Tenant agree that in fulfilling all terms and conditions of this Lease, time is of the essence.

35. **GENERATOR**.

(a) During the Term, as the same may be extended, Landlord shall install a new 750kW emergency generator by November 15, 2017, and thereafter maintain in operable condition during the Term, test and monitor an emergency generator pursuant to mutually agreeable specifications (the "Emergency Generator") in accordance with a NFPA 101 standard. Landlord shall provide Tenant with copies of any monitoring and / or testing results upon reasonable request at reasonable intervals. Landlord acknowledges that Tenant shall be permitted to utilize up to 200 kW of the capacity of the Emergency Generator for its needs, but shall not exceed that capability without Landlord's prior approval and coordination. Landlord will monitor Tenant's use through a demand meter. Landlord may utilize a portion of the capacity of the Emergency Generator for the needs of the Building (i.e. life safety), provided however, that no such use shall overburden the Emergency Generator or interfere with Tenant's utilization of the Emergency Generator. The intent of design is to provide enough generator capacity to support Tenant load and Fire Life Safety requirements.

(b) Tenant acknowledges that, provided that no other tenants of the Building have the right to utilize the Emergency Generator, twenty-seven percent (27%) of the Emergency Generator's operation, maintenance and repair costs shall be allocated to Tenant as a Building Operating Expense. Tenant will pay its pro rata share of the remaining seventy-three percent (73%) of the Emergency Generator's operation, maintenance and repair costs associated with Building Fire Life Safety requirements in accordance with the provisions of Section 7. If Landlord allocates Emergency Generator capacity to other tenants, then Tenant's pro rata share will be adjusted accordingly. Notwithstanding the foregoing, Tenant shall always be allocated a minimum of 200kW.

(c) Costs allocated between Tenant and Landlord will be for Emergency Generator design, acquisition and installation including distribution panel(s) for Tenant's transfer switches, if necessary (assuming the Emergency Generator infrastructure is not duplicative with the infrastructure already supported in the Building), it being understood and agreed that Tenant transfer switch(s),

distribution panels, feeders and branch circuits, if required, will be Tenant's sole cost and expense and Tenant will not be allocated any of Landlord's cost of transfer switches, distribution panels, feeders and branch circuits, or distribution panels solely used by Landlord except for one feeder breaker in Landlord's Emergency Distribution Panel. Allocated costs will also include cost of load management system to shed Tenant's load in order to maintain fire/life safety requirements if required by City of Des Moines or MidAmerican Energy Company. Notwithstanding the foregoing, Tenant's allocated costs with respect to the design, acquisition and installation of the Emergency Generator shall not exceed $200,000.00. Tenant agrees to reimburse Landlord for all costs to acquire and install the Emergency Generator based on the formula below, based on the expected life of the generator (which life shall be no less than fifteen (15) years) prorated to Tenant's lease term as may be extended and prorated to Tenant's requirements versus the Building requirements. By way of example only, Tenant Emergency Generator use requirements are 200kW and the Building Emergency Generator capacity is 750kW, Tenant's proportionate use of the Emergency Generator is calculated as a fraction, the numerator of which is Tenant Emergency Generator requirements and the denominator of which will be the Building Emergency Generator capacity (200kW/750kW = 0.27). Therefore, in this example, Tenant's proportionate use of the generator capacity is 27%. The amortized cost of the generator shall be calculated by a fraction, the numerator of which shall be the cost of the Emergency Generator, which we will say by way of example is $1,000,000.00, and the denominator of which is the estimated life of the Emergency Generator, which we will say is 15 years ($1,000,000.00/15 years = $66,700.00). Therefore, the total Emergency Generator amortization in this example equals $66,700.00 per year for total Emergency Generator amortization. Finally, Tenant's annual share would be determined by multiplying Tenant's proportionate use of the Emergency Generator by the generator amortization (27%*$66,700.00 = $18,000.00) equaling, in this example, a total share of $18,000.00 owed by Tenant.

(d) Landlord does hereby grant Tenant the right to and through building chases and electrical spaces and other spaces as may be mutually agreed upon to route appropriate emergency power feeders together with distribution panels, transfer switches and associated generator and transfer switch control wiring to Tenant's Premises.

(e) Landlord shall conduct all required Emergency Generator testing on weekends, outside of normal Building hours and upon prior notice to, and coordination with Tenant, so as not to disrupt Tenant's business operations. Landlord shall not conduct tests of the Emergency Generator without prior coordination with Tenant. Any testing required of Tenant's emergency system, including transfer switches, will be conducted by Landlord with Tenant prior coordination and approval. Tenant shall not have access to the Emergency Generator at any time unless accompanied by Landlord, which escort shall be reasonably provided upon request.

36. **ATTACHMENTS**. The following exhibits form a part of this Lease and were attached before this Lease was signed by the parties:

Exhibits:

A-1 - Legal Description
A-2 - Site Plan
A-3 - Parking Facility
B - Floor Plan of Premises

ingCExpenses and Real Estate Taxes for the Base Year

D - Current Rules and Regulations

E - Janitorial Services

F - Conference Center

G - Subordination, Non-Disturbance and Attornment Agreement

H-1 - Test Fit

H-2 - Construction Schedule

H-3 - Base Building Work Including Restroom and Elevator Lobby Upgrades

I - Storage Area

IN WITNESS WHEREOF, Landlord and Tenant have signed this Lease as of the day and year first above written.

EXHIBIT A-1

LEGAL DESCRIPTION

Parcel 1: Garage Parcel

All of the following described real estate in the City of Des Moines, Polk County, Iowa, that lies below Elevation 36.20, City Datum (First Floor Level):

All of Lots 3, 4, 5, and 6, and the Vacated 16.5 foot wide North-South Alley lying West of and adjoining said Lots 5 and 6, all in Block 12, in the ORIGINAL TOWN OF FORT DES MOINES, an Official Plat, now included in and forming a part of the City of Des Moines, Polk County, Iowa,

AND a triangular portion of vacated Sixth Avenue Right-of-Way described as follows:

Beginning at the Southeast corner of Lot 5 in Block 12 in the ORIGINAL TOWN OF FORT DES MOINES, an Official Plat, now included in and forming a part of the City of Des Moines, Polk County, Iowa, thence Northerly, along the Easterly line of said Lot 5, a distance of 57.82 feet, thence Southerly, a distance of 57.82 feet to a point that is 0.3533 feet East of the Southeast corner of said Lot 5, thence Westerly 0.3533 feet to the Point of Beginning.

AND EXCEPTING THEREFROM the following described triangular shaped portion of the above real estate:

Commencing at the Southeast corner of Lot 5 in Block 12, in the ORIGINAL TOWN OF FORT DES MOINES, an Official Plat, now included in and forming a part of the City of Des Moines, Polk County, Iowa, thence Northerly along the Easterly line of said Lot 5, a distance of 57.82 feet, to the Point of Beginning, thence Northerly, a distance of 75.29 feet, to the Northeast corner of Lot 6, Block 12, in the ORIGINAL TOWN OF FORT DES MOINES, an Official Plat, all now included in and forming a part of the City of Des Moines, Polk County, Iowa; thence Westerly along the Northerly line of said Lot 6, a distance of 0.46 feet; thence Southerly a distance of 75.29 feet, to the Point of Beginning.

Parcel 2: Office Tower Parcel

All of the following described real estate in the City of Des Moines, Polk County, Iowa, that lies above Elevation 69.82, City Datum (Third Floor Level):

The West 179.0 feet, EXCEPT the North 39.0 feet of the East 25.0 feet thereof; AND EXCEPT the South 20.0 feet of the East 25.0 feet thereof, of the following described real estate:

All of Lots 3, 4, 5, and 6, and the Vacated 16.5 foot wide North-South Alley lying West of and adjoining said Lots 5 and 6, all in Block 12, in the ORIGINAL TOWN OF FORT DES MOINES, an Official Plat, now included in and forming a part of the City of Des Moines, Polk County, Iowa.

Parcel 3: First Floor Office Building Entrance and Elevator Lobby.

All that part of the following described real estate that lies above Elevation 36.20, City Datum (First Floor Level) and below Elevation 54.82, City Datum (Second Floor Level):

Commencing at the S.W. Corner of Lot 4, Block 12, in the ORIGINAL TOWN OF FORT DES MOINES, an Official Plat, now included in and forming a part of the City of Des Moines, Polk County, Iowa; thence Easterly, along the Southerly Line of said Lot 4, 62.67 feet, to the Center Line of Column No. 4, and to the Point of Beginning; thence Northerly, at Right Angles to the Southerly Line of said Lot 4, and along the Center Line of said Column Line No. 4, 41.75 feet; thence Westerly, at Right Angles to the preceding course, 1.08 feet; thence Northerly, at Right Angles to the preceding course, 28.83 feet; thence Easterly, at Right Angles to the preceding course, 32.17 feet; thence Southerly, at Right Angles to the preceding course, 28.83 feet; thence Westerly, at Right Angles to the preceding course, 3.08 feet; thence Southerly, at Right Angles to the preceding course and along the Center Line of Column No. 5, 41.75 feet, to a point that is on the Southerly Line of said Lot 4; thence Westerly, at Right Angles to the preceding course, 28.0 feet, to the Point of Beginning.

Parcel 4: Second Floor Office Building Elevator Lobby

All that part of the following described real estate that lies above Elevation 54.82 City Datum (Second Floor Level) and below Elevation 69.82, City Datum (Third Floor Level):

Commencing at the S.W. Corner of Lot 4, Block 12, in the ORIGINAL TOWN OF FORT DES MOINES, an Official Plat, now included in and forming a part of the City of Des Moines, Polk County, Iowa; thence Easterly, along the Southerly Line of said Lot 4, 62.67 feet, to the Center Line of Column No. 4; thence Northerly, at Right Angles to the Southerly Line of said Lot 4, and along the Center Line of said Column Line No. 4, 41.75 feet; thence Westerly, at Right Angles to the preceding course, 1.08 feet, to the Point of Beginning; thence Northerly, at Right Angles to the preceding course, 28.83 feet; thence Easterly, at Right Angles to the preceding course, 32.17 feet; thence Southerly, at Right Angles to the preceding course, 28.83 feet; thence Westerly, at Right Angles to the preceding course, 32.17 feet, to the Point of Beginning.

Parcel 5: Beneficial Easements for Footing Encroachments

Easements for Footing Encroachments on:

All of the underground area lying below Elevation 31.91, City Datum, and above Elevation 20.07, City Datum, and lying within each of the following described areas (except the triangular portion of the following described areas that are located in the triangular portion of the Sixth Avenue Right-of-Way that is excepted from the description of Parcel 1 hereof):

The East 3 feet - 1 inch of Seventh Street Right-of- Way lying west of and adjoining Block 12, in the ORIGINAL TOWN OF FORT DES MOINES, an Official Plat;

The North 3 feet - 1 inch of Walnut Street Right-of- Way lying south of and adjoining said Block 12;

The West 3 feet - 1 inch of Sixth Avenue Right-of-Way lying east of and adjoining said Block 12;

All now included in and forming a part of the City of Des Moines, Polk County, Iowa.

Parcel 6:

Together with the benefits of the declaration of covenants, conditions, restrictions and easements dated as of December 31, 1994, filed January 3, 1995, in book 7137, page 832, as instrument no. 039851, as amended by first amendment to declaration of covenants, conditions, RESTRICTIONS and easements dated June 30, 1997, filed July 1, 1997, in book 7669, page 697.

The terms “north”, “east”, “west”, and “south” used in this Exhibit shall be construed to mean “northerly”, “easterly”, “westerly”, and “southerly,” and vice versa, where the context so requires, by reason of the platting of downtown Des Moines on a southwest to northeast axis.

CURRENT RULES AND REGULATIONS

The following rules and regulations shall apply to the Premises, the Building, the parking garage, the Land and the appurtenances thereto:

1. The Building shall be maintained as a smoke-free and weapon free environment.

2. Sidewalks, doorways, vestibules, halls, stairways, and other similar areas shall not be obstructed by Tenant or used by any tenant for purposes other than ingress and egress to and from their respective leased premises and for going from one part to another in the Building.

3. No signs, advertisements or notices shall be painted or affixed on or to any windows, doors, or other part of the Building, outside of the Premises, without the prior written consent of the Landlord.

4. Plumbing, fixtures and appliances shall be used only for the purposes for which designed. No sweepings, rubbish, rags or other unsuitable objects shall be thrown or deposited therein. Expenses attributable to misuse of the plumbing, fixtures, or appliances by Tenant or its agents, employees or invitees shall be paid by Tenant.

5. Landlord shall provide all manual door locks and/or electronic card access locks in Tenant's Premises. Landlord shall furnish to each tenant a reasonable number of keys and access cards for the leased premises and no tenant shall make duplicates thereof.

6. Except to hang ordinary wall hangings and pictures, no nails, hooks or screws shall be driven or inserted in any part of the Building, other than the Premises, except by the Building maintenance personnel, nor shall any part of the Building be defaced by Tenant.

7. No awnings or other projections shall be attached to the outside walls of the Building. No curtains, blinds, shades or screens shall be attached to or hung in, or used in connection with, any window or door of the Premises, without the prior written consent of Landlord. Such curtains, blinds, shades or screens must be of a quality, type, design and color, and attached in the manner, approved by Landlord, and if same are provided by Landlord, shall not be removed. Tenants shall not put down any floor coverings in the Premises without the Landlord's prior approval of the manner and method of applying such floor coverings. Any wallpaper or vinyl fabric material which Tenant may install on painted walls shall be applied with a strippable

adhesive. The use of non-strippable adhesives will cause damage to the walls when materials are removed, and repairs made necessary thereby shall be made by Landlord at Tenant's expense. The sashes, sash doors, windows, glass lights, and any lights or skylights that reflect or admit light into the halls or other places of the Building shall not be covered or obstructed.

8. Intentionally Deleted.

9. Movement in or out of the Building of furniture or office equipment, or dispatch or receipt of any bulky materials or merchandise by Tenant which require the use of elevators or stairways, or movement through the Building entrances or lobby shall be conducted under Landlord's supervision at such times and in such a manner as Landlord may reasonably require. Each tenant assumes all liability for damages to articles moved or injury to persons engaged or not engaged in such movement, including equipment, property and personnel of Landlord if damaged or injured as a result of acts in connection with such movement.

10. Landlord may reasonably prescribe weight limitations and determine locations for safes and other heavy equipment such as high density files or library which shall be placed in the Building so as to distribute weight in a manner acceptable to Landlords. If structural calculations are required from a licensed structural engineer, the cost will pass on to Tenant. All damages to the Building caused by the installation or removal of any property of a tenant or caused by tenant's property while in the Building shall be repaired at tenant's reasonable expense.

11. No birds or animals (other than service animals) shall be brought into or kept in or about Tenant's Premises, except otherwise expressly provided under the permitted use.

12. No portion of the Tenant's Premises shall be used or occupied as sleeping or lodging quarters.

13. Tenants shall cooperate with Landlord's efforts to keep its Premises neat and clean. Except for employees of Tenant, Tenant shall not engage any person for the purpose of such cleaning. To ensure orderly operation of the Building, no ice, mineral or other water, towels, newspaper, etc., shall be delivered to any premises except by persons given prior consent by Landlord.

14. Tenant shall not make or permit any objectionable or unpleasant noises or odors in the Building or otherwise unreasonably interfere in any way with other Tenants.

15. No portable heaters and fans or machinery/equipment, other than standard office computers, copy machines and the like, shall be operated by any Tenant on the Premises without Landlord's prior written consent; such consent shall not be unreasonably withheld. Tenant shall not use or keep in the Building any flammable, explosive or hazardous materials of any kind other than properly handled materials used in the ordinary course of Tenant's business.

16. Except for Landlord's negligence or intentional misconduct, Landlord or its agents will not be responsible for lost or stolen property, money or jewelry from Tenant's Premises or from common areas regardless of whether such loss occurs when the area is locked against entry or not.

17. No vending or dispensing machines of any kind may be maintained in the Premises without the prior written consent of Landlord, which shall not be unreasonably withheld.

18. Mail Delivery shall be handled by Tenant and post office directly. Any other deliveries and/or pickup of goods shall be handled by Tenant and servicing carrier directly. Delivery and use of loading zone shall be reasonably coordinated with and approved by Landlord.

19. The Building cafeteria at 700 Walnut is not open to anyone other than employees of the Landlord or Tenant unless:

a. Guests are accompanied by an employee of the Landlord or of Tenant with an active access card displayed for the cafeteria cashier and are wearing a guest badge; or

b. Special instances or services are designated and arranged by the cafeteria manager with the approval of the Landlord.

20. No food shall be distributed from Tenant's office to third parties.

21. Tenant shall comply with all skywalk ordinances, rules and regulations.

22. Parking on level P1 of the building, as provided in the Lease, is assigned to the Tenant, not to an individual employee of the Tenant. Safety violations by an employee of a Tenant will be reported to the Tenant so that the violation can be addressed with the employee. If such violations continue after two written requests to cease such unsafe conduct, the employee shall be restricted from parking on level P1. This same rule applies to all individuals parking on level P1 of the building, whether employed by the Landlord or Tenant.

23. No radio, television, or similar amplified device or aerial attached thereto shall be installed outside the Premises without first obtaining in each instance the Landlord's written consent in Landlord's sole discretion; and, if consent shall be given, no such device shall be used in a manner so as to be heard outside the Premises.

24. Tenant shall allow access to rodent, pest and vermin exterminator contractor at such intervals as may be reasonably required by Landlord.

25. All mechanical equipment and machinery will be kept free of noise and vibration which may be transmitted to any part of the Building beyond the confines of the Premises.

26. Landlord agrees to install and maintain at Landlord's expense at a readily available location in the Premises, an ABC type or equal all-purpose, hand-operated fire extinguisher containing a minimum capacity of 2-1/2 lbs., or such other capacity as may be required by the Landlord's insurance company or the local Fire Department.

27. Tenant shall not install, or suffer or permit to be installed or placed, exterior fascia partitions, decorations, alterations, or improvements or the like over, upon or under the sprinkler heads within the Premises; and the sprinkler heads shall remain exposed at all times.

28. Tenant shall not use or suffer or permit the use of any parts or portions of the Premises that are visible to the exterior of the office building for the "quick type" services of food, beverages, ice cream, popcorn, candy, gum or any other edible (unless Landlord expressly allows these items).

29. Landlord reserves the right to, but shall not be held obligated to, exclude or reject from the Building any and all solicitors, canvassers, peddlers and any other persons conducting themselves in such manner as, in the reasonable judgment of Landlord, constitutes an annoyance to any of the merchants or tenants in the Building or an interference with operation of the Building or who are otherwise undesirable.

30. Tenant shall not request employees of the Building to perform any work or to do anything outside their regular duties unless consent is obtained from the Director of Facilities.

31. Tenant shall not use any open flame or use live holiday wreaths or trees.

32. Tenant shall give prompt notice to the office of the building manager, Cindy McCauley, having an address of 717 Mulberry Street, Des Moines, Iowa 50309-3872,

of any damage to or defects in plumbing, electrical fixtures or heating and cooling equipment. Liquids or other materials or substances which will cause injury to the plumbing, shall not be put into the lavatories, water closets or other plumbing fixtures by Tenant, its agents, employees or invitees, and damages resulting to such fixture or appliances from misuse by Tenant or Tenant's agents, employees or invitees shall be paid by Tenant, and Landlord shall not in any case be liable therefore.

33. Landlord reserves the right to rescind or make any reasonable changes of these rules and regulations and to make such other further rules and regulations not inconsistent with the terms and conditions of the Lease as in its judgment shall from time to time be needed for safety, protection, care, regulatory compliance and cleanliness of the Building, the operation thereof, the preservation of good order therein and the protection and comfort of the tenants and their agents, employees and invitees, which reasonable rules and regulations, when made and 30 days written notice thereof is given to a tenant, shall be binding upon all tenants of the building in like manner as if originally herein prescribed.

34. In the event of severe weather, it is Tenant's responsibility to prepare an evacuation plan for tenant suites and review with its employees on an annual basis. Tenant will provide Landlord a copy of said plan. Tenant shall have representation at the Landlord's annual building emergency training.

EXHIBIT E

JANITORIAL SERVICES

Building surfaces and furnishings shall be maintained in first class condition, free of odors, spots, stains, visible soil, dust, dirt, scuff marks, and dirt/chemical build-up. Fixtures that are not in proper working order (e.g. lights, towel/toilet tissue dispensers, toilets, etc.) shall receive proper maintenance. Specifically, the following services shall be provided by Landlord:

OFFICES

A. TWICE DAILY

1. Day Porter services for pantries

B. ILY

1. Empty wastebaskets and replace liners as needed.
2. Deleted.
3. g furnishings including desks, chairs, and bases, partitions, telephones, tables, filing cabinets, bookcases and shelves.
4. Spot clean desk tops.
5. Clean counter tops.
6. Clean and sanitize drinking fountains.
7. Vacuum carpet.
8. Spot clean carpet and spot mop any hard surface floors with spills.
9. Spot clean door.
10. Dust mop all hard surfaced floors.
11. Sweep all stairways.
12. Remove trash and recyclable materials.
13. Wet wipe all tables in eating areas.

C. EKLY

1. l vertical surfaces (floor to 6') including permanent fixtures/decorations attached to walls.
2. Clean entire desk tops (where possible).
3. ge prints from doors, frames, light switches, kick and push plates, handles and telephones.
4. Spot clean interior window glass.
5. Wash tile floors.

D. NTHLY

1. Dust venetian blinds.
2. Remove cobwebs from ceiling areas.
3. Dust air grilles and light fixtures.
4. Vacuum upholstered furniture.
5. Polish and buss (no wax) resilient floors.
6. t in high traffic areas (entrances, lobbies, lunch rooms, main traffic aisles) with dry chemical and/or extraction method).

ARTERLY

1. Clean inside windows and partition glass.
2. Polish furniture.
3. High dust surfaces above 6'.
4. t in moderate traffic areas (interior aisles, private offices, conference rooms) with a dry chemical and/or extraction method.
5. Wash exterior windows.

NUALLY

1. t in light traffic areas (general office) with a dry chemical and/or extraction method.

NECESSARY

1. Replace light bulbs.

LAVATORIES

VICE DAILY

1. Refill all dispensers.
2. Remove all wastepaper and refuse.
3. Day Porter service

GHTLY

1. Sweep floors.
2. Wash floors.
3. es (toilets, dispensers, sinks, pipes) with disinfectant.
4. Clean and polish all metal and mirrors.
5. Clean partitions.

ARTERLY

1. Completely wash partitions/walls.
2. Machine scrub floor.

SUBORDINATION, NON-DISTURBANCE AND ATTORNMENT AGREEMENT

THIS AGREEMENT dated the _________ day of _______________, 20_____, between _______________, ("Mortgagee"), and _______________, ("Tenant").

W I T N E S S E T H:

Tenant has entered into a certain lease (the "Lease") dated __________ with ____________________ as lessor ("Landlord"), covering certain premises known as _______________ and located in ____________________ (the "Premises"); and

Mortgagee has agreed to make a mortgage loan in the amount of _______________ ("the Mortgage") to the Landlord, secured by the Premises, and the parties wish to set forth their agreement herein.

NOW, THEREFORE, in consideration of the Premises and the sum of One Dollar ($1.00) by each party in hand paid to the other, the receipt of which is hereby acknowledged, the parties hereby agree as follows:

1. The Lease is and shall be subject and subordinate to the Mortgage insofar as it affects the real property of which the Premises form a part, and to all renewals, modifications, consolidations, replacements and extensions thereof, to the full extent of the principal sum secured by the Mortgage and interest on that principal sum.

2. Tenant agrees that it will attorn to and recognize any purchaser at a foreclosure sale under the Mortgage, any transferee who acquires the Premises by deed in lieu of foreclosure, and the successors and assigns of such purchaser or transferee, as its landlord for the unexpired balance (and any extensions, if exercised) of the term of the Lease upon the same terms and conditions set forth in the Lease.

3. Mortgagee, for itself and its successors and assigns, covenants and agrees that notwithstanding any default under the Mortgage and so long as Tenant is not in default under the Lease beyond any applicable cure period, Mortgagee shall not, in the exercise of any of its rights under the Mortgage, disturb or interfere with Tenant, deprive Tenant of its possession or its right to possession of the Premises (or any part thereof) under the Lease, deprive Tenant of any right or privilege granted to Tenant or inuring to the benefit of Tenant under the Lease, or join Tenant in summary or foreclosure proceedings.

4. If Mortgagee succeeds to the interest of Landlord under the Lease, Mortgagee shall not be:

(a) liable for any Landlord default of any prior landlord (including Landlord), provided that Mortgagee will be subject to offset and any and all other Tenant remedies under the Lease with respect to those Landlord defaults for which Tenant has delivered a prior written notice to Mortgagee in accordance with the terms of this Agreement;

(b) bound by any rent or additional rent which Tenant might have paid for more than the current month to any prior landlord (including Landlord) unless the same is transferred to Mortgagee; or

(c) bound by any amendment or modification of the Lease which affects the rent, term or any other material economic provision of the Lease, unless such amendment or modification has been approved by Mortgagee.

5. Tenant agrees to give Mortgagee, by certified mail, a copy of any notice of Landlord default served upon Landlord, provided that prior to such notice, Tenant has been notified in writing of the address of Mortgagee. Tenant agrees that if Landlord shall have failed to cure such Landlord default within the period provided for in the Lease, then Mortgagee shall have an additional thirty (30) days beyond that period within which to cure such Landlord default; provided that such extension shall not apply to Tenant's abatement rights and Additional Remedies described in Subparagraphs 17(b) and 17(c).

6. This Agreement shall be binding upon and shall inure to the benefit of the parties hereto, and their successors and assigns.

IN WITNESS WHEREOF, the parties hereto have entered into this Agreement as of the day and year first above written.

BASE BUILDING WORK
INCLUDING RESTROOM AND ELEVATOR LOBBY UPGRADES

DESIGN / CONSTRUCTION RESPONSIBILITIES BY TENANT AND LANDLORD

Landlord Responsibilities Design and Construction of the following.
Building Core
Building Standard Elevator Lobby
Building Standard Restrooms, Drinking Fountain, and Janitor Closet
Office, Conference, Etc.
Demolition of existing
Building Standard Ceiling and Grid
Building Standard Window Blinds

Design and install Variable Air Volume units, Ductwork, Diffusers and Ductwork

Building Automation System controls for all HVAC zones
Each typical open office or general office zone to be sized to 1,500-2,000 square feet. Offices should be configured to have no more than 4-5 typical 150 square foot offices per zone. Other rooms, including large conference and pantries should have individual zones. Other smaller "like use" rooms with a similar HVAC profile (i.e. air flow/temperature balance) may be grouped on a common zone where practical.
The following HVAC upgrades will be made by Landlord:
Removing inlet vanes at the air handling units.
Replacing fan motors.
Installing variable frequency drives to allow for varying airflow.
Replacing VAV boxes and electric reheat coils with new.
Electric reheat coils upgraded to SCR type control from staged type.
Replacing all VAV controls with wireless type (Johnson Controls). All controls will be Direct Digital Control.
Making sure the openings above the ceiling are adequate to allow smoke to travel to the two smoke collection points on each floor for evacuation out of the building in the event of a fire. Prior to occupancy on each floor, the smoke evacuation system is tested and a report submitted to the City.
Intent of the design is to meet first class HVAC design standards for commercial office space.

Building Standard 2x2 LED Lighting and Open Plan Office Lighting Controls

Normal Power Electrical Panels

Emergency Power required by Building Code (Egress Lighting, Stairwell Pressurization, etc.)

Building Standard Security Systems
Building Standard Fire Sprinklers, Fire Detection,
Design and Construction of the following:
Difference in cost from Building Standard

Tenant Responsibilities
Building Core

Office, Conference, Etc.
Difference in cost from Building Standard for Ceiling, Lighting, Window Sills and Shades. Landlord to reimburse Tenant for cost associated with the design of the reflective ceiling plan design

Wall construction of partial height, ceiling height or above ceiling height
Doors and Hardware
Floor finishes and required floor preparation
Glycol System connections

Plumbing outside existing Restrooms, Janitor and Drinking Fountain

Power Distribution to all receptacles and other loads beyond building standard
Emergency Power beyond building standard (subject to allocations pursuant to Section 35). Tenant shall be responsible for its Tenant specific transfer switches and UPS costs, including associated maintenance obligations.
Circuiting
Uninterruptable Power
Lighting Control for offices, conference rooms, separate spaces
Telephone/Data distribution to floor locations
Telephone/Data riser through building
Audio Visual
Sound Masking

Security Systems required by Tenant

DEFINITION OF TENANT IMPROVEMENTS

Relative to the preparation of the Premises, the following items represent those Tenant Improvement cost items to which the TI allowance shall apply (i.e., items that are Tenant's cost in the preparation of space):

TENANT COSTS (labor & materials)

Category	Ref	Item	Yes	No
SOFT, MISC.	1	Permitting, inspections and certificates of occupancy.	X	
	2	Architectural and engineering relating to the Premises and applicable Base Building system integration. If Landlord's architect is selected.		X
	3	Permit expediting, if necessary.	X	
	4	Contractor overhead, profit & general conditions.	X	
FINISHES	5	Floor finishes and base boards.	X	
	6	Interior partition finishes.	X	
	7	Door finishing.	X	
	8	Door frame painting.	X	
DOORS	9	Interior doors, frames & hardware.	X	
CEILING	10	Ceiling tiles labor and materials (LL to provide building specs)		X
	11	Ceiling grid adjustments to conform to Tenant's plans. (LL to provide building specs)		X
PARTITIONS	12	Interior partitions (including insulation).	X	
	13	½ of demising & corridor walls (including insulation).		X
HVAC*	14	HVAC ductwork, and VAV units and diffuser adjustments to conform to Tenant's plans.		X
Per building standard calcs.	15	HVAC air balancing.		X
	16	Modifications and adjustments to HVAC controls to adjust to Tenant's plans.		X
	17	Intentionally deleted.		
	18	Connection interface for Tenant supplementary cooling requirements.		X
ELECTRICAL	19	Light fixtures and lenses (labor and materials) (LL to provide building specs for LED lights)		X
	20	Light fixtures and lenses in excess of 1 per 80 RSF of space leased. (LL to provide building specs for LED lights)		X
	21	Light switches (new only).	X	
	22	Live electrical outlets and related conduit (new only).	X	
	23	Telephone receptacles (new only) and related conduit.	X	
PLUMBING	24	Relocation of sprinkler heads (if applicable) to conform to Tenant's plans.		X
	25	Plumbing work (new) beyond Base Building stub-outs.	X	
MILLWORK	26	Millwork & casework (new only).	X	

Base Building costs outlined on ensuing page.

Cost items (Base Building oriented) incurred by Landlord during built-out process:

LANDLORD COSTS (if applicable during the build-out process)

Category	Ref	Item	Yes	No
MISC	26	All existing or pre-existing improvements (only labor for any adjustment thereto to be Tenant's cost).	X	
CEILING	27	Main ceiling grid labor and materials (24"x24" concealed spine); all ceiling tiles stock-piled in the Premises.	X	
CORE	28	All exterior window treatment.	X	
	29	Finished common areas including lobbies, corridors, toilet areas, elevators, elevator rooms, janitor closets, electric/mechanical/plumbing closets, fire stairwells, all exterior work - all such improvements to meet ADA compliance.	X	
	30	Overall ADA compliance for common areas and Base Building components (including all rest rooms).	X	
HVAC	31	HVAC capacity, including fresh air per ASHRAE Standard 62-89 criteria, allowing for a total average of 6 watts per USF for lighting and general utility power, with Tenant occupancy averaging 1 person per 130 USF and so long as Tenant operates and installs equipment with a connected load of no more than 4 watts per USF of space leased. Landlord will provide building standard - Please define building standard: __	X	
	32	All medium and large velocity HVAC ductwork including items specified in 14-18 above.	X	
FIRE, LIFE SAFETY	33	Automatic fire protection system (concealed sprinkler heads) in conformance with NFPA 13 and local requirements.	X	
	34	Fire/life safety alarm system in conformance with NFPA 72, NFPA 101, ADA & local requirements.	X	
	35	Exit and emergency light fixtures, including additional fire alarm devices caused by Tenant's Work (devices only, no system improvements) to accommodate Tenant configuration. Landlord to provide all floors fireproofed and with appropriate fire stopping.		X
STRUCTURAL	36	Live floor loading of 70 pounds per RSF leased, which includes the weight of partitions.	X	
	37	Floor slabs with smooth surface ready for carpet or tile installation, leveled to a tolerance of 1/8" of a 10' radius (non-cumulative). Maximum deviation not to exceed 1.5" between any two points on the floor. Landlord shall review existing floor surfaces. If floor surfaces do not meet commercially reasonable standards then Landlord shall repair at Landlord's sole cost. The intent of this section is not to require Landlord to resurface the floors entirely but to ensure floors meet commercially reasonable standards.	X	
PARTITIONS	38	For 1st generation space: Interior surfaces of exterior walls and support columns finished in drywall (taped, blocked and skinned).	N/A	
	39	All exterior wall and slab insulation.	N/A	
ELECTRICAL	40	. Landlord will provide building standard. Reference Section 41 of RFP document above.	X	
	41	All electric and telecommunication risers serving Base Building electrical closets.	X	
PLUMBING	42	For 1st generation space: Plumbing connections "roughed in" and available for vent and hot/cold water at wet columns.	N/A	

ENVIRONMENTAL	43	Any/all Environmental Hazardous Material (EHM) material removal (including asbestos).	X	
DEMOLITION		Premises will be delivered demolished. Columns, core, and exterior walls to be provided sheet rocked and ready to receive paint.	X	
Restroom Upgrades	44	Landlord shall, at Landlord's cost upgrade the restrooms as follows: • Upgrade the counter tops with composite material. • Replace all fixtures with hands-free fixtures (including towel dispenser). • Vinyl wall covering to be consistent with recently upgraded restrooms in the Building	X	
Elevator Lobby Upgrades	45	Landlord shall, at Landlord's sole cost upgrade the elevator lobbies as follows: • Tile floor - LL will provide allowance for standard lobby floor covering, Tenant will pay the upgrade portion for tile. • Landlord will provide fire doors as required by Code. Tenant may provide at its expense (subject to Tenant Improvement Allowance) 2 double-entry wood doors with sidelights in either door or adjacent wall located in the elevator lobbies. • New lighting to building standard • Wall covering to building standard to be approved by Tenant Finish scheduled for the above Landlord's Rest Rooms and Elevator Lobby Upgrades in items 44 & 45 (including allowances as necessary) shall be agreed to prior to lease signing and be confirmed in a lease exhibit.	X

CERTIFICATION

I, David P. Wiland, certify that:

1. I have reviewed this annual report on Form 10-K of Voya Insurance and Annuity Company;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Exhibit 31.2

CERTIFICATION

I, Carolyn M. Johnson, certify that:

1. I have reviewed this annual report on Form 10-K of Voya Insurance and Annuity Company;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
